Year	DE	Title and Abstract
2006		
2006	C31	Berk, Jan Marc, and Gerbert Hebbink. 2006. <i>The anchoring of European inflation expectations</i>. Netherlands Central Bank, Research Department, DNB Working Papers. This paper analyses the usefulness of direct measures of consumers' perceptions and expectations of inflation for monetary policy and investigates the degree to which these variables are anchored. We inter alia seek to explore whether there is a difference in reaction of consumers in countries with more credible central banks and those from countries with less credible central banks. We moreover investigate whether the introduction of euro coins and banknotes in 2002, that can be interpreted as a structural shock, has significantly affected the inflation rate as perceived by consumers. We find that European inflation expectations are relatively robust to sudden changes in inflation or monetary policy surprises, regardless of the credibility of the central bank. The introduction of the euro, however, significantly affected the inflation perception of European consumers.
2006	D58 D60	Dubey, Pradeep, and John Geanakoplos. 2006. <i>Money and Production, and Liquidity Trap</i>. Cowles Foundation, Yale University, Cowles Foundation Discussion Papers: 1574. We prove the existence of monetary equilibrium in a finite horizon economy with production. We also show that if agents expect the monetary authority to significantly decrease the supply of bank money available for short term loans in the future, then the economy will fall into a liquidity trap today.
2006	F37	Bernal, Oscar. 2006. <i>Do interactions between political authorities and central banks influence FX interventions? Evidence from Japan</i>. Universite libre de Bruxelles, Department of Applied Economics (DULBEA), Working Papers DULBEA: 06-03.RS. In the United States, Japan and the Euro Zone, FX interventions are institutionally decided by specific political authorities and implemented by central banks on their behalf. Bearing in mind that these specific political authorities and central banks might not necessarily pursue the same exchange rates objectives, the model proposed in this paper takes account explicitly of this institutional organisation to examine its effects on FX intervention activity. The empirical relevance of our theoretical model is assessed by developing a friction model on the Japanese experience between 1991 and 2004 which reveals how the magnitude of that country's FX interventions is the outcome of the Japanese Ministry of Finance's trade-off between attaining its own exchange rate target and one of the Bank of Japan's.
2006	F59	Vernengo, Matias. 2006. <i>The Political Economy of Monetary Institutions in Brazil: The Limits of the Inflation Targeting Strategy, 1999-2005</i> . University of Utah, Department of Economics, Working Paper Series, Department of Economics, University of Utah. The paper provides a critical analysis of the literature on monetary policy institutions. It presents a critique of the dominant notion of central bank independence, based on the literature on time-inconsistency of monetary policy. An alternative view that emphasizes the role of distributive conflict in establishing monetary policy regimes is developed and used to analyze the Brazilian inflation targeting regime implemented in 1999. The analysis suggests that financial or rentier's interests benefit from the current monetary regime, while manufacturing and worker's interests bear the costs.
2006	G35	CV: White, Eugene N. 2006. "Bubbles and Busts: The 1990s in the Mirror of the 1920s." In <i>The Global Economy in the 1990s: A Long-Run Perspective</i>, ed. Paul W. Rhode and Gianni Toniolo, 193-217. Cambridge and New York: Cambridge University Press.
2006	H25	Mijatovic, Nikola. 2006. "Proracunski prihodki Evropske unije in dobicek Evropske centralne banke. (Budget of the European Union and Gains of the European Central Bank. With English summary.)" <i>Bančni Vestnik</i>, 55(10): 2-6. The budget of the European Union is composed of the following income: a) custom duties that are collected on the imported goods from the non-member states; b) agrarian taxes that are collected on the imported agrarian goods from the non-member states; c) the Union's share of VAT that is collected by the member states (0.5% since 2004); d) the Union's share of NBP of the member states. Though it's being talked of the Union's income, the EU does finance its work and functioning with payments and remittances rendered by the member states on the ground of the national income from VAT, custom duties, and a proportion of the economic strength (NBP) of the member states. As the EU doesn't dispose of its own independently managed sources of income, the appropriateness of the existing and the future system of the EU financing as well as the authority enlargement is being called into question. Introduction of an EU own taxation system is being considered as an acceptable solution. The author elaborates on a proposition according to which gains by the European Central Bank would be appropriated to the EU as a new source of income (tax on ECB income). ECB holds monopoly on currency issuing as the legal means of payment inside the EU.
2006	H25	Kehoe, Patrick, and Varadarajan V. Chari. 2006. <i>Modern Macroeconomics in Practice: How Theory is Shaping Policy</i>. National Bureau of Economic Research, Inc, NBER Working Papers: 12476. Theoretical advances in macroeconomics made in the last three decades have had a major influence on macroeconomic policy analysis. Moreover, over the last several decades, the United States and other countries have undertaken a variety of policy changes that are precisely what macroeconomic theory of the last 30 years suggests. The three key developments that have shaped macroeconomic policy analysis are the Lucas critique of policy evaluation due to Robert Lucas, the time inconsistency critique of discretionary policy due to Finn Kydland and Edward Prescott, and the development of quantitative dynamic stochastic general equilibrium models following Finn Kydland and Edward Prescott.
2006	H54	CV: Holmes, Douglas R., and George E. Marcus. 2006. "Fast Capitalism: Para-ethnography and the Rise of the Symbolic Analyst." In <i>Frontiers of Capital: Ethnographic Reflections on the New Economy</i>, ed. Melissa S. Fisher and Greg Downey, 33-57. Durham and London: Duke University Press.
2006	I12	CV: Sen, Amartya. 2006. "The Challenges of Development." In <i>Central Banks and the Challenge of Development</i>. Bank for International Settlements, 19-26. Basel: Author.
2006	J08	CV: Acocella, Nicola, and Giovanni Di Bartolomeo. 2006. "Europe's Economic Institutions: Stability or Growth Oriented?." In <i>Third International Conference: An Enterprise Odyssey: Integration or Disintegration: Proceedings</i>, ed. Lovorka Galetic, 24-45. Zagreb: University of Zagreb.
2006	J58	Posen, Adam, and Daniel Popov Gould. 2006. <i>Has EMU had any Impact on the Degree of Wage Restraint?</i>. CESifo GmbH, CESifo Working Paper Series: CESifo Working Paper No. 1783. We find in cross-sectional investigations that wage restraint is either unchanged or increased following EMU in the vast majority of countries. This contradicts the predictions of a widely-cited family of models of labor market bargaining. In those, Germany would have been expected to display the greatest decline in wage restraint post-EMU, and we find no indication of such a decline. The time-series evidence on Italy shows a significant increase in wage restraint after eurozone entry. This pattern is consistent with the models that emphasise the gains from monetary credibility. The eurozone increase in wage restraint is matched by the increase seen in the UK and Sweden after adopting inflation targeting, another means to credibility.

Year	DE	Title and Abstract
2006	M48	CV; Gudmundsson, Mar. 2006. "Comments on "Procyclical Financial Behavior: What Can Be Done?"". In <i>Procyclicality of Financial Systems in Asia</i> , ed. Stefan Gerlach and Paul Gruenwald, 161-67. Houndmills, U.K. and New York: Palgrave Macmillan.
2006	P20	Egert, Balazs, and Ronald MacDonald. 2006. <i>Transmission Mechanism in Transition Economies: Surveying the Surveyable</i> . CESifo GmbH, CESifo Working Paper Series: CESifo Working Paper No. 1739. This paper surveys recent advances in the monetary transmission mechanism (MTM). In particular, while laying out the functioning of the separate channels in the MTM, special attention is paid to exploring possible interrelations between different channels through which they may amplify or attenuate each others' impact on prices and the real economy. We take stock of the empirical findings especially as they relate to countries in Central and Eastern Europe, and compare them to results reported for industrialised countries, especially for the euro area. We highlight potential pitfalls in the literature and assess the relative importance and potential development of the different channels.
2006	P20	Coricelli, Fabrizio, Balazs Egert, and Ronald MacDonald. 2006. <i>Monetary Transmission Mechanism in Central & Eastern Europe. Gliding on a Wind of Change</i> . William Davidson Institute at the University of Michigan Stephen M. Ross Business School, William Davidson Institute Working Papers Series: wp850. This paper surveys recent advances in empirical studies of the monetary transmission mechanism (MTM), with special attention to Central and Eastern Europe. In particular, while laying out the functioning of the separate channels in the MTM, it explores possible interrelations between different channels and their impact on prices and the real economy. The empirical findings for Central and Eastern Europe are then briefly compared with results for industrialized countries, especially for the euro area. We highlight potential pitfalls in the literature and assess the relative importance, and potential development, of the different channels, emphasizing the relevant asymmetries between Central and Eastern European countries and the euro area.
2006	P20	Poghosyan, Tigran, and Evzen Kocenda. 2006. <i>Foreign Exchange Risk Premium Determinants: Case of Armenia</i> . William Davidson Institute at the University of Michigan Stephen M. Ross Business School, William Davidson Institute Working Papers Series: wp811. This paper studies foreign exchange risk premium using the uncovered interest rate parity framework in a single country context. The analysis is performed using weekly data on foreign and domestic currency deposits in Armenian banking system. The paper provides the results of the simple tests of uncovered interest parity condition, which indicate that contrary to established view dominating in empirical literature there is a positive correspondence between exchange rate depreciation and interest rate differentials in Armenian deposit market. Furthermore, the paper presents and discusses a systematic positive risk premium required by the economic agents for foreign exchange transactions, which increases over the investment horizon. The two currency affine term structure framework is applied to identify the factors driving the systematic exchange rate risk premium in Armenia. At the end, possible directions for further research are outlined.
2007	A13	Destefanis, S., and M. O. Rizza. 2007. "Central Bank Independence and Democracy: Does Corporatism Matter?" <i>Rivista Internazionale di Scienze Sociali</i> , 115(4): . In this paper, we test the hypothesis that central bank independence is closely correlated to social agreement about decisions on income distribution. Using data from a panel of OECD countries over the period 1972-2002 and controlling for several macroeconomic factors, we find evidence in favour of this hypothesis. When some indexes of corporatism are used to allow for the degree of social agreement on income distribution and its determination, the relationship between inflation and CBI weakens considerably. This evidence is consistent with the mechanism posited in Pittaluga-Cama (2004) according to which society formally endows the central bank with independence in order to safeguard a key principle of democracy, namely that decision-makers should be clearly responsible for their choices and actions.

2007	B10	O'Brien, D. P. 2007. <i>The Development of Monetary Economics: A Modern Perspective on Monetary Controversies</i> , Cheltenham, U.K. and Northampton, Mass.: Elgar. Examines monetary controversies to provide a historical perspective on modern understanding of monetary policy. Discusses Jean Bodin's analysis of inflation; John Law--money and trade considered; the rate of interest--John Locke and his critics; the currency and banking controversy; monetary base control; the lender of last resort concept; Walter Bagehot and stabilization; Thomas Joplin's model--a formal statement; and stability with an inbuilt cycle.
2007	B52	Jakobik, Witold. 2007. "O fundamentalnych zasadach polityki gospodarczej. (On the Fundamental Principles of Economic Policy. With English summary)." <i>Contemporary Economics</i> , 1(2): 21-36. The article contributes to the debate focused on the institutional principles of policies conducted by the fiscal as well as the monetary authorities. The author offers a brief review of the main relations between the aims of macroeconomic policy and the instruments that enable the fulfillment of the former. At the same time specific determinants of the aim-oriented decisions by the central bank or the government are reviewed. Last but not least in the analysis we extensively discuss the dilemma of policy mix coordination and the formal/informal status of the government as well as of the central bank.
2007	B52	Fullwiler, Scott T., and Geoffrey Allen. 2007. "Can the Fed Target Inflation? Toward an Institutional Approach." <i>Journal of Economic Issues</i> , 41(2): 485-94. This paper simulates a simple version of the employer of last resort (ELR) policy in the Fairmodel in order to examine the potential stabilization properties of the policy. First, the ELR policy is simulated within historical business cycles of the U.S. economy, which show that the policy raises capacity utilization while also improving price stability. The program on average "costs" around one percent of GDP. Second, the ELR policy is compared to an interest rate rule, sales tax rule, and transfer rule using stochastic simulation. These latter simulations show that fiscal policy rules can promote macroeconomic stability and can enhance or even surpass the stabilization properties of monetary policy rules. Intuitively, within the stochastic simulations, the stabilization properties of the ELR policy are greater the more efficient the ELR "buffer stock" functions and the more productive the ELR employees are assumed to be.
2007	C63	Oreiro, Jose Luis, and Fabio Hideki Ono. 2007. "Um modelo macrodinamico pos-keynesiano de simulacao. (A Post-Keynesian Macro-dynamic Model of Simulation. With English summary)." <i>Revista de Economia Politica/Brazilian Journal of Political Economy</i> , 27(1): 82-107. The objective of this article is to present the structure and the simulation results of a one-sector macro-dynamic model that embeds some elements of the post-Keynesian theory. The computational simulation of the model replicates some important features of capitalist dynamics as the phenomenon of cyclical growth, the long-run stability of the profit rate and functional distribution of income, the maintenance of idle-capacity in the long-run and the occurrence of a single episode of deep fall in real economic activity, which is in accordance with the rarity character of great crashes in the history of capitalism. Moreover, the simulation results show that a great reduction in inflation rate will be followed by an increase of financial fragility, increasing the likelihood of a great depression. As a policy advice derived from the simulation results, we can state that the Central Bank should never promote big reductions in inflation rate.
2007	D53	Buiter, Willem H. 2007. <i>Lessons from the 2007 Financial Crisis</i> . C.E.P.R. Discussion Papers, CEPR Discussion Papers: 6596. The paper studies the causes of the current financial crisis and considers proposals for mitigation and prevention of future crises. The crisis is was the product of a 'perfect storm' bringing together a number of microeconomic and macroeconomic pathologies. Among

Year	DE	Title and Abstract
		the microeconomic systemic failures were: wanton securitisation, fundamental flaws in the rating agencies' business model, the procyclical behaviour of leverage in much of the financial system and of the Basel capital adequacy requirements, privately rational but socially inefficient disintermediation, and competitive international de-regulation. Proximate local drivers of the specific way in which these problems manifested themselves were regulatory and supervisory failure in the US home loan market. Among the macroeconomic pathologies that contributed to the crisis were, first, excessive global liquidity creation by key central banks and, second, an ex-ante global saving glut, brought about by the entry of a number of high-saving countries (notably China) into the global economy and a global redistribution of wealth and income towards commodity exporters that also had, at least in the short run, high propensities to save. In the UK, failures of the Tripartite financial stability arrangement between the Treasury the Bank of England and the FSA, weaknesses in the Bank of England's liquidity management, regulatory failure of the FSA, an inadequate deposit insurance arrangement and deficient insolvency laws for the banking sector contributed to the financial disarray. Despite this, it may well be possible to minimize the spillovers over from the crisis beyond the financial sectors of the industrial countries and the housing sectors of the US and a few European countries.
2007	D61	Acharya, Viral V., Hyun Song Shin, and Tanju Yorulmazer. 2007. <i>Fire Sales, Foreign Entry and Bank Liquidity</i>. C.E.P.R. Discussion Papers, CEPR Discussion Papers: 6309 Bank liquidity is a crucial determinant of the severity of banking crises. In this paper, we consider the effect of fire sales and foreign entry on banks' ex ante choice of liquid asset holdings, and the ex post resolution of crises. In a setting with limited pledgeability of risky cash flows and differential expertise between banks and outsiders in employing banking assets, the market for assets clears only at fire-sale prices following the onset of a crisis--and outsiders may enter the market if prices fall sufficiently low. While fire sales make it attractive for banks to hold liquid assets, foreign entry reduces this incentive. We exhibit international evidence on foreign entry following crises and on banks' ex ante liquidity choice that are consistent with the predictions of the model. Our framework allows us to address the key welfare question as to when there is too much or too little liquidity on bank balance sheets relative to the socially optimal level.
2007	D61	Acharya, Viral V., Hyun Song Shin, and Tanju Yorulmazer. 2007. <i>Fire-sale FDI</i>. C.E.P.R. Discussion Papers, CEPR Discussion Papers: 6319 Capital flight associated with the onset of a financial crisis in a country is often accompanied by an inflow of capital associated with foreign direct investment (FDI). Our paper provides a theoretical framework for this puzzle, and draws wider conclusions on the welfare effects of foreign takeovers. When fundamentals deteriorate, the return that can be pledged to portfolio investors is limited by the incentive constraints of the managers. Only with direct control by investors can the surplus in the project be unlocked. It is precisely during crises that there is the conjunction of the loss of control by incumbent domestic managers, and the lack of domestic capital to take over failing firms. Foreign investors can take over failing firms and capture the surplus, even though they value the assets less. Our theory is consistent with FDI inflows during financial crises being associated with the acquisition of stakes that grant control, rather than simply being acquisitions of cashflow stakes, and is also consistent with the subsequent 'flipping' of the FDI assets, where the asset is sold to investors with higher valuations once the crisis abates.

2007	F00	Christiano, Lawrence, Roberto Motto, and Massimo Rostagno. 2007. <i>Shocks, Structures or Monetary Policies? The Euro Area and US After 2001</i>. National Bureau of Economic Research, Inc, NBER Working Papers: 13521 The US Federal Reserve cut interest rates more vigorously in the recent recession than the European Central Bank did. By comparison with the Fed, the ECB followed a more measured course of action. We use an estimated dynamic general equilibrium model with financial frictions to show that comparisons based on such simple metrics as the variance of policy rates are misleading. We find that--because there is greater inertia in the ECB's policy rule--the ECB's policy actions actually had a greater stabilizing effect than did those of the Fed. As a consequence, a potentially severe recession turned out to be only a slowdown, and inflation never departed from levels consistent with the ECB's quantitative definition of price stability. Other factors that account for the different economic outcomes in the Euro Area and US include differences in shocks and differences in the degree of wage and price flexibility.
2007	H00	Tella, Rafael Di, and Robert MacCulloch. 2007. <i>Happiness, Contentment and Other Emotions for Central Banks</i>. National Bureau of Economic Research, Inc, NBER Working Papers: 13622 We show that data on satisfaction with life from over 600,000 Europeans are negatively correlated with the unemployment rate and the inflation rate. Our preferred interpretation is that this shows that emotions are affected by macroeconomic fluctuations. Contentment is, at a minimum, one of the important emotions that central banks should focus on. More ambitiously, contentment might be considered one of the components of utility. The results may help central banks understand the tradeoffs that the public is willing to accept in terms of unemployment for inflation, at least in terms of keeping the average level of one particular emotion (contentment) constant. An alternative use of these data is to study the particular channels through which macroeconomics affects emotions. Finally, work in economics on the design of monetary policy makes several assumptions (e.g., a representative agent, a summary measure of emotions akin to utility exists and that individuals only care about income and leisure) that can be used to interpret our results as weights in a social loss function.
2007	H21	Eden, Benjamin. 2007. <i>The Friedman Rule in an Overlapping Generations Model: Social Security in Reverse</i>. Department of Economics, Vanderbilt University, Working Papers: 0717 The welfare gains from adopting a zero nominal interest policy depend on the implementation details. Here I focus on a government loan program that crowds out lending and borrowing and other money substitutes. Since money can be costlessly created the resources spent on creating money substitutes are a "social waste". Moving from an economy with strictly positive nominal interest rate to an economy with zero nominal interest rate will increase consumption by the amount of resources spent on lending and borrowing. But in general welfare will increase by more than that because consumption smoothing is better under zero nominal interest rate.
2007	H51	Gokhale, Jagadeesh. 2007. "Is the Fed Facilitating an Unpleasant Fiscal Arithmetic?" <i>Cato Journal</i>, 27(2): 237-59 Is the United States headed for an unprecedented economic disaster? The fact that prominent economists are posing that question says something about what they may be expecting. For example, in the St. Louis Fed's Review, Kotlikoff (2006) argues that the United States is headed for bankruptcy. Federal expenditure commitments on account of massive government entitlement programs are growing larger and becoming less reversible. The traditional perspective on how significant inconsistencies between outstanding government liabilities and the government's future expected budget balances are resolved suggests that higher inflation could be the mechanism by which those two items are realigned with each other.
2007	H72	Popovici, Dumitru. 2007. "The Treasury of Public Finances Attributions and Responsibilities in the Current Stage." <i>Annals: Economic Science Series: Timisoara</i>, 13(0): 51-57 In a general acceptance, the treasury represents the "financial personification of the state", having the role of a financial intermediary, by means of which the state operates the financial and credit transactions, its activities being strongly connected to the execution of the public budget. By regarding the treasury as a unitary and integrated system it has been possible to achieve an organizational structure that contains well defined activities with attributions, competences, precise responsibilities, with the purpose of ensuring the separation of the public sector's finances in distinctive

2007	I20	Fluch, Manfred. 2007. "Selected Central Banks' Economic and Financial Literacy Programs." <i>Monetary Policy and the Economy</i> , 0(0): 85-104. This study examines the type and extent of information central banks provide to advance economic literacy in general and financial literacy in particular. Some 30 central banks across the world provide financial education products of varying complexity for different target groups, some in close cooperation with other institutions. Some central banks consider their financial education activities a core competence and give them a prominent role, whereas the "educational visibility" of others is limited. Several central banks have recently launched financial literacy campaigns. Products designed to make people financially knowledgeable are aimed at key target groups, basically children, adolescents, students and teachers. Print products--once the product of choice--have been losing importance. Conversely, central banks use more and more modern knowledge transfer methods, in particular (multilingual) multimedia and e-education packages ranging from online games to multiyear educational programs. Moreover, some central banks have invested heavily in establishing special visitors or training centers, or have pooled knowledge e.g., at money museums. Central banks' educational Internet resources differ extensively in scope and presentation; only few central banks' websites provide truly comprehensive and easily accessible information. Financial knowledge transfer appears to work best from simple media and for products that are very strongly focused on individual benefit.
2007	I21	Gnan, Ernest, Maria Antoinette Silgoner, and Beat Weber. 2007. "Economic and Financial Education: Concepts, Goals and Measurement." <i>Monetary Policy and the Economy</i> , 0(0): 28-49. A review of the literature and of specific education initiatives reveals a broad range of approaches to economic and financial education. What knowledge areas and skills are targeted and how content is presented very much depends on the motives and goals of the various education providers. Central banks, for instance, provide economic and financial education basically for five reasons: (1) to enhance the effectiveness of monetary policy, (2) to ensure the smooth functioning of financial markets, (3) to support sustainable economic policies, (4) to promote economic and financial literacy as a public good and, (5) by doing so, build their reputation and promote acceptance for their actions. Economic and financial literacy tests have generally uncovered substantial knowledge gaps among citizens. Yet given the methodological deficiencies of the existing analyses, test scores must be interpreted with caution. Improving methodology remains a challenge for future research.
2007	I32 I38	de Mendonca, Helder Ferreira, and Jose Simao Filho. 2007. "Economic Transparency and Poverty." <i>Banca Nazionale del Lavoro Quarterly Review</i> , 60(240): 33-48. Nowadays, with the diffusion of inflation targeting, the main instrument that central banks use to achieve final objectives in the implementation of monetary policy (concerning inflation and unemployment) is the interest rate. Furthermore, recent studies point out that central bank transparency contributes to reducing asymmetric information and price stability. As inflation, unemployment and interest rates are determinants of the level of poverty, the central bank's behaviour is relevant to its reduction. Accordingly, the present paper highlights the connection between economic transparency and poverty. The theoretical and empirical results denote that central bank transparency is a useful strategy in reducing income inequality and poverty.
2007	J14	Muhlberger, Marion. 2007. "Banking in South Eastern Europe: Moving into the Spotlight." <i>Banks and Bank Systems</i> , 2(3): 17-31. In this paper we analyze the growth prospects and the stage of the banking sectors development in South Eastern Europe (SEE) compared to those of Central Eastern Europe. We estimate that the SEE banking market will grow by 17% p.a. (in EUR terms) until 2011. The retail sector is expected to remain the main engine of growth with more sophisticated retail products like investment funds and old-age provisioning gaining in importance. Although our credit-to-GDP model shows that the degree of financial intermediation is still below equilibrium levels, the high pace of credit, growth in some countries raises concerns about possible threats to macroeconomic and financial stability. However, bank's strong foreign ownership, sufficient capitalisation, still benign levels of non-performing loans and prudential and regulatory tightening measures by the central banks mitigate these risks.
2007	L26 L61	Bohacek, Radim, and Hugo Rodriguez Mendizabal. 2007. "Credit Markets and the Propagation of Monetary Policy Shocks." <i>Journal of Money, Credit, and Banking</i> , 39(6): 1429-55. This paper analyzes the propagation of monetary policy shocks through the creation of credit in an economy. Models of the monetary transmission mechanism typically feature responses that last for a few quarters contrary to what the empirical evidence suggests. To propagate the impact of monetary shocks over time, these models introduce adjustment costs by which agents find it optimal to change their decisions slowly. This paper presents another explanation that does not rely on any sort of adjustment costs or stickiness. In our economy, agents own assets and make occupational choices. Banks intermediate between agents demanding and supplying assets. Our interpretation is based on the way banks create credit and how the monetary authority affects the process of financial intermediation through its monetary policy. As the central bank lowers the interest rate by buying government bonds in exchange for reserves, high productive entrepreneurs are able to borrow more resources from low-productivity agents. We show that this movement of capital among agents sets in motion a response of the economy that resembles an expansionary phase of the cycle.

Stiglitz, 367-74. Foreword by George Soros. Initiative for Policy Dialogue at Columbia series. New York: Columbia University Press.
2007	L72	Henderson, Dale W., Stephen W. Salant, John S. Irons, and Sebastian Thomas. 2007. "The Benefits of Expediting Government Gold Sales." <i>Review of Financial Economics</i> , 16(3): 235-58. Additional gold can be made available either by mining at high cost (approximately \$250 per ounce in 1997 dollars) or by mobilizing government stocks at zero cost. Governments own massive above-ground stocks but loan out only a small percentage of these stocks. Making all government gold available for private uses immediately through some combination of sales and loans maximizes total welfare from private uses, a consequence of the first welfare theorem. We simulate a calibrated version of our model to quantify the effects of liquidating government stocks on alternative dates. If governments sell immediately rather than never, total welfare increases by \$340 billion; if they make an unanticipated sale in 20 years, \$105 billion of that amount is lost. By depressing prices, such sales benefit depletion and service users but injure private owners of stocks above and below-ground. However, the injury to above-ground stock owners is more than offset by the benefits to service users--often the same individuals. Mine owners would be the principal losers; however, they could be compensated (twice over) from government sales revenue without any need for tax increases.

2007	M55	Ng, Tim. 2007. "La réglementation des activités bancaires transfrontalières: La politique de la Nouvelle-Zélande en matière d'externalisation dans les banques. (Regulating Cross-Border Banking Activity: New Zealand's Policy on Outsourcing by Banks. With English summary.)." <i>Revue d'Economie Financière</i> , 0(90): 211-20. Banks in New Zealand are increasingly outsourcing a substantial range of their business activities, both to independent and to related-party service providers, and both within New Zealand and across borders. Cross-border outsourcing is of particular relevance to New Zealand banking regulation, as the New Zealand banking system is dominated by banks owned by offshore parent banks that, to varying degrees, provide services to their banking subsidiaries. The article explains the motivation for the outsourcing policy in terms of the Reserve Bank's prudential objectives, which include minimising the damage that could occur to the financial system in the event that a bank becomes distressed or fails. The outsourcing policy requires a large bank's board to ensure that it maintains legal and practical control over outsourced functions sufficient to achieve a set of outcomes related to continued liquidity provision to the financial system. The policy is outcomes-focused and emphasises board and senior management responsibility for delivery. With its fairly narrow focus on a defined set of outcomes, the policy seeks to ensure that the Reserve Bank's ability to manage crisis is not compromised, while making available to the financial system the benefits of association with foreign banks.

2007	O31	Jenkinson, Nigel. 2007. "New Markets and New Demands: Challenges for Central Banks in the Wholesale Market Infrastructure." <i>Bank of England Quarterly Bulletin</i> , 47(4): 607-12. In this speech, Nigel Jenkinson, Executive Director for financial stability, discusses some of the structural changes in the trading, clearing and settlement infrastructure supporting financial markets. He observes that, while central banks' typical objectives of monetary and financial stability emerged from an early role in settling claims between banks, the financial infrastructure has broadened and deepened over time, stretching beyond the traditional locus of central banks. And it continues to evolve, driven by the forces of ever faster technological and financial innovation, regulatory change and the globalisation of banking. These developments are exposing new sources of risk, posing fresh policy challenges for central banks.
2008		
2008	B25	White, Lawrence H. 2008. "Did Hayek and Robbins Deepen the Great Depression?" <i>Journal of Money, Credit, and Banking</i> , 40(4): 751-68. Contrary to some accounts, the Hayek-Robbins ("Austrian") theory of the business cycle did not prescribe a monetary policy of "liquidationism" in the sense of passive indifference to sharp deflation during the early years of the Great Depression. There is no evidence that Hayek or Robbins influenced any "liquidationist" in the Hoover administration or the Federal Reserve System. Federal Reserve policy during the Great Depression was instead influenced by the real bills doctrine, which (despite some apparent similarities) was diametrically opposed in key respects to Hayek's norms for central bank policy.
2008	B25	Thornton, Mark. 2008. "The Great Depression: Mises vs. Fisher." <i>Quarterly Journal of Austrian Economics</i> , 11(3-4): 230-41. Ludwig von Mises established the foundations of modern Austrian economics while Irving Fisher established the foundations of modern mainstream macroeconomics and central bank policy. Fisher helped create and was a proponent of mathematical economics, statistics and index numbers, and a monetary policy that I "stabilized" the value of the dollar. Fisher claimed that his scientific approach that established a new era of prosperity during the 1920s. Mises published a book in 1928 that critiqued Fisher's approach and predicted that it would lead to an economic crisis and collapse. Before the stock market crash in 1929 Fisher proclaimed a perpetual prosperity for the economy and continued to recommend investing in stocks long after the market had collapsed. In this important case study, Mises passed the "market test" while Fisher lost his personal fortune during an economic crisis that his economics help create.
2008	C52	Inoue, Atsushi, and Barbara Rossi. 2008. <i>Which Structural Parameters Are "Structural"? Identifying the Sources of Instabilities in Economic Models.</i> Duke University, Department of Economics, Working Papers: 08-02. The objective of this paper is to identify which parameters of a model are stable over time. Existing procedures can only be used to test whether a given subset of parameters is stable, and cannot be used to find which subset of parameters is stable. We propose a new procedure that is informative on the nature of instabilities affecting economic models, and sheds light on the economic interpretation and causes of such instabilities. Furthermore, our procedure provides clear guidelines on which parts of the model are reliable for policy analysis and which are possibly mis-specified. Our empirical findings suggest that instabilities during the Great Moderation were mainly concentrated in Euler and IS equations as well as in monetary policy. Such results offer important insights to guide the future theoretical development of macroeconomic models.
2008	D22	Correa, Daniela, and Gilberto Tadeu Lima. 2008. "O comportamento recente do investimento direto brasileiro no exterior em perspectiva. (The Recent Behavior of the Brazilian Direct Investment Abroad in Perspective. With English summary.)." <i>Revista de Economia Política/Brazilian Journal of Political Economy</i> , 28(2): 249-68. This paper analyzes the recent behavior of Brazilian direct investment abroad, as captured by an annual census conducted by the Central Bank of Brazil since 2001, by putting it in a broader perspective that includes international official data sources and early sample studies. Though the Central Bank has not been making available more disaggregated data than those analyzed here, it is intended to contribute to a better grasping of the perspectives of competitive internationalization of local firms, which is desirable not only as far as the external accounts are concerned, but also from the viewpoint of the technological capabilities of the local firms.
2008	F38	Ferreira Gabriel, Luciano, and Jose Luis da Costa Oreiro. 2008. "Fluxos de capitais, fragilidade externa e regimes cambiais--Uma revisão teórica. (Capital Flows, External Fragility and Currency Regimes: A Theoretical Review. With English summary.)." <i>Revista de Economia Política/Brazilian Journal of Political Economy</i> , 28(2): 331-57. The major integration and deregulation of the international financial markets increased the degree of interdependence and risk of incompatibility between the financial and monetary policy adopted by different countries. The consequences of these facts are the financial instability and the currency crisis. In this article we develop arguments advocating that independent of the currency regime adopted the national policy makers should take into account, between other factors, the major capital mobility and the integrations of markets. One of the corollaries of our analyses is that countries should pursue policies that reduces the degree of short-term capital volatile by the adoption of capital controls or though measures of prudential supervision.

2009	F44	Edey, Malcolm. 2009. "The Global Financial Crisis and Its Effects." <i>Economic Papers</i>, 28(3): 186-95. The global financial crisis has been one of the most significant economic shocks in the post-war period. At its core, the crisis originated in credit markets in developed countries--centred particularly in the United States, the United Kingdom and Europe--but the fallout has had a significant effect on activity in every country and region. As the crisis intensified, there was a large swing in the appetite of world financial markets for risk, and in their capacity to accept risk. The result was a shift from the easy credit conditions that had prevailed for some years to a situation of tight credit and in some cases dysfunctional markets. This was accompanied by a loss of consumer and business confidence, with significant effects on global activity. This article focuses on the main causes of the crisis, how it has affected the world economy, and how governments and central banks have responded.
2009	F44	Valentine, Tom. 2009. "Alternative Policy Responses to the Global Financial Crisis." <i>Economic Papers</i>, 28(3): 264-69. Governments have reacted to the economic slowdown arising from the Global Financial Crisis by injecting a fiscal stimulus into their economies. This policy will be ineffective when the country has a floating exchange rate, because the resulting inflow of funds will cause the exchange rate to appreciate, offsetting the stimulus effect. The experience of the Great Depression has suggested a better package of policies to deal with a global slowdown.
2009	F44	Cerna, Silviu. 2009. "The Crisis and Central Bank Reaction." <i>Review of Economic and Business Studies</i>, 0(3): 31-40. The world economy is in the face of the strongest crisis of the last seventy years. This crisis is still ongoing, but authorities in many countries have already taken a series of measures to mitigate the effects. In this fight, the central banks are the first line. It is still too early to draw any lessons from the events taking place, but a reflection "sine ira et studio" over this experience is already possible. This paper aims to analyze this experience through the policies implemented by central banks to cope with the crisis.
2009	I18	Marques, Rosa Maria, and Aquilas Mendes. 2009. "O social sob o "tao de ferro" da politica economica do periodo 2003-2006. (The Social Policy under the "Iron Heel" of Economic Policy in the Period of 2003-2006. With English summary.)" <i>Economia e Sociedade</i>, 18(3): 567-82. The article discusses the impact of economic policy maintenance in accordance with the new pattern of international capitalist accumulation under financial capital dominance in main Social Security areas. It analyses the adoption of inflation target system and the achievement of high fiscal primary results; describes the main Brazilian economic results and examine the impact of this particular option on social security with a focus on the financial system of the Unified Health System (SUS). In a specific way, it argues that this policy outcome--low economic growth, high interest rates, unstable work market, reduction in social expenditure--compromises an effective application of the SUS principles. However, some advances have been pointed out, for instance, the increase of Family Health Program coverage.

2009	L94	Vives, Xavier. 2009. <i>Strategic Supply Function Competition with Private Information</i> . CESifo Group Munich, CESifo Working Paper Series: CESifo Working Paper No. 2856. A finite number of sellers (n) compete in schedules to supply an elastic demand. The costs of the sellers have uncertain common and private value components and there is no exogenous noise in the system. A Bayesian supply function equilibrium is characterized; the equilibrium is privately revealing and the incentives to acquire information are preserved. Price-cost margins and bid shading are affected by the parameters of the information structure: supply functions are steeper with more noise in the private signals or more correlation among the costs parameters. In fact, for large values of noise or correlation supply functions are downward sloping, margins are larger than the Cournot ones, and as we approach the common value case they tend to the collusive level. Private information coupled with strategic behavior induces additional distortionary market power above full information levels and welfare losses which can be counteracted by subsidies. As the market grows large the equilibrium becomes price-taking, bid shading is of the order of $1/n$, and the order of magnitude of welfare losses is $1/n^2$. The results extend to demand schedule competition and a range of applications in product and financial markets are presented.

With English summary.)." <i>Bancaria</i> , 65(10): 80-83. The financial crisis has highlighted the issue of compensation of managing directors. In Italy, the Central Bank has taken action to avoid banks' crises in deep contrast with the high level of managers' compensations. With specific rules the Bank of Italy has granted to the shareholders' meeting the power to determine these compensations.
2009	N00	Bordo, Michael D., and Harold James. 2009. <i>The Great Depression Analogy</i> . National Bureau of Economic Research, Inc, NBER Working Papers: 15584. This paper examines three areas in which analogies have been made between the interwar depression and the financial crisis of 2007 which reached a dramatic climax in September 2008 with the collapse of Lehman Brothers and the rescue of AIG: they can be labeled macro-economic, micro-economic, and geo-political. First, the paper considers the story of monetary policy failures; second, there follows an examination of the micro-economic issues concerned with bank regulation and the reorganization of banking following the failure of one or more major financial institutions and the threat of systemic collapse; third, the paper turns to the issue of global imbalances and asks whether there are parallels that might be found in this domain too between the 1930s and the events of today.
2009	N75	Mitchener, Kris James, Masato Shizume, and Marc D. Weidenmier. 2009. <i>Why did Countries Adopt the Gold Standard? Lessons from Japan</i> . National Bureau of Economic Research, Inc, NBER Working Papers: 15195. Why did policymakers adopt the gold standard? Although previous research has identified ex post effects of gold standard adoption on trade and bond yields, few studies have sought to understand whether these were the actual outcomes of interest to policymakers at the time of adoption. We examine the political economy of Japan's adoption of the gold standard in 1897 by exploring the ex ante motives of policymakers as well as how the legislative decision to adopt gold won approval. We then link the beliefs of contemporaneous policymakers to data so that we can test the economic effects of adoption. In contrast to previous studies examining bond yields, we find little evidence that joining the gold standard reduced Japan's country risk or investors anticipated a dramatic decline in borrowing rates for the government. Moreover, we find no evidence of a domestic investment boom or that investors anticipated one and bid it into stock prices. However, as some policymakers suggested, we find that membership in the gold standard increased Japan's exports by lowering transactions costs and because the price of gold fell relative to silver, making exports to silver standard countries more competitive. While Japan also received a boost in exports to its regional trading partners when it switched from paper to silver, going onto gold allowed Japan to tap into the growing share of global trade that was centered on the gold standard: by the late 1890s nearly 60 percent of Japanese exports and total trade were with members of the gold club.
2009	O22	Marshall, Wesley C., and Louis-Philippe Rochon. 2009. "Financing Economic Development in Latin America: The Banco del Sur." <i>Journal of Post Keynesian Economics</i> , 32(2): 185-98. In this paper, the authors lay out a proposal for the institutional framework for the Banco del Sur. Considering the recent historical experiences of Latin America and the need to promote economic activity based in domestic currencies and channeled through nationally owned banks, the authors suggest that the Banco del Sur be divided into two parts--a regional development bank and a regional central bank that issues a regional currency. Under such a scheme, the region would benefit from greater financial stability while member countries would be afforded the maximum economic sovereignty possible.
2009	O51 R20	Baker, Dean. 2009. <i>The Housing Crash Recession and the Case for a Third Stimulus</i> . Center for Economic and Policy Research (CEPR), CEPR Reports and Issue Briefs. This paper makes the case for a third stimulus package to in the face of economic indicators signaling that the economy is in a deeper downturn than was expected based on previous projections. Specifically, the report calls for an employer tax-credit for extending health care coverage and another per worker employer tax credit for increasing paid time off from work. The author also makes the case for a housing policy centered on the stabilization of prices in non-bubble and deflated markets rather than applying the same efforts on markets that remain at bubble inflated levels. Finally, the paper argues that the dollar must be allowed to fall in order to adjust trade imbalances that are compounding the U.S. economic crisis caused by the collapse of the housing market.
2009	Q33	Dancourt, Oscar. 2009. "Choques externos y politica monetaria. (With English summary.)." <i>Economia (Pontifical Catholic University of Peru)</i> , 32(64): 127-73. One goal of this paper is to discussing the macroeconomic impact that an international commodity prices boom has in a small open economy under perfect capital mobility. A Mundell-Fleming model with some adaptations is used for the analysis of this real external shock. There are two effects: the monetary one that is a recessionary impulse, and the one that increases aggregate demand. Also the macroeconomic impact of a real external shock is compared with the effect of a financial external shock (changes in the external rate of interest), in a dollarized economy with a floating exchange rate. The other goal of this paper is to show that central bank sterilized intervention in the foreign exchange market can be an effective policy response to copy with real financial external shocks. The macroeconomic impact of external shocks depends upon the economic structure, the monetary and fiscal policy mix, and the exchange rate regime.

2009	R30	Berk, Ales S., and Ksenija Rupnik. 2009. "Dejavnik kreditnega razmika v finančni krizi. (Determinants of Credit Spread in a Financial Crisis. With English summary)." <i>Bančni Vestnik</i>, 58(5): 28-33. Due to US 2007/08 financial crisis credit spreads increased significantly. Credit spreads indicate investor perception of credit risk and impact accessibility and cost of sources of financing. The main determinants of the credit spreads at work in recent developments on financial markets were increased leverage (at lenders and borrowers), rising interest rates and lowered real estate prices that led to loss of confidence and brought around negative investor sentiment. That impacted primary and secondary market liquidity, caused significant market volatility and forced selling of financial assets which drastically lost values. Financial turmoil which has not been only a temporary phenomenon has started to impact real economy as demand slowed, causing the start of the downward cycle.
2009	R30	Farhi, Maryse, and Marcos Antonio Macedo Cintra. 2009. "The Financial Crisis and the Global Shadow Banking System." <i>Revue de la Regulation</i>, 0(5): The financial crisis triggered by increasing default rate, real estate devaluation, and financial asset depreciation associated with the US subprime mortgages brought back the debate about the framework of the US and international financial systems, their potential systemic risks, and their regulatory and supervisory mechanisms. Credit derivatives and structured products backed by real estate credit replicated and multiplied risks by an unknown factor besides redistributing them at a global scale. A large number of poorly regulated and badly supervised financial institutions--no capital requirements, no access to deposit insurances, rediscount operations, and last resort credit lines by central banks--became the counterparty of the credit risk transfer from the banking system and started to hold increasing risks. The intermingling of these institutions and markets engendered a global shadow banking systems and markets.
2009	R38	Robinson, Steve N., and Derrick P. Nantz. 2009. "Lessons to Be Learned from the Financial Crisis." <i>Journal of Private Enterprise</i>, 25(1): 5-22. This article aims to take a careful and sober inquiry into the political and economic origins of today's financial crisis. We find that the political and economic causes of this crisis lie in the easy money policy of the Federal Reserve and the drastic regulatory and policy changes in the mortgage industry, which developed during the Clinton years and continued into the Bush administrations. We find that these policy changes were motivated by an administration-wide political goal for affordable housing, a goal seen as having moral importance, which was advanced almost without regard to its potential consequences.

2010	C01	Giannone, Domenico, Jerome Henry, Magdalena Lalik, and Michele Modugno. 2010. <i>An Area-Wide Real-Time Database for the Euro Area</i>. C.E.P.R. Discussion Papers, CEPR Discussion Papers: 7673. This paper describes how we constructed a real time database for the euro area covering more than 200 series regularly published in the European Central Bank Monthly Bulletin, as made available ahead of publication to the Governing Council members before their first meeting of the month. We describe the database in details and study the properties of the euro area real-time data flow and data revisions, also providing comparisons with the United States and Japan. We finally illustrate how such revisions can contribute to the uncertainty surrounding key macroeconomic ratios and the NAIRU.
2010	C58	Raghavan, Mala, Jonathan Dark, and Elizabeth Ann Maharaj. 2010. "Impact of Capital Control Measures on the Malaysian Stock Market: A Multiresolution Analysis." <i>International Journal of Managerial Finance</i>, 6(2): 116-27. The purpose of this paper is to examine the extent to which the capital control measures implemented by the Malaysian central bank in late 1998 had an influence on segmenting the Malaysian equity market from other major equity markets. The S&P 500, the Nikkei 225 Index, the STI Index and the KLSE Composite Index are considered. The discrete wavelet transform technique--"Haar" is employed to decompose the series into various time scales during the pre- and post-capital control periods in Malaysia. The decomposed series are then used to estimate the interdependence between KLSE Composite Index with the other three markets at various time scales. The empirical findings support three conclusions. First, in the pre-capital control period, Singapore is the most influential market followed by the US across all time scales in transmitting news into Malaysia. Second, after the imposition of capital controls, the spillover effects from Singapore to Malaysia have declined substantially, suggesting a reduced integration between these two markets. Finally, in the post-capital control period, all three markets appear to be imparting a similar but moderate level of influence on the Malaysian market.
2010	C58	Jawadi, Fredj, Mohamed Hedi Arouri, and Duc Khuong Nguyen. 2010. "Global Financial Crisis, Liquidity Pressure in Stock Markets and Efficiency of Central Bank Interventions." <i>Applied Financial Economics</i>, 20(7-9): 669-80. In this article, we investigate the hypothesis of efficiency of central bank intervention policies within the current global financial crisis. We firstly discuss the major existing interventions of central banks around the world to improve liquidity, restore investor confidence and avoid a global credit crunch. We then evaluate the short-term efficiency of these policies in the context of the UK, the US and the French financial markets using different modelling techniques. On the one hand, the impulse response functions in a Structural Vector Autoregressive (SVAR) model are used to apprehend stock market reactions to central bank policies. On the other hand, since these reactions are likely to be of an asymmetric and nonlinear nature, a two-regime Smooth Transition Regression-Generalized Autoregressive Conditional Heteroscedasticity (STR-GARCH) model is estimated to explore the complexity and nonlinear responses of stock markets to exogenous shifts in monetary policy shocks. As expected, our findings show strong repercussions from interest rate changes on stock markets, indicating that investors keep a close eye on central bank intervention policies to make their trading decisions. The stock markets lead monetary markets, however, when central banks are slow to adjust their benchmark interest rates.
2010	C58	Laopodis, Nikiforos T. 2010. "Dynamic Linkages between Monetary Policy and the Stock Market." <i>Review of Quantitative Finance and Accounting</i>, 35(3): 271-93. This paper examines the dynamic linkages between the federal funds rate and the stock market during the 1970-2004 period using the VAR methodology. We detected a disconnection between Fed actions and market responses in the 1990s relative to the 1970s and 1980s. Upon further analyses, we observed asymmetric effects of monetary policy actions on the stock market and that such actions were more turbulent during bear markets than bull markets. Overall, our results appear to suggest that there was consistent dynamic relationship between the conduct of monetary policy and the corresponding behavior by the stock market during the last three decades.

2010	D21	Bebchuk, Lucian A., and Itay Goldstein. 2010. <i>Self-Fulfilling Credit Market Freezes</i>. National Bureau of Economic Research, Inc, NBER Working Papers: 16031. This paper develops a model of a self-fulfilling credit market freeze and uses it to study alternative governmental responses to such a crisis. We study an economy in which operating firms are interdependent, with their success depending on the ability of other operating firms to obtain financing. In such an economy, an inefficient credit market freeze may arise in which banks abstain from lending to operating firms with good projects because of their self-fulfilling expectations that other banks will not be making such loans. Our model enables us to study the effectiveness of alternative measures for getting an economy out of an inefficient credit market freeze. In particular, we study the effectiveness of interest rate cuts, infusion of capital into banks, direct lending to operating firms by the government, and the provision of government capital or guarantees to finance or encourage privately managed lending. Our analysis provides a framework for analyzing and evaluating the standard and nonstandard instruments used by authorities during the financial crisis of 2008-2009.
2010	D86	Philippon, Thomas, and Vasiliki Skreta. 2010. <i>Optimal Interventions in Markets with Adverse Selection</i>. C.E.P.R. Discussion Papers, CEPR Discussion Papers: 7737. We study interventions to restore efficient lending and investment when financial markets fail because of adverse selection. We solve a design problem where the decision to participate in a program offered by the government can be a signal for private information. We characterize optimal mechanisms and analyze specific programs often used during banking crises. We show that programs attracting all banks dominate those attracting only troubled banks, and that simple guarantees for new debt issuances implement the optimal mechanism, while equity injections and asset buyback do not. We also discuss the consequences of moral hazard.

Cambridge and New York: Cambridge University Press.
2010	E02	Ito, Takatoshi. 2010. <i>Great Inflation and Central Bank Independence in Japan</i>. National Bureau of Economic Research, Inc, NBER Working Papers: 15726. Japan suffered a very high inflation rate in 1973-74. The CPI inflation rate rose to near 30% in 1974, the highest rate in the postwar Japanese history after the chaotic hyperinflation following the end of the Second World War. Traditionally, the oil crisis is blamed for the 1973-74 high inflation. However, due to monetary policy decisions in 1972-73, the inflation rate had already exceeded 10% before the onset of the oil crisis in October 1973. These decisions include the interest rate cut of June 1972 and the interest rate hike of April 1973, which in retrospect proved too small. Concern about the rapid yen appreciation produced political pressure on the Bank of Japan to continue easing. The Bank of Japan came out of the Great Inflation of 1973 with a stronger voice. The Bank successfully argued that its recommendation to tighten monetary policy should not be overruled or the high inflation would be repeated. By this logic, the Bank of Japan obtained /de facto/ independence after 1975. When faced with the next economic recovery in 1979, again accompanied by oil price increases, the Bank of Japan was able to tighten monetary policy and to contain the inflation rate under 10 percent. The interest rate in the 1972-75 period was well below, by as much as 25 percentage points in 1973, the interest rate suggested by a modified monthly Taylor rule regression.
2010	E02	Blinder, Alan. 2010. <i>Quantitative Easing: Entrance and Exit Strategies</i>. Princeton University, Department of Economics, Center for Economic Policy Studies., Working Papers: 1219. Apparently, it can happen here. On December 16, 2008, the Federal Open Market Committee (FOMC), in an effort to fight what was shaping up to be the worst recession since 1937, reduced the federal funds rate to nearly zero.1 From then on, with all of its conventional ammunition spent, the Federal Reserve was squarely in the brave new world of quantitative easing. Chairman Ben Bernanke tried to call the Fed's new policies credit easing, probably to differentiate them from what the Bank of Japan had done earlier in the decade, but the label did not stick.
2010	E02	Alpanda, Sami, and Adam Honig. 2010. "Political Monetary Cycles and a De Facto Ranking of Central Bank Independence." <i>Journal of International Money and Finance</i>, 29(6): 1003-23. Political monetary cycles are less likely to occur in countries with independent central banks. Independent central banks can withstand political pressure to stimulate the economy before elections or finance election-related increases in government spending. Based on this logic and supporting evidence, we construct a de facto ranking of central bank independence derived from the extent to which monetary policy varies with the electoral cycle. The ranking avoids well-known problems with existing measures of central bank independence and provides independent information about average inflation and inflation volatility differences across countries.
2010	F24	THE SAME AS C81 Irving, Jacqueline, Sanket Mohapatra, and Dilip Ratha. 2010. <i>Migrant Remittance Flows: Findings from a Global Survey of Central Banks</i>, World Bank Working Paper, no. 194. Washington, D.C.: World Bank.
2010	H68	Baghestani, Hamid. 2010. "On the Accuracy of Federal Reserve Forecasts of the Budget Deficit-Output Ratio." <i>Applied Economics Letters</i>, 17(10-12): 1115-18. Monetary authorities, while unable to resolve fiscal imbalances, have to deal with their consequences in formulating monetary policy. This article asks whether the Federal Open Market Committee (FOMC) is provided with accurate forecasts of the federal budget deficit-output ratio. We show that the forecasts made in the period 1982 to 2002 are unbiased with useful predictive information above that contained in time-series forecasts.
2010	J42	Henckel, Timo. 2010. "Monopolistic Unions, Brainard Uncertainty, and Optimal Monetary Policy." <i>Oxford Economic Papers</i>, 62(2): 307-22. Some authors have argued that multiplicative uncertainty may benefit society as the cautionary motive reduces the inflation bias. However, when there are non-atomistic wage setters, higher multiplicative uncertainty may raise the wage premium and unemployment and thus reduce welfare. Furthermore, since central bank preferences also affect the wage premium, delegating policy to an independent central banker with an optimal degree of conservatism cannot deliver a second-best outcome.
2010	O50	Weisbrot, Mark, and Rebecca Ray. 2010. <i>Latvia's Recession: The Cost of Adjustment With An "Internal Devaluation"</i>. Center for Economic and Policy Research (CEPR), CEPR Reports and Issue Briefs. The Latvian recession, which is now more than two years old, has seen a world-historical drop in GDP of more than 25 percent. The IMF projects another 4 percent drop this year, and predicts that the total loss of output from peak to bottom will reach 30 percent. This would make Latvia's loss more than that of the U.S. Great Depression downturn of 1929-1933. This paper argues that the depth of the recession and the difficulty of recovery are attributable in large part to the decision to maintain the country's overvalued fixed exchange rate, because it prevents the government from pursuing the policies necessary to restore economic growth.
2010	O50	Weisbrot, Mark, and Juan Antonio Montecino. 2010. <i>Alternatives to Fiscal Austerity in Spain</i>. Center for Economic and Policy Research (CEPR), CEPR Reports and Issue Briefs. 2010	Q01	Tymoigne, Eric. 2010. <i>Financial Stability, Regulatory Buffers, and Economic Growth: Some Postrecession Regulatory Implications</i>. Levy Economics Institute, The Economics Working Paper Archive. Over the past 40 years, regulatory reforms have been undertaken on the assumption that markets are efficient and self-corrective, crises are random events that are unpreventable, the purpose of an economic system is to grow, and economic growth necessarily improves well-being. This narrow framework of discussion has important implications for what is expected from financial regulation, and for its implementation. Indeed, the goal becomes developing a regulatory structure that minimizes the impact on economic growth while also providing high-enough buffers against shocks. In addition, given the overarching importance of economic growth, economic variables like profits, net worth, and low default rates have been core indicators of the financial health of banking institutions. This paper argues that the framework within which financial reforms have been discussed is not appropriate to promoting financial stability. Improving capital and liquidity buffers will not advance economic stability, and measures of profitability and delinquency are of limited use to detect problems early. The paper lays out an alternative regulatory framework and proposes a fundamental shift in the way financial regulation is performed, similar to what occurred after the Great Depression. It is argued that crises are not random, and that their magnitude can be greatly limited by specific pro-active policies. These policies would focus on understanding what Ponzi finance is, making a difference between collateral-based and income-based Ponzi finance, detecting Ponzi finance, managing financial innovations, decreasing competitions in the banking industry, ending too-big-to-fail, and deemphasizing economic growth as the overarching goal of an economic system. This fundamental change in regulatory and supervisory practices would lead to very different ways in which to check the health of our financial institutions while promoting a more sustainable economic system from both a financial and a socio-ecological point of view.
2010	Q32	Tas, Bedri Kamil Onur, and Selahattin Togay. 2010. "Optimal Monetary Policy Regime for Oil Producing Developing Economies: Implications for Post-war Iraq." <i>Economic Modelling</i>, 27(5): 1324-36. This paper theoretically investigates optimal monetary policy regime for oil producing developing countries. We analyze credibility and reputation of the Central Bank and macroeconomic dynamics under alternative monetary policy regimes. We construct a detailed and realistic model that can be used to analyze macroeconomic structure and expectation dynamics of an oil producing open economy. We take into account the asymmetric information between the public and the central bank and theoretically investigate how this asymmetric information impacts the real economy and the credibility of the central bank. The simulation results indicate that central bank achieves higher credibility and lower inflation under dollarization and higher output levels under currency board regime. The model constructed in this paper has many policy implications for oil producing open economies. Using the implications of the model, we make monetary policy regime recommendations for post-war Iraq.
2010	Q58	Fitoussi, Jean-Paul, and Jacques Le Cacheux, eds. 2010. <i>Report on the State of the European Union. Volume 3. Crisis in the EU Economic Governance</i>, New York: St. Martin's Press, Palgrave Macmillan. Eight papers examine economic issues related to the progress of European integration with particular focus on the Euro Zone and the current financial crisis. Papers discuss globalization and the twin protections (Jean-Paul Fitoussi); Euro Area polices and macro economic performance, ten years on--institutions, incentives, and strategies (J'rome Creel, Eloi Laurent, and Jacques Le Cacheux); peer pressure and fiscal rules (Fitoussi and Francesco Saraceno); the European Central Bank's quiet hijacking of the Euro Area's exchange rate (Creel, Laurent, and Le Cacheux); the Irish tiger and the German frog--the tale of size and growth in the Euro Area (Laurent and Le Cacheux); funding the EU budget with a genuine own resource--the case for a European tax (Le Cacheux); the EU environmental strategy (Fitoussi, Laurent, and Le Cacheux); and if it's broken, don't fix it--the government of the Euro Area in the EU Reform Treaty (Laurent).

2011	B23	den Butter, Frank A. G., and Harro B. J. B. Maas. 2011. <i>From Expert Judgment to Model based Monetary Analysis: The Case of the Dutch Central Bank in the Postwar Period</i>. Tinbergen Institute, Tinbergen Institute Discussion Papers: 11-161/3. This paper investigates the history of the shift from expert to model based monetary policy analysis at the Dutch Central Bank (DNB) in the postwar period up to the middle of the nineteen-eighties. For reasons that will become clear expert based reasoning at DNB was referred to as normative impulse analysis. Our focus is on two aspects of this shift: (i) from an expert based monetary analysis to a model based analysis of channels of monetary transmission, and (ii) from the top down way of monetary analysis where the president of DNB acted as the monetary expert that was in line with the hierarchical organisation of DNB to the bottom up modelling approach that was set up by a group of newly hired young academic outsiders and destabilized DNB's organisation. The resulting econometric model enabled DNB to regain some of its argumentative strength in the Dutch policy arena that had become dominated by the econometric model of the Dutch Planning Bureau (of which Tinbergen was the first director), but also led to tensions within DNB's organisation. In spite of efforts to incorporate the main aspects of Holtrop's monetary analysis within the model, its concomitant new research group appeared difficult to integrate within the hierarchical organisation of DNB. The model analysis resulted in the MORKMON model which replaced Holtrop's analysis in the mid 1980s and was regularly used in policy analysis and forecasting of DNB until 2011, when the model was replaced by the DELFI model.
2011	C13	Poghosyan, K., and J. R. Magnus. 2011. <i>WALS estimation and forecasting in factor-based dynamic models with an application to Armenia</i>. Tilburg University, Center for Economic Research, Discussion Paper: 2011-054. Two model averaging approaches are used and compared in estimating and forecasting dynamic factor models, the well-known BMA and the recently developed WALS. Both methods propose to combine frequentist estimators using Bayesian weights. We apply our framework to the Armenian economy using quarterly data from 2000-2010, and we estimate and forecast real GDP and inflation dynamics.
2011	C25	van den Hauwe, Sjoerd, Dick van Dijk, and Richard Paap. 2011. <i>Bayesian Forecasting of Federal Funds Target Rate Decisions</i>. Tinbergen Institute, Tinbergen Institute Discussion Papers: 11-093/4. This paper examines which macroeconomic and financial variables are most informative for the federal funds target rate decisions made by the Federal Open Market Committee (FOMC) from a forecasting perspective. The analysis is conducted for the FOMC decision during the period January 1990-June 2008, using dynamic ordered probit models with a Bayesian endogenous variable selection methodology and real-time data for a set of 33 candidate predictor variables. We find that indicators of economic activity and forward-looking term structure variables as well as survey measures have most predictive ability. For the full sample period, in-sample probability forecasts achieve a hit rate of 90 percent. Based on out-of-sample forecasts for the period January 2001-June 2008, 82 percent of the FOMC decisions are predicted correctly.
2011	C25	Caetano, Sidney Martins, Geraldo Edmundo Silva Jr., and Wilson Luiz Rotatori Correa. 2011. "Abordagem discreta para a dinamica da taxa selic-meta. (Discrete Approach to the Dynamics of Target-Selic Rate. With English sumamry)." <i>Economia Aplicada/Brazilian Journal of Applied Economics</i>, 15(2): 199-221. In this paper, we follow a non-stationary discrete approach to

Year	DE	Title and Abstract
		model the baseline rate in Brazil. The paper innovates in approaching the decisions in terms of a hike, maintenance, or cut in the baseline rate rather than assume that it follows a continuous path. Our model seems to be parsimonious and forecasts correctly 83% of the actual Copom decisions. The estimated parameters define a threshold to the Copom actions which is asymmetric, but finds no significant differences between high and low thresholds.
2011	C26	Klaassen, Franc. 2011. <i>Identifying the Weights in Exchange Market Pressure</i>. Tinbergen Institute, Tinbergen Institute Discussion Papers: 11-020/2 . Exchange market pressure (EMP) measures the pressure on a currency to depreciate. It adds to the actual depreciation a weighted combination of policy instruments used to ward off depreciation, such as interest rates and foreign exchange interventions, where the weights are their effectiveness. The key difficulty in the literature is how to identify these weights. We exploit the persistence of pressure and add instruments based on currency crisis theories to identify the weights, and we propose a simple IV regression to estimate them. An application to the European Monetary System crisis in 1992-1993 shows that a one percentage point higher interest rate wards off a depreciation of about 0.2 percent.
2011	C36	Poghosyan, K., and O. Boldea. 2011. <i>Structural versus Matching Estimation: Transmission Mechanisms in Armenia</i>. Tilburg University, Center for Economic Research, Discussion Paper: 2011-104 . Opting for structural or reduced form estimation is often hard to justify if one wants to both learn about the structure of the economy and obtain accurate predictions. In this paper, we show that using both structural and reduced form estimates simultaneously can lead to more accurate policy predictions. Our findings are based on using new information criteria whose econometric properties allow us to pick for both methods the impulse responses that are valid and relevant for prediction. We illustrate our findings in the context of analyzing the monetary transmission mechanism for Armenia. Based on picking valid and relevant information from both structural and reduced form matching estimation, our findings suggest that the interest rate targeting and the exchange rate channel are well specified and strongly reinforce each other in promoting the recent double-digit growth Armenia experienced before the crisis.
2011	D85	Kraenzlin, Sebastien Philippe, and Benedikt von Scarpatetti. 2011. <i>Bargaining Power in the Repo Market</i>. Swiss National Bank, Working Papers: 2011-14 . In this paper, we analyze the price setting behavior of banks in the Swiss franc repo market by means of network topology concepts and measures. The sample ranges from October 1999 to December 2009. Hence, it covers a large part of the money market turmoil that started in August 2007. Among others, we find evidence that market participants use their bargaining power as well as private information between two trading partners for price differentiation. The effect of the bargaining power was even more pronounced during the financial turmoil.
2011	F01	Lo Duca, Marco, and Tuomas A. Peltonen. 2011. <i>Macro-financial vulnerabilities and future financial stress: assessing systemic risks and predicting systemic events</i>. European Central Bank, Working Paper Series: 1311 . This paper develops a framework for assessing systemic risks and for predicting (out-of-sample) systemic events, i.e. periods of extreme financial instability with potential real costs. We test the ability of a wide range of "stand alone" and composite indicators in predicting systemic events and evaluate them by taking into account policy makers' preferences between false alarms and missing signals. Our results highlight the importance of considering jointly various indicators in a multivariate framework. We find that taking into account jointly domestic and global macrofinancial vulnerabilities greatly improves the performance of discrete choice models in forecasting systemic events. Our framework shows a good out-of-sample performance in predicting the last financial crisis. Finally, our model would have issued an early warning signal for the United States in 2006 Q2, 5 quarters before the emergence of money markets tensions in August 2007.
2011	F01	Sarlin, Peter, and Tuomas A. Peltonen. 2011. <i>Mapping the state of financial stability</i>. European Central Bank, Working Paper Series: 1382 . The paper uses the Self-Organizing Map for mapping the state of financial stability and visualizing the sources of systemic risks as well as for predicting systemic financial crises. The Self-Organizing Financial Stability Map (SOFSM) enables a two-dimensional representation of a multidimensional financial stability space that allows disentangling the individual sources impacting on systemic risks. The SOFSM can be used to monitor macro-financial vulnerabilities by locating a country in the financial stability cycle: being it either in the pre-crisis, crisis, post-crisis or tranquil state. In addition, the SOFSM performs better than or equally well as a logit model in classifying in-sample data and predicting out-of-sample the global financial crisis that started in 2007. Model robustness is tested by varying the thresholds of the models, the policymaker's preferences, and the forecasting horizons.

"Japanese Central Bank Interventions and the Dispersion of Individual Exchange Rate Expectations: Differential Impact on Four Moment Characteristics." <i>International Journal of Behavioural Accounting and Finance</i>, 2(2): 152-77 . We investigate the influence of Japanese central bank interventions on market participants' opinions about the future path of exchange rates. Based on a survey of individual forecasts made by 31 analysts, we investigate the sensitivity of the change, dispersion, directionality, and flatness of expectation distributions between January 1995 and December 2004. In line with previous findings, we provide evidence that exchange rate market volatility is positively linked to the degree of dispersion among market participants' expectations. Only large and transparent central bank interventions have a significant influence on market participants' opinions about the future path of exchange rates. Uncertainty is exclusively reduced among 12-month forecasts. It should be stressed furthermore that for these forecasts positive interest rate spreads and interventions are shown to have an asymmetric impact on heterogeneity: they tend to increase the degree of consensus among forecasters who attach more weight to a stronger yen and to increase the degree of disagreement among the others.
2011	I10	Weisbrot, Mark, Rebecca Ray, Juan Montecino, and Sara Kozameh. 2011. <i>The Argentine Success Story and its Implications</i>. Center for Economic and Policy Research (CEPR), CEPR Reports and Issue Briefs . The Argentine economy has grown 94 percent for the years 2002-2011, using International Monetary Fund projections for the end of this year. This is the fastest growth in the Western Hemisphere for this period, and among the highest growth rates in the world. It also compares favorably to neighboring economies that are commonly seen as quite successful, such as Brazil, which has had less than half as much growth over the same period.

(With English summary.)" <i>Jahrbuch für Wirtschaftswissenschaften/Review of Economics</i>, 62(2): 139-59 . Based on the model of Cordelia and Yeyati (2003) this paper compares the effect of several bailout strategies of a "lender of last resort" (LoLR) on a bank's risk behaviour. We show that both "constructed ambiguity", defined as a properly mixed strategy, and a pure strategy where a LoLR rescues always or never are not the optimal strategies. The LoLR should rather apply a contingent rule which means that he should announce and commit ex ante to a bailout policy depending on a verifiable state of nature. For this reason the optimal bailout policy

Year	DE	Title and Abstract
		should not be case by case, but follow an ex ante defined rule. Consequently, there is no contradiction between incentive efficiency and transparency of an efficient LoLR-policy.

2011	N33	Burdekin, Richard C. K., Kris James Mitchener, and Marc D. Weidenmier. 2011. <i>Irving Fisher and Price-Level Targeting in Austria: Was Silver the Answer?</i>. National Bureau of Economic Research, Inc, NBER Working Papers: 17123. The question of price level versus inflation targeting remains controversial. Disagreement concerns, not so much the desirability of price stability, but rather the means of achieving it. Irving Fisher argued for a commodity dollar standard where the purchasing power of money was fixed by indexing it to a basket of commodities. We show that movements in the price of silver closely track the movements in overall prices during the classical gold standard era. The one-to-one relationship between paper and silver bonds suggests that a simple "silver rule" could have sufficed to fix the purchasing power of money.
2011	O43	Jaksic, Miodir. 2011. "Makroekonomija, politika i ekonomske performanse. (With English summary)." <i>Ekonomске ideje i praksa</i>, 0(1): 9-25. Growth and development are reversible processes, warranted success doesn't exist without institutional changes that are a key success factor, a precondition of continuous growth, environment for innovations, changes, and learning. The key role of institutions is securing stability and continuity. Institutional innovativeness is confirmed in great historical events as transition to capitalism, the Great Depression, and postwar reconstruction. Such institutional innovativeness manifests itself in time consistent monetary policy, independent and accountable key economic institutions, such as the central bank. Realisation of economic rules that are preconditions for resolving the current economic crisis worldwide and in Serbia, too. Good institutions are characterized with three attributes: first, they establish and protect property rights; second, they restrict social elites who strive to expropriate income and property of others members of society; and third, they provide equal chances for employment, social security, and civil rights to all individuals. Good institutions contribute to political stability, successful macroeconomic policy, and enhance initiatives. No single factor is responsible for democratization exists, different factors are responsible for establishment and consolidation of democracy, there exists a clash of interests between public and elites, public favours democratic, whilst elites favour repressive order, social outcomes are uncertain, as at least two outcomes are a possible transition from democracy towards repression and vice versa.

2012	A14	Chan, Kam C., Chih-Hsiang Chang, and Yining Chen. 2012. "A Retrospective Analysis of Financial Research by Worldwide Central Banks and International Monetary Organizations." <i>Applied Economics Letters</i>, 19(16-18): 1917-22. We examine the publications by Central Banks (CB) and International Monetary Organizations (IMO) in renowned finance journals over the past two decades. Unsurprisingly, the most productive CB in financial research are the Federal Reserve Board, the Federal Reserve Bank of New York, the World Bank, and the International Monetary Fund (IMF). Although the worldwide CB have, more or less, increased productivity over the years, more than a few CB in Europe have made noticeable progress and revealed sizeable upsurge in financial research productivity. Also noteworthy is that the most productive central bank researchers are affiliated with a few highly productive institutions whereas the majority of them have prior or concurrent academic experience.
2012	A33	Alexander, Kern, and Rahul Dhumale, eds. 2012. <i>Research Handbook on International Financial Regulation</i>, Cheltenham, U.K. and Northampton, Mass.: Elgar. Nineteen papers address the economic, legal, and regulatory issues that relate to the control of systemic risk in global financial markets and consider how best to rebuild the institutions and practices of financial regulation in the aftermath of the crisis. Papers discuss the nature of modern credit markets, banking, and financial innovation; the shadow banking system as a new source of financial turmoil; ethical failures in regulating and supervising the pursuit of safety net subsidies; the determinants of capital held by U.K. banks and building societies and the role of individual capital requirements; considerations on developing and validating expected loss methodologies; the Basel Capital Rules and trade finance; some rules for cross-border banks in Europe; transatlantic convergence of financial regulation--a European perspective; the new course of EU State Aid Rules during the 2007-09 financial crisis; globalization and the regulation of foreign direct investment--recent proposals; central counterparties and derivatives; the European regulation of central counterparties--some international challenges; lessons from Japan's banking crisis--1991-2005; determinants of financial supervision regimes--markets, institutions, politics, law, or geography?; liquidity illusions in the global financial architecture; governance in international financial institutions--the case of the International Monetary Fund; foreign initial public offerings--the experience of Israeli firms; international regulatory reform and financial taxes; and goodbye neoliberalism?--contested policy responses to uncertain consequences of the 2007-09 financial crisis.
2012	C12	Coroneo, Laura, Valentina Corradi, and Paulo Santos Monteiro. 2012. <i>Testing for optimal monetary policy via moment inequalities</i>. University of Warwick, Department of Economics, The Warwick Economics Research Paper Series (TWERPS). The specification

Year	DE	Title and Abstract
		of an optimizing model of the monetary transmission mechanism requires selecting a policy regime, commonly commitment or discretion. In this paper we propose a new procedure for testing optimal monetary policy, relying on moment inequalities that nest commitment and discretion as two special cases. The approach is based on the derivation of bounds for inflation that are consistent with optimal policy under either policy regime. We derive testable implications that allow for specification tests and discrimination between the two alternative regimes. The proposed procedure is implemented to examine the conduct of monetary policy in the United States economy. Key words: Bootstrap; GMM; Moment Inequalities; Optimal Monetary Policy.
2012	C21	Rene, TAPSOBA. 2012. <i>Does Inflation Targeting Matter for Attracting Foreign Direct Investment into Developing Countries?</i> CERDI, Working Papers: 201203. This paper investigates the effect of Inflation Targeting (IT) on Foreign Direct Investment (FDI). Based on panel data of 53 developing countries over the period 1980-2007, this study is the first, to the best of the author's knowledge, to evaluate directly the effect of IT on FDI. Using a variety of propensity scores-matching methods which allow controlling for selfselection in policy adoption, it finds that the treatment effect of IT on FDI is positive, statistically significant and robust to a set of alternative specifications. In terms of policy recommendations, this finding therefore suggests that if well implemented, IT adoption can be a legitimate part of the policy toolkit available to policymakers in developing countries in their competition to attract more FDI.
2012	C71	Allen, Jason, James Chapman, Federico Echenique, and Matthew Shum. 2012. <i>Efficiency and Bargaining Power in the Interbank Loan Market</i>. Bank of Canada, Working Papers. Using detailed loan transactions-level data we examine the efficiency of an overnight interbank lending market, and the bargaining power of its participants. Our analysis relies on the equilibrium concept of the core, which imposes a set of no-arbitrage conditions on trades in the market. For Canada we show that while the market is fairly efficient, some degree of inefficiency persists throughout our sample. The level of inefficiency matches distinct phases of both the Bank of Canada's operations as well as phases of the 2007-2008 financial crisis, where more liquidity intervention implies more inefficiency. We find that bargaining power tilted sharply towards borrowers as the financial crisis progressed, and towards riskier borrowers. This supports a nuanced version of the Too-Big-To-Fail story, whereby participants continued to lend to riskier banks at favorable rates, not because of explicit support to the riskier banks provided by governmental authorities, but rather due to the collective self-interest of these banks.
2012	F62 F66	Subbarao, Duvvuri. 2012. "Le défi de la mondialisation: Quelques réflexions du point de vue de la banque centrale indienne. (The Challenge of Globalization: Some Reflections from the Reserve Bank Perspective. With English summary.)" <i>Revue d'Economie Financière</i>, 0(107): 249-61. This paper draws a picture of the Indian vision of globalization, along with the advantages and risks for Indian economy and society. From a long term perspective, current globalization does not appear as either unique or irreversible. Political considerations could call it into question if the advantages obtained in some countries do not compensate for the harmful social consequences, such as the abolition of jobs in developed countries. Over and above the exchange of non-financial goods and services, the question of the risks engendered by financial liberalization is also posed. The latter can contribute a lot to an economy such as India's, but this implies the implementation of a complex monetary policy by the Reserve Bank of India if rapid growth, beneficial for society as a whole, is to be achieved.
2012	H12	Drudi, Francesco, Alain Durre, and Francesco Paolo Mongelli. 2012. <i>The interplay of economic reforms and monetary policy: the case of the Euro area</i>. European Central Bank, Working Paper Series: 1467. The world has been struck by a mutating systemic financial crisis that is unprecedented in terms of financial losses and fiscal costs, geographic reach, and speed and synchronisation. The crisis from August 2007 to date can be divided into three main phases: the financial turmoil from August 2007 to the collapse of Lehman Brothers; the global financial crisis from September 2008 until spring 2010; and the euro area sovereign debt crisis from spring 2010 to the current period. While each phase has brought significant challenges, the current sovereign debt crisis has been the most critical stage for the euro area. It has brought unprecedented challenges for the monetary union and triggered extraordinary adjustments in both monetary policy and institutional arrangements at the euro area level. The purpose of this article is to outline the features of each crisis phase, to describe the actions taken by the European Central Bank (ECB) during each phase and to explain the rationale for such measures. It also discusses the need to strengthen further the economic union in order to guarantee the sustainability of the monetary union of the euro area. In this respect, it is argued that the recent institutional adjustments made at the EU level would have been necessary independently of the financial crisis.
2012	H12	White, William R. 2012. <i>Credit Crises and the Shortcomings of Traditional Policy Responses</i>. OECD Publishing, OECD Economics Department Working Papers: 971. Economic downturns which have their roots in preceding credit excesses and debt overhang have tended historically to be long lasting, whether the financial sector remained healthy or not. There are no good reasons to believe the current global crisis will be any different. Moreover, it is argued in this paper that the policy responses to the crisis to date, both macroeconomic and structural, will not succeed in restoring sustainable growth. Monetary and fiscal stimulus might raise aggregate demand in the short run, but they contribute to higher debt levels which are already working increasingly in the opposite direction. Structural policies intended to maintain pre crisis production patterns, both in the financial and industrial sectors, ignore the unsustainability of those structures in the first place. Alternative policies are needed to meet the G 20's goal of "strong, sustainable and balanced growth". They include more international cooperation between creditor and debtor countries (on both exchange rates and production structures), more recourse to explicit debt restructuring (for both households and sovereigns), and structural policies to raise potential growth and make debts more sustainable. Unfortunately, there remain formidable practical and political obstacles to pursuing such policies. Future debt crises of the current magnitude could be avoided by using monetary, macro prudential and fiscal policies more symmetrically over the business cycle. Relative to past behaviour, this would imply more vigorous resistance to credit financed upswings, and a greater willingness to accept the cleansing effect of minor downswings. Policies to ensure financial stability are important but secondary.
2012	H43	Lucas, Deborah. 2012. "Valuation of Government Policies and Projects." <i>Annual Review of Financial Economics</i>, 4(1): 39-58. Governments play a central role in the allocation of capital and risk in the economy. Evaluating the cost to taxpayers of government investments requires an assumption about the government's cost of capital. Governments often take their borrowing rate to be their cost of capital, which implicitly treats the market risk associated with their activities as having no cost to taxpayers. This article reviews the theoretical and practical rationale for treating market risk as a cost to governments, presents an interpretive review of the growing literature that applies the concepts and tools of modern finance to evaluating the costs of government policies and projects, and suggests directions for future research. Examples considered include deposit insurance, Fannie Mae and Freddie Mac, the Federal Reserve's emergency lending facilities, student loans, real infrastructure investments, and public pension plans.
2012	K14	Homburg, Stefan. 2012. "Der neue Kurs der Europäischen Zentralbank." <i>Wirtschaftsdienst</i>, 92(10): 673-77. In September 2012, the European Central Bank (ECB) announced its new "Outright Monetary Transactions (OMT)" programme, which entails unlimited purchases of member states' government bonds. Following an idea by George Soros, Goldman Sachs and Citigroup, the ECB intends to sterilise these purchases through the liabilities side of its balance sheet, i.e., through the issuance of ECB bonds.

Year	DE	Title and Abstract
		The article analyses this plan and argues that the ECB is introducing a second unlimited European Stability Mechanism (ESM). This clearly violates European law and is likely to be punishable under German criminal law.

2012	M11	Lundin, Johan F. 2012. "Redesigning a Closed-Loop Supply Chain Exposed to Risks." <i>International Journal of Production Economics</i> , 140(2): 596-603. Supply chain management includes coordination and motivation of independently operating partners. Therefore, it is important to align logistics structures, processes, and incentives, especially when making major changes involving those components. Traditionally, cost, quality, and service have served as prioritized performance indicators for supply chains, but lately risk is also taken into consideration (Tang, 2006), especially when studying risk-exposed supply chains. This paper presents a case study of a cash supply chain (CSC). A CSC provides society with notes and coins (Rajamani et al., 2006), which typically involves two parties working together: a central bank and a group of private actors (private banks and logistics service/security providers). Together, they form a closed-loop supply chain (see Guide and Van Wassenhove, 2006), which through their storage facilities and transport means supply cash to their customers (ATMs, bank branches, and retailers), whom in turn enables society's cash consumption. The CSC studied in this paper has during the last couple of years gone through several design changes in network structure (e.g., reducing number of storage facilities), processes (outsourcing), and incentive mechanisms (payment schemes and policies). Most design changes were carried out in order to decrease number of transports from and to central bank storage facilities, nevertheless some of them led to unintended effects (so-called misalignments). Therefore, the purpose of this paper is to present a model that determines effects caused by design changes in a CSC.
2012	M42	ELDaly, Mohamed Khaled Amr. 2012. "Responsibility of Egyptian Banks' Auditors for Going Concern Assumption in Light of Egyptian Central Bank Law No. 88/2003." <i>International Journal of Economics and Accounting</i> , 3(3-4): 344-64. In 2003, the Egyptian Central Bank Law No. 88/2003 took place and threatened the continuity of stressed banks by permitting the CBE to merge the stressed banks into forced mergers. As a result, the CBE merged six of the Egyptian troubled banks and evaluated their shareholders equity with zero that leads the banks' investors to lose millions of Egyptian pounds and lose the trust in the Egyptian capital market. Accordingly, this paper aims to investigate to what extent the banks' external auditors fulfil their obligations toward the going concern assumption after the Central Bank Law No. 88/2003 took place. The Egyptian banks have been classified into three classes as follows: 1) Class A banks that were not endangered by the new legislation because their capital exceeded the requirements of Law 88/2003 (excluded from the population). 2) Class B banks that were threatened by the law, however, they successfully complied with the requirements during the allowance period given by CBE (ended July 2005). 3) Class C banks that failed to comply with the legislation and are subject to hostile merger under CBE supervision. The main findings show that for class B banks: only 38% of the audit reports are in conformity to the auditing standard 570-going concern. While for class C banks: only 11% of the audit reports are conformity to the ISA 570. The main findings are consistent with prior researches that provide evidence to the lack of commitments to the international standards among the Egyptian auditors.
2012	N72	THE SAME AS L81 CV: Park, Haelim, and Gary Richardson. 2012. "Retail Trade by Federal Reserve District, 1919 to 1939: A Statistical History."

2012	N94	Shelburne, Robert. 2012. <i>Restoring Stability to Europe</i> . UNECE, ECE Discussion Papers Series: 2012_3. The eurozone is in political and economic crisis. This is due to the inadequate design of the institutional structure of the eurozone and to the current poor implementation of macroeconomic policy. In designing the eurozone, well established principles of economics were ignored and major decisions were based primarily upon political considerations. Thus it was only a matter of time before these defects would become apparent. In addressing the current crisis that has developed policy makers have misdiagnosed the causes of the crisis and implemented solutions that are largely counterproductive to solving it. This paper describes the underlying factors that led to the inadequate design and improper macroeconomic response and explains what will be necessary in order to create an institutional structure and macroeconomic policy framework that can restore economic stability and growth to the region.
2012	O18	Mudoi, Diganta K. 2012. "A Study and Analysis of Financial Inclusion in India." <i>International Journal of Research in Commerce and Management</i> , 3(9): 91-94. Financial inclusion is an important process to attain the goal of inclusive growth. Accordingly, the Reserve Bank of India has made sustained efforts to increase the penetration of formal financial services in unbanked areas, while continuing with its policy of ensuring adequate but viable flow of credit to priority sectors of the economy. Financial inclusion is delivery of banking services at an affordable cost to the vast sections of underprivileged and low income groups. By financial inclusion we mean the provision of affordable financial services, namely access to payments and remittance facilities, savings, loans, and insurance services by the formal financial system to those who tend to be excluded. Significance of financial inclusion arises from the problem of financial exclusion of nearly 3billion people from the financial services across the world, with only 34percent population engaged in formal banking. India has, 135 million financially excluded households, the second highest after china. The present paper is a humble attempt to find out the causes of financial exclusion in India, analyze the extent and magnitude of financial inclusion in the context of India and suggest measures to solve the problem of financial exclusion in India.
2012	O34	Liu, Lanbiao, and Jingjia Zhang. 2012. "The Investment Portfolio of China's Foreign Reserves--An Endogenous Perspective of Foreign Reserves Flow Cycle. (In Chinese. With English summary.)." <i>Jingji Yanjiu/Economic Research Journal</i> , 47(4): 137-48. This article has established a Stackelberg and a Cournot game model, involving the central banks and financial markets of China and the US, as well as the real economic sector of China, in order to depict a cycle of the foreign investment of China's foreign exchange reserves through the perspective of the essential differences of China and the US. In addition, we have simulated the optimal investment portfolio of China's foreign reserves and its contribution to China's domestic economy. The results have shown that the risky assets investment of China's foreign exchange reserves on the US assets will affect the proportion of China's reserves which transform indirectly into the FDI to China from the US. However, the reaction of our central bank has been relatively slow. Therefore, in order to enable our central bank to gain profits, we suggest that it is necessary to bring down the CRRR coefficient of our residents, and improve our financial market development as well.
2012	Q47	Reitz, Stefan, Jan-Christoph Rulke, and Georg Stadtmann. 2012. "Nonlinear Expectations in Speculative Markets--Evidence from the ECB Survey of Professional Forecasters." <i>Journal of Economic Dynamics and Control</i> , 36(9): 1349-63. Chartist and fundamentalist models have proven to be capable of replicating stylized facts on speculative markets. In general, this is achieved by specifying nonlinear interactions of otherwise linear asset price expectations of the respective trader groups. This paper investigates whether or not regressive and extrapolative expectations themselves exhibit significant nonlinear dynamics. The

Year	DE	Title and Abstract
		empirical results are based on a new data set from the European Central Bank Survey of Professional Forecasters on oil price expectations. In particular, we find that forecasters form destabilizing expectations in the neighborhood of the fundamental value, whereas expectations tend to be stabilizing in the presence of substantial oil price misalignment.
2012	Q54	McKibbin, Warwick J. 2012. "A New Climate Strategy beyond 2012: Lessons from Monetary History." <i>Singapore Economic Review</i>, 57(3): 1-18. The Kyoto Protocol was the outcome of many years of multilateral negotiation and political compromise with the ultimate aim of reducing the risk of dangerous climate change. Unfortunately, most of the countries that ratified the Kyoto Protocol have not taken effective action to curb greenhouse gas emissions, with many Kyoto countries not looking likely to reach their targets. There is also a lack of enthusiasm from major developing countries to take on the binding targets that form the basis of the Kyoto Protocol Approach. This has raised serious doubts about the viability of the Kyoto policy of committing countries to targets and timetables especially as a model for the current negotiations. As the science becomes more compelling that action is needed to curb greenhouse gas emissions, countries are beginning to look for more sustainable alternatives for the period beyond 2012. This paper outlines the key features that are needed in a new climate change framework beyond Kyoto drawing on lessons from monetary history. Using the analogy to the way modern central banks run monetary policy, it outlines an alternative to the Kyoto Protocol, which is a system of national climate policies coordinated around a common global price for carbon.
2012	Q54	McGregor, Peter G., J. Kim Swales, and Matthew A. Winning. 2012. "A Review of the Role and Remit of the Committee on Climate Change." <i>Energy Policy</i>, 41(1): 466-73. Domestic action on climate change requires a combination of solutions, in terms of institutions and policy instruments. One way of achieving government carbon policy goals may be the creation of an independent body to advise on, or set, monitor policy. This paper critically assesses the Committee on Climate Change (CCC), which was created in 2008 as an independent body to help move the UK towards a low-carbon economy. We look at the motivation for its creation. In particular, we consider its ability to overcome a time-inconsistency problem by comparing it to another independent body, the Monetary Policy Committee of the Bank of England. In practice the CCC appears to be the "inverse" of the Monetary Policy Committee, in that it advises on what the policy goal should be rather than being held responsible for achieving it. The CCC incorporates both advisory and monitoring functions to inform government and achieve a credible carbon policy over a long time frame. This is a similar framework to that adopted by Stern (2006), but the CCC operates on a continuing basis and also incorporates a unique climate change monitoring function.
2012	R33	CV; Bernanke, Ben, and Mark Gertler. 2012. "Monetary Policy and Asset Price Volatility." In <i>New Perspectives on Asset Price Bubbles: Theory, Evidence, and Policy</i>, ed. Douglas D. Evanoff, George G. Kaufman and A. G. Malliaris, 173-210. Oxford and New York: Oxford University Press.
2013		
2013	B15	Adair, Philippe. 2013. "Cycle du credit et politique monetaire: Le monetarisme de John Rogers Commons. (Credit Cycle and Monetary Policy: John Rogers Commons as a 'Monetarist'. With English summary.)." <i>Cahiers d'Economie Politique</i>, 0(64): 45-74. Commons sketches an institutionalist theory of property based on debt, that is a potential of expected income, and the vector of which is the monetary system. His monetary theory of the credit cycle was inspired from Wicksell and Fisher's debt-deflation theory, rather than from Fisher's quantity theory. According to Commons, the Central Bank is the key institution, whose role is to lead an active policy controlling the quantity of money based on the management of interest rates. Commons may be considered as a "monetarist," who rejects both the gold standard rule and the real bills doctrine.
2013	C54	Angrist, Joshua D., Oscar Jorda, and Guido Kuersteiner. 2013. <i>Semiparametric Estimates of Monetary Policy Effects: String Theory Revisited</i>. National Bureau of Economic Research, Inc. NBER Working Papers: 19355. We develop a flexible semiparametric time series estimator that is then used to assess the causal effect of monetary policy interventions on macroeconomic aggregates. Our estimator captures the average causal response to discrete policy interventions in a macro-dynamic setting, without the need for assumptions about the process generating macroeconomic outcomes. The proposed procedure, based on propensity score weighting, easily accommodates asymmetric and nonlinear responses. Application of this estimator to the effects of monetary restraint suggest contractionary policy slows real economic activity. By contrast, the Federal Reserve's ability to stimulate real economic activity through monetary expansion appears to be much more limited. Estimates for recent financial crisis years are similar to those for the earlier, pre-crisis period.
2013	C65	CV; Garnier, Josselin, George Papanicolaou, and Tzu-Wei Yang. 2013. "Diversification in Financial Networks May Increase Systemic Risk." In <i>Handbook on Systemic Risk</i>, ed. Jean-Pierre Fouque and Joseph A. Langsam, 432-43. Cambridge and New York: Cambridge University Press.
2013	C68	Blassel, Alexis, and Aurelien Poissonnier. 2013. <i>The Frontier of indeterminacy in a Neo-Keynesian Model with Staggered Prices and Wages</i>. Centre de Recherche en Economie et Statistique, Working Papers: 2013-28. We consider a neo-keynesian model with staggered prices and wages. When both contracts exhibit sluggish adjustment to market conditions, the policy maker faces a trade-off between stabilizing three welfare relevant variables: output, price inflation and wage inflation. We consider a monetary policy rule designed accordingly: the Central Banker can react to both inflations and the output gap. We generalize the Taylor principle in this case: it embeds the frontier of determinacy derived with staggered prices only, it is also symmetric in price and wage inflations. It follows that when staggered labour contracts are considered, wage inflation is also an illegible and efficient target for the Central Banker.
2013	D10	van der Cruysen, Carin, Jakob de Haan, and David-Jan Jansen. 2013. <i>Trust and Financial Crisis Experiences</i>. Netherlands Central Bank, Research Department, DNB Working Papers. Using eight annual surveys from the Netherlands between 2006 and 2013, we examine whether financial crisis experiences affect trust in banks, trust in the banking supervisor, and generalized trust. Adverse experiences during the financial crisis do not only directly lower trust in banks, but also have a negative effect on generalized trust. Customers of a bank that ran into problems have less trust in banks than respondents without this experience. Our results also indicate that respondents who were customer of a bank that failed have a significantly stronger decline of generalized trust than respondents without this experience. Personal financial crisis experiences do not have a significant effect on trust in the banking supervisor.
2013	E16	Hayden, F. Gregory. 2013. "Network Analysis for Modern Monetary Theory." <i>Journal of Economic Issues</i>, 47(2): 575-84. This article integrates Scott Fullwiller's two social fabric matrices for Federal Reserve and Treasury operations to help establish a number of results. First, the resulting network demonstrates that the components are involved in an intense, extensive, and complex network of interconnections. Second, given the numerous pathways in the network, it becomes clear that one needs to identify specific pathways when undertaking a discussion. Third, the article identifies variant criteria that guide the rules, regulations, and requirements of real-world monetary operations, and clarifies that the conflict between normative belief criteria and variant criteria is crucial for understanding the formulation of alternative monetary policies. Fourth, the article establishes that, beyond social

Year	DE	Title and Abstract
		criteria, technological criteria also deliver rules, regulations, and requirements to the institutions. Fifth, it further refines the social fabric matrix itself. Finally, the integrated matrix provides a base to which components may be added with a view to pursuing future research interests.
2013	E16	Wang, Li. 2013. "Impact of Change in the Deposit Reserve Ratio on Chinese Macro-economy. (In Chinese. With English summary.)." <i>Journal of Quantitative and Technical Economics</i>, 30(5): 152-60. This paper extends a conventional CGE model to a financial CGE model by joining the two agents of commercial banks and central banks, as well as detailed description of a savings-investment mechanism. Based on this framework, we establish a Financial Social Accounting Matrix and simulate the impact of changes in the deposit reserve ratio on Chinese macro-economy and sectoral economy. The simulation results show that change in deposit reserve ratio is an effective tool to control and adjust Chinese macro-economy in some degree. Impact of decreasing the deposit reserve ratio has stronger effect on the economy than that of increasing the ratio. In terms of the impact on the sectoral economy, construction sector is the most sensitive sector to the change in deposit reserve ratio followed by service sector and manufacturing sector, the response of the agricultural sector is relatively weaker than other sectors.
2013	F39	Aron, Janine, Kenneth Creamer, John Muellbauer, and Neil Rankin. 2013. <i>Exchange Rate Pass-Through to Consumer Prices in South Africa: Evidence from Micro-Data</i>. C.E.P.R. Discussion Papers, CEPR Discussion Papers: 9735. A sizeable literature examines exchange rate pass-through to disaggregated import prices but very few micro-studies focus on consumer prices. This paper explores exchange rate pass-through to consumer prices in South Africa during 2002-2007, using a unique data set of highly disaggregated data at the product and outlet level. The paper adopts an empirical approach that allows pass-through to be calculated over various horizons, including controls for domestic and foreign costs. It studies how pass-through differs across types of consumption goods and services and draws some aggregate implications about pass-through, using actual weights from the CPI basket. The heterogeneity of pass-through for different food sub-components and the role of switches between import and export parity pricing of maize is investigated and found significant for five out of ten food sub-components. Overall pass-through to the almost 63 percent of the CPI covered is estimated at about 30 percent after two years, but is higher for food.

2013	F65	Gudmundsson, Mar. 2013. "International and EU Reform Proposals and Fault Lines in Cross-Border Banking." <i>Economic and Financial Review</i>, 20(3): 135-44. As a response to the financial crisis, the EU has been considering a banking union that will include common supervision and deposit insurance as well as a common resolution mechanism to deal with failing banks. This paper argues as long as global risks and EU flaws are not dealt with, individual countries are forced to take action to protect themselves. Such action might contribute further to the retreat of cross-border banking and financial globalisation more generally. The paper recommends that the issue of global liquidity provision to banks needs further exploration. If countries are increasingly taking unilateral action to protect themselves, an authority--probably the IMF--must monitor the process.

2013	L16	Lacic, Slobodan. 2013. "Concentration in Banking--A Paradigm of Manipulative Control and Power." <i>Montenegrin Journal of Economics</i>, 9(1): 53-62. The paper starts from the hypothesis that concentration of banking industry and ownership is a ground for proliferation of financial control and power, enabling financial clique to abuse the banking and credit system. Banking super-entities ensure manipulative pattern of functioning based on the monopolistic standard of demand of money, mechanism of interest rates and derivative market. Current financial crisis has deepened the concentrated system of relations and redistribution. The practice based on fraud and deception remained a cornerstone of strengthening the Anglo-Saxon banking and industrial empire to the current shaken model of financialization. Official monetary authorities, under the control of "sophisticated" individuals and semi-secret organizations, provide safe traditional and unconventional monetary and liquidity mechanism to corporate bankers.
		Mercier, Fabien, and Stephan Sauer. 2013. "Optimal Central Securities Depository Reshaping toward TARGET2-Securities." <i>Journal of Financial Market Infrastructures</i>, 2(2): 3-51. TARGET2-Securities (T2S) is the single and harmonized IT platform for securities settlement in central bank money, developed by the Eurosystem to promote integration in the European post-trading industry, and will go live in 2015. Central securities depositories (CSDs) joining T2S thus face the need to determine the degree to which they should reshape, that is, adapt their own IT infrastructure, human resources and business strategy to T2S. A more complete reshaping entails higher immediate fixed costs, but allows us to benefit the most from the cost reduction allowed by T2S. In this paper we use a game-theoretic approach to model the strategic choice of the CSDs. We then derive several results from this model. In particular, we give closed-form solutions for the degree of optimal reshaping and the optimal prices set in the

Year	DE	Title and Abstract
		unique equilibrium if the time horizon is finite. In the case of an infinite horizon we give a sufficient and necessary condition for the existence of another subgame perfect Nash equilibrium in which CSDs continually delay the decision to reshape. We argue this equilibrium is not robust and provide a condition under which a given CSD will always reshape, whatever the other CSDs' strategy. We note that by adjusting the cost function and the interpretation of the reshaping parameter, the same game-theoretic framework can be used to model the decision to join or not to join T2S.
2013	M31	Naqvi, Mona, and James Southgate. 2013. "Banknotes, Local Currencies and Central Bank Objectives." <i>Bank of England Quarterly Bulletin</i>, 53(4): 317-25. A few towns and cities in the United Kingdom have set up local currency schemes to promote local sustainability. The schemes issue paper instruments with some similar design features to banknotes. This article explains how these instruments differ from banknotes. The size, structure, and backing arrangements of existing schemes mean that local currencies are unlikely to pose a risk to the Bank's monetary and financial stability objectives. Nonetheless, consumers should be aware that local currency instruments do not benefit from the same level of consumer protection as banknotes.
2013	M50	CV: Kellermann, A. Joanne, and Robert H. J. Mosch. 2013. "Good Supervision and Its Limits in the Post-Lehman Era." In <i>Financial Supervision in the 21st Century</i>, ed. A. Joanne Kellermann, Jakob de Haan and Femke de Vries, 1-16. New York and Heidelberg: Springer.
2013	N46	Araoz, Maria Florencia. 2013. "La calidad institucional en Argentina en el largo plazo. (Institutional Quality in Argentina in the Long Run. With English summary)." <i>Revista de Historia Economica</i>, 31(1): 73-109. This paper presents a multidimensional indicator of institutional quality in Argentina for the period 1862-2008. Initially, it describes a set of variables that aim to measure issues related to the legal framework prevailing in Argentina and its implementation, such as changes in the Constitution and the provincial Constitutions, declarations of state of siege and federal interventions, freedom of press, central bank independence. The indicator is then constructed through the principal component analysis. The results suggest that periods of high institutional quality in Argentina coincided with the most expansion and relative progress. In other words, poor institutional quality would not only be reflected in lower growth rates but also compromises the ability to follow those countries with the best performance.
2013	N47	Hunter, Murray. 2013. "Who Really Rules Australia?: Donald Horne Revisited." <i>Journal of Self-Governance and Management Economics</i>, 1(2): 54-89. This paper looks back at Donald Horne's article "Who rules Australia?" written back in 1985 and re-examines the Australian political, financial, and business environment to look at who really rules Australia today.
2013	N51	Hanes, Christopher, and Paul W. Rhode. 2013. "Harvests and Financial Crises in Gold Standard America." <i>Journal of Economic History</i>, 73(1): 201-46. Most American financial crises of the postbellum gold standard era were caused by fluctuations in the cotton harvest due to exogenous factors such as weather. The transmission channel ran through export revenues and financial markets under the pre-1914 monetary regime. A poor cotton harvest depressed export revenues and reduced international demand for American assets, which depressed American stock prices, drained deposits from money center banks and precipitated a business cycle downturn—conditions that bred financial crises. The crises caused by cotton harvests could have been prevented by an American central bank, even under gold standard constraints.
2013	Q12	Thirumamagal, K., and T. M. Swaminathan. 2013. "Financial Inclusion in India--A Road Ahead." <i>International Journal of Research in Commerce and Management</i>, 4(5): 82-87. Villages are the backbone of our economy. The soul of India lives in its villages. Empowerment of farmers leads to economic development of any country. However, malnourishment, suicide and health problems of farmers are shocking realities that still exist in many rural areas in our country and this is considered to be a serious threat to the economic progress of our country. The farmers already emaciated due to malnutrition further face the problem of inadequate finance. Financial assistance from the government will relieve them from several problems. Many of the farmers are under the clutches of unscrupulous money lenders which is surprising. They are blissfully unaware of financial services provided by our banks. Over the last few years, Government of India has given significant importance to the idea of financial inclusion. The need for the study of financial inclusion is to create a market driven banking sector with adequate focus on economic development. The objective of the study is to analyze the linkage between finance and economic development and to study the status of financial inclusion in India. Hope that the importance of Financial Inclusion is realized by all stakeholders responsible for making the banking process a success and that whatever strategies suggested will be pursued in right earnest by everyone in our country.

Table E59.F Examples of Publications according to New Links in 2006—2013

Year	DE	Title and Abstract
2006		
2006	C62 F41	Cornell, Christopher M., and Raphael H. Solomon. 2006. <i>Are Currency Crises Low-State Equilibria? An Empirical, Three-Interest-Rate Model</i> . Bank of Canada, Working Papers. Suppose that the dynamics of the macroeconomy were given by (partly) random fluctuations between two equilibria: "good" and "bad." One would interpret currency crises (or recessions) as a shift from the good equilibrium to the bad. In this paper, the authors specify a dynamic investment-savings-aggregate-supply (IS-AS) model, determine its closed-form solution, and examine numerically its comparative statics. The authors estimate the model via maximum likelihood, using data for Argentina, Canada, and Turkey. Since the data show no support for the multiple-equilibrium explanation of fluctuations, the authors cast doubt on the third-generation models of currency crisis.

Year	DE	Title and Abstract
2007		
2007	C73 D82 G21	Gu, Chao. 2007. <i>Herding and Bank Runs</i> . Department of Economics, University of Missouri, Working Papers: 0716. Traditional models of bank runs do not allow for herding effects, because in these models withdrawal decisions are assumed to be made simultaneously. I extend the banking model to allow a depositor to choose his withdrawal time. When he withdraws depends on his liquidity type (patient or impatient), his private, noisy signal about the quality of the bank's portfolio, and the withdrawal histories of the other depositors. In some cases, the optimal banking contract permits herding runs. Some of these "runs" are efficient in that the bank is liquidated before the portfolio worsens. Others are not efficient; these are cases in which the herd is misled.
2009		
2009	E32 E37	Abberger, Klaus, Wolfgang Nierhaus, and Shynar Shaikh. 2009. <i>Findings of the Signal Approach for Financial Monitoring in Kazakhstan</i> . CESifo Group Munich, CESifo Working Paper Series: CESifo Working Paper No. 2774. This study concentrates on the signal approach for Kazakhstan. It focuses on the properties of individual indicators prior to observed currency crises. The indicators are used to build composite indicators. An advanced approach uses principal components analysis for the construction of composite indicators. Furthermore, the common signal approach is improved by robust statistical methods. The estimation period reaches from 1997 to 2007. It is shown that most of the composite indicators are able to flag the reported crises at an early stage. In a second step it is checked whether the most recent crisis in 2009 is signalled in advance.
2010		
2010	B31 E39	Heymann, Daniel. 2010. "Fluctuaciones perifericas: Notas sobre el analisis macroeconomico de Raul Prebisch. (Peripheral Fluctuations: Notes on the Macroeconomic Analysis of Raul Prebisch. With English summary)." <i>Ensayos Economicos</i> , 0(57-58): 7-32. The work of Prebisch covers a long period of time, during which the configuration of Argentina's economy as well as the contents and methods of economic theory underwent significant changes. His concern to explore the mechanisms of economic fluctuations in peripheral economies, particularly Argentina, and their analytical implications, is expressed very early and throughout his voluminous work. Apart from the diversity of emphasis and approaches, and the time lag between different pieces of work, several continuities emerge in central aspects of his arguments, particularly with regard to the primacy of external impacts in the economic fluctuations of the periphery, and to the specific processes which operate in these economies in comparison to the economic centers. These arguments motivate Prebisch's reservations concerning the Keynesian emphasis on inconsistencies between savings and investments as the central determinants of changes in economic activity. This paper deals with the contributions of Prebisch in the macroeconomic field on the basis of a subset of his writings and, in particular, the detailed lecture notes of a course given at University of Buenos Aires in 1944, about monetary theory and policy and business cycle analysis, with special reference to Argentina's experience. The discussions carried out by Prebisch on those topics show his effort to use abstract reasoning in order to reveal, not to hide, concrete economic processes and, at the same time, it presents arguments relating to particular issues supported by analytical frameworks built upon an understanding and a critique of the current theory. The mix of theoretical reasoning and practical considerations present in the work of Prebisch carries an integration of elements that are rarely found together, and invites the reader to continue to think and to analyze further. The methods, techniques, and approaches of economic analysis may have changed, but Prebisch should not be read with an archaeological perspective; his work continues to talk about issues and problems which remain intellectually challenging and relevant in practice.
2012		
2012	C12	Cho, In-Koo, and Ken Kasa. 2012. <i>Model Validation and Learning</i> . Department of Economics, Simon Fraser University, Discussion Papers. This paper studies adaptive learning with multiple models. An agent operating in a self-referential environment is aware of potential model misspecification, and tries to detect it, in real-time, using an econometric specification test. If the current model passes the test, it is used to construct an optimal policy. If it fails the test, a new model is selected from a fixed set of models. As the rate of coefficient updating decreases, one model becomes dominant, and is used 'almost always'. Dominant models can be characterized using the tools of large deviations theory. The analysis is applied to Sargent's (1999) Phillips Curve model.
2012	D84	Smith, Eric, and Martin Shubik. 2012. <i>Runs, Panics and Bubbles: Diamond Dybvig and Morris Shin Reconsidered</i> . Cowles Foundation for Research in Economics, Yale University, Cowles Foundation Discussion Papers: 1869. The basic two-noncooperative-equilibrium-point model of Diamond and Dybvig is considered along with the work of Morris and Shin utilizing the possibility of outside noise to select a unique equilibrium point. Both of these approaches are essentially nondynamic. We add an explicit replicator dynamic from evolutionary game theory to provide for a sensitivity analysis that encompasses both models and contains the results of both depending on parameter settings.
2012	E31 E41	Hillinger, Claude, Bernd Sussmuth, and Marco Sunder. 2012. <i>The Quantity Theory of Money and Friedmanian Monetary Policy: An Empirical Investigation</i> . CESifo Group Munich, CESifo Working Paper Series: 3754. We introduce an approach for the empirical study of the quantity theory of money (QTM) that is novel both with respect to the specific steps taken as well as the general methodology employed. Empirical studies of the QTM have focused directly on the relationship between the rate of change of the money stock and inflation. We believe that this is an inferior starting point for several reasons and focus instead on the Cambridge form of the QTM. We find that the coefficient k fluctuates strongly in the short run, but has a low and steady rate of change in the long run, which makes the QTM a useful instrument for the long-run control of inflation. An important finding that contradicts all of the previous literature is that the QTM holds for low inflation as well as for high inflation. We discuss how our findings relate to monetarism generally and propose an adaption of McCallum's rule for a Friedmanian monetary policy.

2013	C11	Eijffinger, S. C. W., R. J. Mahieu, and L. B. D. Raes. 2013. <i>Inferring Hawks and Doves from Voting Records</i> . Tilburg University, Center for Economic Research, Discussion Paper: 2013-024. We analyze revealed policy preferences in monetary policy committees. From the voting records of the Bank of England we estimate the policy preferences with spatial models of voting. We analyze systematic patterns in these policy preferences. We find that internal committee members tend to hold centrist policy

Year	DE	Title and Abstract
		preferences while pronounced policy preferences are generally held by external members. Committee members with a career in academia and the industry hold more diverse policy preferences whereas committee members with central bank experience exhibit little heterogeneity in preferences. The median voter does not vary systematically according to career background.
2013	C11	Eijffinger, S. C. W., R. J. Mahieu, and L. B. D. Raes. 2013. <i>Estimating the Preferences of Central Bankers: An Analysis of Four Voting Records</i> . Tilburg University, Center for Economic Research, Discussion Paper: 2013-047. This paper analyzes the voting records of four central banks (Sweden, Hungary, Poland and the Czech Republic) with spatial models of voting. We infer the policy preferences of the monetary policy committee members and use these to analyze the evolution in preferences over time and the differences in preferences between member types and the position of the Governor in different monetary policy committees.

Year	DE	Title and Abstract
2006		
2006	E27 J11	Cournede, Boris, and Frederic Gonand. 2006. <i>Restoring Fiscal Sustainability in the Euro Area: Raise Taxes or Curb Spending?</i> . OECD Economics Department, OECD Economics Department Working Papers: 520. With population ageing, fiscal consolidation has become of paramount importance for euro area countries. Consolidation can be pursued in various ways, with different effects on potential growth, which itself will be dragged down by ageing. A dynamic general equilibrium model with overlapping generations and a public finance block (including a pay-as-you-go pension regime, a health care system, non ageing-related public spending and a stock of debt to be repaid) is used to compare the macroeconomic impact of four scenarios: a) increasing taxes to finance unchanged pensions and repay public debt, b) lowering future pension replacement rates and repaying public debt through a lower ratio of non ageing-related outlays to GDP, c) raising the retirement age by 1.25 years per decade and increasing taxes only to pay off debt, and d) increasing the retirement age by 1.25 years per decade and paying off debt through a lower ratio of non ageing-related expenditure to GDP. This last scenario is the one where growth is strongest: with gradual increases in the retirement age and spending restraint, average GDP growth in the 2010s would be 0.34 percentage point stronger than in a scenario where fiscal consolidation is achieved exclusively through tax hikes. The appropriate conclusion from the model is not that public spending is bad per se, but that cuts to lower-priority spending items can deliver surprisingly large income gains compared with the alternative of raising taxes.
2006	G13	Snowberg, Erik, Justin Wolfers, and Eric Zitzewitz. 2006. <i>Partisan Impacts on the Economy: Evidence from Prediction Markets and Close Elections</i> . National Bureau of Economic Research, Inc, NBER Working Papers: 12073. Political economists interested in discerning the effects of election outcomes on the economy have been hampered by the problem that economic outcomes also

Year	DE	Title and Abstract
		influence elections. We sidestep these problems by analyzing movements in economic indicators caused by clearly exogenous changes in expectations about the likely winner during election day. Analyzing high frequency financial fluctuations on November 2 and 3 in 2004, we find that markets anticipated higher equity prices, interest rates and oil prices and a stronger dollar under a Bush presidency than under Kerry. A similar Republican-Democrat differential was also observed for the 2000 Bush-Gore contest. Prediction market based analyses of all Presidential elections since 1880 also reveal a similar pattern of partisan impacts, suggesting that electing a Republican President raises equity valuations by 2-3 percent, and that since Reagan, Republican Presidents have tended to raise bond yields.
2006	G31 G38	Henry, Peter Blair. 2006. <i>Capital Account Liberalization: Theory, Evidence, and Speculation</i> . National Bureau of Economic Research, Inc, NBER Working Papers: 12698. Writings on the macroeconomic impact of capital account liberalization find few, if any, robust effects of liberalization on real variables. In contrast to the prevailing wisdom, I argue that the textbook theory of liberalization holds up quite well to a critical reading of this literature. The lion's share of papers that find no effect of liberalization on real variables tell us nothing about the empirical validity of the theory, because they do not really test it. This paper explains why it is that most studies do not really address the theory they set out to test. It also discusses what is necessary to test the theory and examines papers that have done so. Studies that actually test the theory show that liberalization has significant effects on the cost of capital, investment, and economic growth.
2006	H25	Kehoe, Patrick, and Varadarajan V. Chari. 2006. <i>Modern Macroeconomics in Practice: How Theory is Shaping Policy</i> . National Bureau of Economic Research, Inc, NBER Working Papers: 12476. Theoretical advances in macroeconomics made in the last three decades have had a major influence on macroeconomic policy analysis. Moreover, over the last several decades, the United States and other countries have undertaken a variety of policy changes that are precisely what macroeconomic theory of the last 30 years suggests. The three key developments that have shaped macroeconomic policy analysis are the Lucas critique of policy evaluation due to Robert Lucas, the time inconsistency critique of discretionary policy due to Finn Kydland and Edward Prescott, and the development of quantitative dynamic stochastic general equilibrium models following Finn Kydland and Edward Prescott.
2006	H68	Altshuler, Rosanne, Nicholas Bull, John Diamond, Timothy Dowd, and Pamela Moomau. 2006. <i>The Role of Dynamic Scoring in the Federal Budget Process: Closing the Gap Between Theory and Practice</i> . Rutgers University, Department of Economics, Departmental Working Papers. This paper discusses several issues that arise in the process of analyzing the macroeconomic effects of tax policy proposals in a way that is of practical use to legislators. In the current federal legislative process, much of the economic analysis of tax legislation boils down to a single set of numbers: an estimate of the effects of the proposal on projected federal revenues over the ten-year period following the current fiscal year. We discuss some of the practical aspects of developing a methodology for "dynamic scoring," or accounting for potential macroeconomic effects in the estimate of the revenue effects of a specific tax proposal. While there are many areas of theoretical debate and uncertainty in modeling the macroeconomic effects of tax policy, we discuss three often-overlooked practical issues in incorporating those effects in a revenue estimate: (1) translation of the tax proposal into inputs to a macroeconomic model that capture all the features of the proposal that are likely to have an impact on the economy; (2) adjustment of the tax and revenue related equations in the macroeconomic model to account for the difference between the actual present-law Internal Revenue Code and the specifics of the tax proposal being analyzed; and (3) reconciliation of differences in definitions of income between National Income and Product Account ("NIPA") data that macroeconomic models are typically calibrated to replicate, and the cash-basis income flows on which the present-law tax code is based. We show how the effects of proposed tax changes on GDP and revenues can vary depending on the methodologies chosen to address each of these issues.
2006	H80	Doepke, Matthias, and Dirk Krueger. 2006. <i>Origins and Consequences of Child Labor Restrictions: A Macroeconomic Perspective</i> . National Bureau of Economic Research, Inc, NBER Working Papers: 12665. In this paper we investigate the positive and normative consequences of child-labor restrictions for economic aggregates and welfare. We argue that even though the laissez-faire equilibrium may be inefficient, there are usually better policies to cure these inefficiencies than the imposition of a child-labor ban. Given this finding, we investigate the potential political-economic reasons behind the emergence and persistence of child-labor legislation. Our investigation is based on a structural dynamic general equilibrium model that provides a coherent and uniform framework for our analysis.
2006	H80	Wolff, Guntram B. 2006. <i>Foreign direct investment in the enlarged EU: do taxes matter and to what extent?</i> . Deutsche Bundesbank, Research Centre, Discussion Paper Series 1: Economic Studies: 2006,13. Foreign direct investment is of increasing importance in the European Union. This paper estimates the effect of taxes on foreign direct investment (FDI) flows and on three sub-components of these flows for the countries of the enlarged European Union. The model in the spirit of gravity equations robustly explains FDI flows between the 25 member states. Sample selection needs to be addressed in the estimation. We show that the different subcomponents of FDI should and indeed do react differently to taxes. After controlling for unobserved country characteristics and common time effects, the top statutory corporate tax rate of both, source and host country, turn insignificant for total FDI and investment into equity. However, high source country taxes clearly increase the probability of firms to re-invest profits abroad and lower the percentage of debt financed FDI. This might reflect profit re-allocation to avoid taxes. Market size factors have the expected signs for total FDI. Non-productivity adjusted wages as determinants of FDI are less robust.
2006	J11	THE SAME AS E27 Courmede, Boris, and Frederic Gonand. 2006. <i>Restoring Fiscal Sustainability in the Euro Area: Raise Taxes or Curb Spending?</i> . OECD Economics Department, OECD Economics Department Working Papers: 520.
2007		
2007	C14 C15 C65	Bolder, David Jamieson, and Tiago Rubim. 2007. <i>Optimization in a Simulation Setting: Use of Function Approximation in Debt Strategy Analysis</i> . Bank of Canada, Working Papers. The stochastic simulation model suggested by Bolder (2003) for the analysis of the federal government's debt-management strategy provides a wide variety of useful information. It does not, however, assist in determining an optimal debt-management strategy for the government in its current form. Including optimization in the debt-strategy model would be useful, since it could substantially broaden the range of policy questions that can be addressed. Finding such an optimal strategy is nonetheless complicated by two challenges. First, performing optimization with traditional techniques in a simulation setting is computationally intractable. Second, it is necessary to define precisely what one means by an "optimal" debt strategy. The authors detail a possible approach for addressing these two challenges. They address the first challenge by approximating the numerically computed objective function using a function-approximation technique. They consider the use of ordinary least squares, kernel regression, multivariate adaptive regression splines, and projection-pursuit regressions as approximation algorithms. The second challenge is addressed by proposing a wide range of possible government objective functions and examining them in the context of an illustrative example. The authors' view is that the approach permits debt and

Year	DE	Title and Abstract
		fiscal managers to address a number of policy questions that could not be fully addressed with the current stochastic simulation engine.
2007	C22	Jacquier, Antoine, and Saad Slaoui. 2007. <i>Variance Dispersion and Correlation Swaps</i> . Birkbeck, School of Economics, Mathematics & Statistics, Birkbeck Working Papers in Economics and Finance: 0712. In the recent years, banks have sold structured products such as Worst-of options, Everest and Himalayas, resulting in a short correlation exposure. They have hence become interested in offsetting part of this exposure, namely buying back correlation. Two ways have been proposed for such a strategy : either pure correlation swaps or dispersion trades, taking position in an index option and the opposite position in the components options. These dispersion trades have been traded using calls, puts, straddles, and they now trade variance swaps as well as third generation volatility products, namely gamma swaps and barrier variance swaps. When considering a dispersion trade via variance swaps, one immediately sees that it gives a correlation exposure. But it has empirically been showed that the implied correlation - in such a dispersion trade - was not equal to the strike of a correlation swap with the same maturity. Indeed, the implied correlation tends to be around 10 points higher. The purpose of this paper is to theoretically explain such a spread. In fact, we prove that the P&L of a dispersion trade is equal to the sum of the spread between implied and realised correlation - multiplied by an average variance of the components - and a volatility part. Furthermore, this volatility part is of second order, and, more precisely, is of Volga order. Thus the observed correlation spread can be totally explained by the Volga of the dispersion trade. This result is to be reviewed when considering different weighting schemes for the dispersion trade.
2007	C22	Aksoy, Yunus, and Miguel A. Leon-Ledesma. 2007. <i>Non-linearities and Unit Roots in G7 Macroeconomic Variables</i> . Birkbeck School of Economics, Mathematics & Statistics, Birkbeck Working Papers in Economics and Finance: 0710. We carry out a meta-analysis on the frequency of unit-roots in macroeconomic time series with a dataset covering 249 variables for the G7 countries. We use linear tests and the three popular non-linear tests (TAR, ESTAR and Markov Switching). In general, the evidence in favour of the random walk hypothesis is weaker than in previous studies. This evidence against unit roots is stronger for real and nominal asset prices. Our results show that rejection of the null of a unit root in the macro dataset is substantially higher for non-linear than linear models. Finally, the results from a Monte Carlo experiment show that rejection frequencies are very close to the nominal size of the test when the DGP is a linear unit root process. This leads us to reject the hypothesis that overfitting deterministic components explains the higher rejection frequencies of nonlinear tests.

2007	F53	Marangos, John. 2007. "Was Shock Therapy Consistent with the Washington Consensus?" <i>Comparative Economic Studies</i> , 49(1): 32-58. Williamson proposed the term 'Washington Consensus' to refer to the lowest common denominator of policy advice being addressed by the Washington based institutions. Owing to the considerable confusion about the term, I distinguish between two different versions of the term: the Washington Consensus proper to denote the original set of policies initiated by the father of the term and the Washington Consensus as a neoliberal manifesto to represent the policies identified with the term 'neoliberalism'. It is demonstrated that the Shock Therapy process had some common elements with both versions of the Washington Consensus; however, there were also important differences due in large measure to the differing circumstances in transition economies and Latin American economies.
2007	F53	Williamson, John. 2007. "Shock Therapy and the Washington Consensus: A Comment." <i>Comparative Economic Studies</i> , 49(1): 59-60. This short comment on the article by John Marangos welcomes the author's care in distinguishing alternative concepts of the Washington Consensus and distinguishing them in turn from the idea of shock therapy. It discusses several differences between what Marangos terms the "Washington Consensus Proper" and "Shock Therapy", such as the role of aid in financing budget deficits, voucher privatization, and price liberalization, and argues that these reflect differences in time and place rather than ideological disagreements.

2007	L24	Davidson, Paul. 2007. "Editor's Corner: Are We Making Progress toward a Civilized Society?" <i>Journal of Post Keynesian Economics</i> , 29(3): 521-28. This paper explains, in terms of Galbraith's "conventional wisdom" and "innocent fraud" of mainstream economics, why the U.S. economy has experienced significant backsliding from the degree of progress our economic policies and institutions made toward producing a civilized economic society. It then sets out policy proposals for making progress toward a twenty-first-century "good society."
2007	L53	Erlandsen, Espen, and Jens Lundsgaard. 2007. <i>How Regulatory Reforms in Sweden have boosted Productivity</i> . OECD Economics Department, OECD Economics Department Working Papers: 577. The economic crisis in the early 1990s prompted action on reforming the Swedish welfare state and its institutions, including deregulation of a wide range of product markets. In that way, Sweden took early action compared to other OECD countries currently struggling with how to make public finances more robust in an ageing context. The reforms that were implemented during the 1990s are now paying off in terms of productivity and GDP growth. Empirical evidence suggests that deregulation has delivered a considerable "productivity dividend". Although significant progress therefore has been made, renewed regulatory reform is needed to safeguard Sweden's ambitious public policy goals. Efforts should focus on improving enterprise formation and labour utilisation, as well as on providing better value for money in the public sector by raising its efficiency and delivering high quality services.
2007	N01	David, Paul A. 2007. "Path Dependence: A Foundational Concept for Historical Social Science." <i>Cliometrica</i> , 1(2): 91-114. This introduction to the concept of path dependence, its pertinence for the development of historical social science, and its application in economic analysis and economic history, proceeds from intuitive general ideas about history and historicity in narratives. It provides precise definitions of what is meant by describing a dynamical process as being "historical." Deterministic and stochastic formalizations of such dynamical systems are distinguished. The characterization of stochastic path dependent processes as "non-ergodic" is explained in non-mathematical language by reference to concepts in probability theory, and a variety of representations of such processes in formal models is surveyed (including the Polya urn-process, certain kinds of Markov chain models, branching processes, and reversible spin systems) to show that while all display path dependence, their properties in other respects are quite different. The diverse set of structural, micro-level conditions that can give rise to path dependence is examined, and a further distinction is drawn between the property of path dependence and the existence of so-called "QWERTY-effects"--characterized

Year	DE	Title and Abstract
		by decentralized competitive market failures and consequent "lock-in" to Pareto-inefficient equilibria. Concluding sections consider the implications of the existence of non-ergodic dynamics for the methods of economic policy analysis, and the nature of the guidance that can be obtained in regard to public policy affecting endogenous technological change and institutional evolution.
2007	O43	Fitoussi, Jean-Paul. 2007. "Le role des institutions et des normes sociales dans la determination des politiques economiques. (Macroeconomic Policies and Institutions. With English summary.)." <i>Revue de L'OFCE</i>, 0(102): 109-24. The main purpose of this paper is to understand the course of macroeconomic policy in Europe in the light of several theories which have shown that it was barely adapted to the different shocks that have hinted the European economy in the last two decades. As a result, the performance of the EU economy in general and the Euro area economy in particular have been poor. The mainstream diagnosis of this situation is the structural "sickness" of the European economy, and more specifically of its "big" continental countries. This diagnosis certainly contains bits of truth, and even if it contains also a lot of rhetoric, it has become a common belief. Common beliefs, whatever their theoretical and empirical underpinning, act as social norms. I thus put forward the working hypothesis that a change in social norms may explain the course of macroeconomic policies in Europe--their non reactivity to unemployment and/or soft growth--if we admit that their implicit aim is to show that the only way out are structural reforms to adapt to the new social norm.
2007	O51	Shelburne, Robert. 2007. <i>The Economic Situation and Outlook in Mid-2007 for the ECE Economies--Europe, North America, and the CIS</i>. UNECE, ECE Discussion Papers Series: 2007_3. 2007	Q41	Snowden, Brian. 2007. "The New Classical Counter-Revolution: False Path or Illuminating Complement?" <i>Eastern Economic Journal</i>, 33(4): 541-62. In this paper the author responds to Laurence Seidman's recent article, 'The New Classical Counter-Revolution: A False Path for Macroeconomics'. The author challenges the view that new classical macroeconomics has been a false path and provides a critique of Seidman's arguments with respect to his interpretation of the 1970s 'stagflation', the relevance of new classical macroeconomics for practical policymaking, the contribution of real business cycle theory, and the new classical content of contemporary macroeconomic textbooks. The author concludes that the new classical counter-revolution has had an extremely productive influence on the current mainstream new neoclassical synthesis framework.
2007	Q41	Seidman, Laurence S. 2007. "The New Classical Counter-Revolution: False Path or Illuminating Complement? Reply." <i>Eastern Economic Journal</i>, 33(4): 563-65. The picture of economic well-being depends crucially on how it is measured. We introduce a new measure of economic well-being that includes public consumption, income from wealth, and household production. The differences in scope and method between our measure and standard income lead to substantially different findings regarding economic well-being. The average U.S. household appears to be much better off in 2001 relative to 1989 according to our measure in comparison to money income. In contrast to official measures, our measure shows that racial disparity increased. The increase in measured inequality was higher than indicated by the official measures.
2007	R10	Coutts, Ken, Andrew Glyn, and Bob Rowthorn. 2007. <i>Structural Change under New Labour</i>. Faculty of Economics (formerly DAE), University of Cambridge, Cambridge Working Papers in Economics. The paper examines specific features of structural change in the UK since 1997, contrasting the decline in industrial jobs with the rise in a variety of service jobs. It examines the proximate causes of structural change, in particular whether the chronically slow growth of manufacturing output in the 1980s has persisted. The implications of this structural change are considered, particularly the effects on the balance of payments and regional employment patterns. The paper suggests that the main impact of government policies on regional employment may have been through the direct and multiplier effects of public expenditure.

2008	A14	Rao, V. K. R. V. 2008. "The Problem of Relevance in Social Science Research: An Introductory Exposition." <i>Indian Economic Journal</i>, 56(2): 110-17. This paper was originally presented as an inaugural address delivered by Dr. V. K. R. V. Rao, at a Seminar, organised by the Institute of Economic Growth, New Delhi, in April 1980, on the theme entitled, "Relevance in Social Science Research". The basic objective of the said Seminar was to undertake some sort of self appraisal, by the researchers in social sciences in regard to the "social relevance" of their research. The themes covered in the Seminar included not only the general issues of conceptual and practical nature, but also specific issues covering the sectors, such as, agriculture, population, trade, and industry. In this paper, Dr. Rao has dealt with many analytical and practical questions, such as, the meaning of relevance, the factors causing lack of relevance, usefulness in policy making and further areas of research in specific fields. It is our view that the "problem of relevance" is still a vexed question in the social science research in the contemporary period, as well and we hope that this perceptive paper of Dr. V. K. R. V. Rao would generate fresh debate on the subject and thereby help the cause of making social science research, hitherto "more relevant".
2008	C23 Q31	Manera, Matteo, Cristina Cattaneo, and Elisa Scarpa. 2008. <i>Industrial Coal Demand in China: A Provincial Analysis</i>. Fondazione Eni Enrico Mattei, Working Papers: 2008.8. In recent years, concerns regarding the environmental implications of the rising coal demand have induced considerable efforts to generate long-term forecasts of China's energy requirements. Nevertheless, none of the previous empirical studies on energy demand for China has tackled the issue of modelling coal demand in China at provincial level. The aim of this paper is to fill this gap. In particular, we model and forecast the Chinese demand for coal using time series data disaggregated by provinces. Moreover, not only does our analysis account for heterogeneity among provinces, but also, given the nature of the data, it captures the presence of spatial autocorrelation among provinces using a spatial econometric model. A fixed effects spatial lag model and a fixed effects spatial error model are estimated to describe and forecast industrial coal demand. Our empirical results show that the fixed effect spatial lag model better captures the existing interdependence between provinces. This model forecasts an average annual increase in coal demand to 2010 of 4 percent.
2008	C43	Squalli, Jay, Kenneth Wilson, and Sarah Hugo. 2008. "An Analysis of Growth Competitiveness." <i>International Review of Applied Economics</i>, 22(1): 105-26. The publication of the Global Competitiveness Report 2005-2006 by the World Economic Forum (WEF) (2005) has focused attention once more upon the relative abilities of many countries to compete in world markets. This article provides an analysis and evaluation of the approach taken by the WEF in constructing its measure of international growth competitiveness, the Growth Competitiveness Index (GCI) which is used to rank countries. In particular, the study identifies three areas where the GCI is vulnerable to criticism. First, the treatment of outliers for hard data items is ambiguous and we identify alternative methods for dealing with outliers that are justifiable or even superior. Second, the crucial role of the variable utility patents in the calculation of the GCI is questioned and serious doubts concerning the use of this variable are raised. Third, the

Year	DE	Title and Abstract
		article suggests an alternative approach, based upon structural equation modeling, which should be used for the determination of weights in the index calculation process, rather than the arbitrary method adopted by the WEF.
2008	C63	LeBaron, Blake, and Peter Winker. 2008. "Introduction to the Special Issue on Agent-Based Models for Economic Policy Advice." <i>Jahrbucher fur Nationalokonomie und Statistik</i>, 228(2-3): 141-48. This special issue of the Journal of Economics and Statistics is devoted to the use of agent-based models for economic policy advice. It presents a collection of research papers in different fields of applications. Special emphasis is laid on discussing the potential and possible limitations of agent-based models for economic policy advice. The editorial provides an overview on the role of agent-based modeling in economic policy referring also to the papers presented. Furthermore, it highlights the strength of the approach, i.e., the explicit microfoundation and the modeling of heterogenous agents. Finally, we also report on current limitations of the method with regard to economic policy advice and point at some areas deserving further research.
2008	F11	Cunat, Alejandro, Szabolcs Deak, and Marco Maffezzoli. 2008. <i>Tax Cuts in Open Economies</i>. Centre for Economic Performance, LSE, CEP Discussion Papers. A reduction in income tax rates generates substantial dynamic responses within the framework of the standard neoclassical growth model. The short-run revenue loss after an income tax cut is partly--or, depending on parameter values, even completely--offset by growth in the long-run, due to the resulting incentives to further accumulate capital. We study how the dynamic response of government revenue to a tax cut changes if we allow a Ramsey economy to engage in international trade: the open economy's ability to reallocate resources between labor-intensive and capital-intensive industries reduces the negative effect of factor accumulation on factor returns, thus encouraging the economy to accumulate more than it would do under autarky. We explore the quantitative implications of this intuition for the US in terms of two issues recently treated in the literature: dynamic scoring and the Laffer curve. Our results demonstrate the international trade enhances the response of government revenue to tax cuts by a relevant amount. In our benchmark calibration, a reduction in the capital-income tax rate has virtually no effect on government revenue in steady state.

2008	G01	Plakalovic, Novo. 2008. "Macroeconomic Policies, IMF Assistance and Potentials of the Financial Crisis in BiH. (In Serbian With English summary.)." <i>Zbornik Radova Ekonomskog Fakulteta u Istocnom Sarajevu</i>, 2(0): 83-106. The paper treats the issues of firm and flexible economic policies based in emerging markets by which the prevention and resolution of financial crises would be done. If problems arise in the financial sector then there appears the question of adequacy of the economic policy, adjustment programmes definition, and economic policy redefinition. The countries resolve the problems caused by the irreversible capital flows on the basis of adjustment programmes in whose creation IMF actively takes part and assists. At the same time, these programmes are financially supported and most often conditioned. The paper considers the character and efficiency of the adjustment programmes and it deals generally with the effects that IMF assistance exerts on the member countries and with alternative behavior of the Fund member countries being in position to access the adjustment programmes. Special attention is paid to the macroeconomic situation in BiH from the point of view of potentials for possible rise of financial crises. In wider terms, the paper analyzes in more details the state and behavior within the framework of the banking system as dominant in the total financial area in BiH. The credit activity, balance proportions in the banking sector, and money and capital flows within the banks and abroad, credit policies, and other issues indicate the critical points and processes that might have unfavorable impact on the stability of banking and consequently on the whole financial system in BiH.
2008	L13	Julien, Ludovic. 2008. "Market Power, the Multiplier and Economic Policy under Oligopolistic Competition." <i>Economics Bulletin</i>, 4(29): 1-8. In this note, we consider a multisector macroeconomic model under oligopolistic competition. We analyze the effect of an increase of the number of sectors on equilibrium price and on allocations, when the number of oligopolists of each type is constant. We also show that a tax policy has more impact on aggregate activity when the economy has many sectors. Additionally, the tax multiplier is higher than the expenditure multiplier.

2008	O42	Blackburn, Keith, Kyriakos C. Neanidis, and M. Emranul Haque. 2008. <i>Corruption, Seigniorage and Growth: Theory and Evidence</i>. CESifo GmbH, CESifo Working Paper Series: CESifo Working Paper No. 2354. This paper presents an analysis of the effect of bureaucratic corruption on economic growth through a public finance transmission channel. At the theoretical level, we develop a simple dynamic general equilibrium model in which financial intermediaries make portfolio decisions on behalf of agents, and bureaucrats collect tax revenues on behalf of the government. Corruption takes the form of the embezzlement of public funds, the effect of which is to increase the government's reliance on seigniorage finance. This leads to an increase in inflation which, in turn, reduces capital accumulation and growth. At the empirical level, we use data on 82 countries over a 20-year period to test the predictions of our model. Taking proper account of the government's budget constraint, we find strong evidence to support these predictions under different estimation strategies. Our results are robust to a wide range of sensitivity tests.
2008	O54 Q48	Weisbrot, Mark, and Rebecca Ray. 2008. <i>Oil Prices and Venezuela's Economy</i>. Center for Economic and Policy Research (CEPR), CEPR Reports and Issue Briefs. This paper looks at Venezuela's export revenue, imports, and trade and current account balances under a range of oil price outcomes for the next two years. It finds that Venezuela would run large current account surpluses for prices between \$60-90 per barrel, and would even run a small surplus with prices at \$50 per barrel. (Most oil industry estimates for the next two years are in the range of \$80-90 per barrel). The authors conclude that Venezuela is unlikely to run into

Year	DE	Title and Abstract
		foreign exchange constraints in the foreseeable future, and can pursue expansionary fiscal policies to counter any economic downturn.
2008	P13	Chaves, Rafael. 2008. "Public Policies and Social Economy in Spain and Europe." <i>CIRIEC-Espana, Revista de Economia Publica, Social y Cooperativa</i> , 0(62): 35-60. The article considers different economic policies likely to affect the social economy sector as an institutional sector. In a first time, it sets up an analytical framework which allows to apprehend the policies contents and offers three typologies. In the light of this framework, it first makes a global evaluation of policies implemented in Europe and then focuses on Spain, one of the Union countries with the highest level of development of these policies. Finally, the author evaluates the efficiency of the main measures of economic policy applied in this country.

2008	Q33	van der Ploeg, Frederick, and Anthony J. Venables. 2008. <i>Harnessing Windfall Revenues in Developing Economies: Sovereign Wealth Funds and Optimal Tradeoffs Between Citizen Dividends, Public Infrastructure and Debt Reduction</i> . C.E.P.R. Discussion Papers, CEPR Discussion Papers: 6954. A windfall of foreign aid or natural resource revenue faces government with choices of how to manage public borrowing, public asset accumulation, and the distribution of funds to households (across time and household types), particularly when the windfall is both anticipated and temporary. These choices are acute if some households do not have access to credit markets and are unable to smooth consumption, and if the country as a whole is not a price-taker in international capital markets--both reasonable descriptions of many developing countries experiencing resource (or aid) booms. We analyse the optimal policy actions for countries in this position and show that the usual permanent income hypothesis prescription of engineering a permanent increase in consumption financed by borrowing ahead of the windfall and then accumulating a Sovereign Wealth Fund (SWF) is not optimal. Heavily indebted countries with a small windfall should both increase current consumption and accumulate capital to accelerate their development. Only if the windfall is large relative to initial debt is it optimal to build a SWF. We study the intricate dynamic trade-offs faced when using the windfall to pay off debt and possibly accumulate a SWF, build public infrastructure and hand out citizen dividends. Finally, we show that a more sophisticated range of instruments (e.g., an asset holding subsidy) makes the trade-offs easier.

2008	Q50	Michl, Thomas R. 2008. <i>Discounting Nordhaus</i> . Political Economy Research Institute, University of Massachusetts at Amherst, Working Papers. This paper evaluates Nordhaus's neoclassical complaints about the Stern Review from the vantage point of classical growth theory. Nordhaus argues that the Stern Review exaggerates the effects of global warming because it uses a discount rate that is well below the market rate of return on capital. From the perspective of classical growth theory, Nordhaus's belief in choosing preference parameters for the social planner based on observed market rates of return filtered through the Ramsey equation is equivalent to assigning the preferences of the capitalist agents to the social planner. This equivalence is an implication of the Cambridge Theorem, which interprets the Ramsey equation as the saving function of the capitalist agents. The classical theory of growth interprets the market return to capital as a reflection of the property relations of capitalist society that does not offer the social planner any information that would be useful in resolving the problem of global warming. Contrary to the viewpoint of neoclassical economic theory, the market return to capital offers no information about preferences for the social welfare function or about the putative "marginal product" of conventional capital.
2008	Q51 Q58	Summers, Lawrence, and Richard Zeckhauser. 2008. "Policymaking for Posterity." <i>Journal of Risk and Uncertainty</i> , 37(2-3): 115-40. Policymaking for posterity involves current decisions with distant consequences. Contrary to conventional prescriptions, we conclude that the greater wealth of future generations may strengthen the case for preserving environmental amenities; lower discount rates should be applied to the far future, and special effort should be made to avoid actions that impose costs on future generations. Posterity brings great uncertainties. Even massive losses, such as human extinction, however, do not merit infinite negative utility. Given learning, greater uncertainties about damages could increase or decrease the optimal level of current mitigation activities. Policies for posterity should anticipate effects on: alternative investments, both public and private; the actions of other nations; and the behaviors of future generations. Such effects may surprise. This analysis blends traditional public finance and behavioral economics with a number of hypothetical choice problems.
2009		
2009	C11	Bayar, Ali, and Bram Smeets. 2009. <i>Economic and Political Determinants of Budget Deficits in the European Union: A Dynamic Random Coefficient Approach</i> . CESifo GmbH, CESifo Working Paper Series: CESifo Working Paper No. 2546. This paper formulates a dynamic Random Coefficient Model (RCM) to consider a set of popular determinants of public deficits in the EU-15 over the period 1971-2006, both at a country-specific level and from a population-wide perspective. Although the extent of government deficits and debt has been one of the most debated macroeconomic issues in recent times, the models trying to capture the explanatory powers driving these deficits typically estimate models that pose the strict assumption of homogeneity on the coefficients over all countries in the model. The sensibility of this assumption will be investigated, with results showing that an increase in the degree of heterogeneity leads to an improvement in the model fit and provides additional information to nuance the effects of the explanatory variables. In this way, the paper exposes a limited degree of partisanship over all countries under consideration, but on the other hand provides evidence for opportunistic behaviour of policymakers in the major part of the sample. The effect of institutional changes following the enforcement of the Maastricht Treaty varies over the countries and is related to the necessity of budgetary consolidation.
2009	E47 R15 R21 R28	Khandani, Amir E., Andrew W. Lo, and Robert C. Merton. 2009. <i>Systemic Risk and the Refinancing Ratchet Effect</i> . Harvard Business School, Harvard Business School Working Papers: 10-023. The confluence of three trends in the U.S. residential housing market--rising home prices, declining interest rates, and near-frictionless refinancing opportunities--led to vastly increased systemic risk in the financial system. Individually, each of these trends is benign, but when they occur simultaneously, as they did over the past decade, they impose an unintentional synchronization of homeowner leverage. This synchronization, coupled with the indivisibility of residential real estate that prevents homeowners from deleveraging when property values decline and homeowner

Year	DE	Title and Abstract
		equity deteriorates, conspire to create a "ratchet" effect in which homeowner leverage is maintained or increased during good times without the ability to decrease leverage during bad times. If refinancing-facilitated homeowner-equity extraction is sufficiently widespread-as it was during the years leading up to the peak of the U.S. residential real-estate market-the inadvertent coordination of leverage during a market rise implies higher correlation of defaults during a market drop. To measure the systemic impact of this ratchet effect, we simulate the U.S. housing market with and without equity extractions, and estimate the losses absorbed by mortgage lenders by valuing the embedded put-option in non-recourse mortgages. Our simulations generate loss estimates of \$1.5 trillion from June 2006 to December 2008 under historical market conditions, compared to simulated losses of \$280 billion in the absence of equity extractions.
2009	E64 I10	Baker, Dean. 2009. <i>Job Sharing: Tax Credits to Prevent Layoffs and Stimulate Employment</i> . Center for Economic and Policy Research (CEPR), CEPR Reports and Issue Briefs. The unemployment rate is expected to average 10.2 percent for 2010, 9.1 percent for 2011, and 7.3 percent for 2012. With this in mind, this Issue Brief describes a job sharing tax credit, designed to provide a quick and substantial boost to the economy. It would use tax dollars to pay firms to shorten the typical workweek, while keeping pay constant. This should cause employers to want to hire additional workers. A rough estimate of the impact of this tax credit is between 1.3 and 2.7 million jobs created.
2009	E64 I10	Sherman, Matt. 2009. <i>More Budget Belt-Tightening Means More Job Losses for States</i> . Center for Economic and Policy Research (CEPR), CEPR Reports and Issue Briefs. This paper looks at the problem of state budget shortfalls during the recession and calculates the number of jobs that would be lost (nationally and by state) if states utilize pro-cyclical spending cuts in an attempt to balance their budgets. This is an update to an earlier paper from December 2008, "Will Workers Survive State Budget Belt-Tightening?"
2009	E64 I10	Sherman, Matt, and Nathan Lane. 2009. <i>Cut Loose: State and Local Layoffs of Public Employees in the Current Recession</i> . Center for Economic and Policy Research (CEPR), CEPR Reports and Issue Briefs. In the current recession, millions of Americans have lost their jobs. Unemployment has increased nationwide to levels not witnessed since the 1980s. This issue brief tallies more than 110,000 jobs that have been shed from state and local governments in the last two years and breaks them down by state (and metropolitan area where available). Without the stimulus passed in February of this year, there would have been many more layoffs at the the state and local level.
2009	E64 I10	Baker, Dean, and Rivka Deutsch. 2009. <i>The State and Local Drag on the Stimulus</i> . Center for Economic and Policy Research (CEPR), CEPR Reports and Issue Briefs. This report shows that the \$787 billion included in the 2009 ARRA will not have as much of an immediate effect on the economy as initially anticipated. After subtracting the annual AMT patch and accounting for state level spending and tax cuts, the full effect of federal stimulus will equal a little more than 1 percent of GDP a year, falling far short of what is needed to re-ignite the economy. While the 2009 recovery act was a vital first step towards restoring the nations economic foundation, this paper puts some perspective on the immediate effects of the stimulus.
2009	E64 I10	Baker, Dean. 2009. <i>Pay for Play? Tax Credits for Paid Time Off</i> . Center for Economic and Policy Research (CEPR), CEPR Reports and Issue Briefs. Economists are increasingly coming to the recognition that the current downturn is likely to be longer and more severe than they had expected at the time the last stimulus package was approved in February. As a result, there is likely to be interest in additional stimulus in order to boost the economy and lower the unemployment rate. This paper briefly outlines a method for Congress to quickly boost demand in the economy, while at the same time promoting important public ends: an employer tax credit for paid time off. This paid time off can take the form of paid family leave, paid sick days, paid vacation, or a shorter workweek. This tax credit can both provide short-term stimulus and also provide an incentive to restructure workplaces in ways that are more family friendly. It is possible that many workplaces may leave in place changes made to take advantage of this tax credit even after it has expired.
2009	E64 J80 J88	Schmitt, John. 2009. <i>Inequality as Policy: The United States Since 1979</i> . Center for Economic and Policy Research (CEPR), CEPR Reports and Issue Briefs. Since the end of the 1970s, the United States has seen a dramatic increase in economic inequality. While the United States has long been among the most unequal of the world's rich economies, the economic and social upheaval that began in the 1970s was a striking departure from the movement toward greater equality that began in the Great Depression, continued through World War II, and was a central feature of the first 30 years of the postwar period. This is not due to chance circumstances but is the direct result of a set of policies designed first and foremost to increase inequality.
2009	E64 I10 I11	Baker, Dean, and David Rosnick. 2009. <i>Taming the Deficit: Saving Our Children from Themselves</i> . Center for Economic and Policy Research (CEPR), CEPR Reports and Issue Briefs. Many proponents of conservative fiscal policies talk of the budget deficit as being a matter of intergenerational equality. However, this paper shows the younger generations (and those yet to be born) will contribute more to the deficit than older generations. This analysis uses data from the CBO Long-Term Budget Outlook and the authors' calculations to show that the driving force behind the deficit is our broken health care system and that this should be the focus of the debate.
2009	E64	Baker, Dean, and John Schmitt. 2009. <i>The \$1 Trillion Wage Deficit</i> . Center for Economic and Policy Research (CEPR), CEPR Reports and Issue Briefs. The strong rise in the U.S. stock market since the spring and the return to positive economic growth in the third quarter of this year have created a consensus among economists that the Great Recession is very likely over. Unfortunately, the end of the official recession will have little visible impact on U.S. labor markets until almost 2012. Within that time, this paper estimates that U.S. workers will have lost over \$1 trillion in wages and salaries, \$150 billion more than the 10-year costs of proposed health care reform legislation.
2009	F24	Hujo, Katja, and Shea McClanahan, eds. 2009. <i>Financing Social Policy: Mobilizing Resources for Social Development</i> , New York: St. Martin's Press, Palgrave Macmillan. Thirteen papers, originally presented and discussed at a workshop organized by United Nations Research Institute for Social Development in Geneva in March 2007, examine the challenges and constraints associated with specific revenue sources for social policy, including taxation, social insurance, pension funds, mineral rents, remittances, and aid. Papers discuss social exclusion policies and labor markets in Latin America (Ruben M. Lo Vuolo); financing for development--international redistribution (Isabel Ortiz); how financing of social services can be pro-poor (Enrique Delamonica and Santosh Mehrotra); financing developmental social policies in low-income countries--conditions and constraints (Alice Sindzingre); aid and the financing of public social sector spending (Oliver Morrissey); natural resource wealth, development, and social policy--evidence and issues (Andrew Rosser); mineral rents and social policy--the case of the Norwegian government oil fund (Erling Holmoy); social insurance (pensions and health), labor markets, and coverage in Latin America (Carmelo Mesa-Lago); pensions and pension funds in the making of a nation-state and a national economy--the case of Finland (Olli E. Kangas); provident and pension funds and economic development in selected Asian countries (Mukul G. Asher); remittances and social development (Hein de Haas); and remittances and social development--the Latin American experience (Manuel Orozco).

2009	F37	Cordero, Jose Antonio. 2009. <i>The IMF's Stand-by Arrangements and the Economic Downturn in Eastern Europe: The Cases of Hungary, Latvia, and Ukraine</i>. Center for Economic and Policy Research (CEPR), CEPR Reports and Issue Briefs. This paper looks at three countries that have been hard-hit by the world economic recession, and have turned to the IMF for assistance: Hungary, Latvia, and Ukraine. In all of these countries, it would appear that there were more sensible responses to the crisis that would reduce the loss of employment and output, cuts in social services, and political instability that have resulted from the downturn. Instead, the governments' responses to the downturn as well as IMF conditions for assistance have caused additional harm.
2009	G33	Mian, Atif R., and Amir Sufi. 2009. <i>House Prices, Home Equity-Based Borrowing, and the U.S. Household Leverage Crisis</i>. National Bureau of Economic Research, Inc, NBER Working Papers: 15283. Using individual-level data on homeowner debt and defaults from 1997 to 2008, we show that borrowing against the increase in home equity by existing homeowners is responsible for a significant fraction of both the sharp rise in U.S. household leverage from 2002 to 2006 and the increase in defaults from 2006 to 2008. Employing land topology-based housing supply elasticity as an instrument for house price growth, we estimate that the average homeowner extracts 25 to 30 cents for every dollar increase in home equity. Money extracted from increased home equity is not used to purchase new real estate or pay down high credit card balances, which suggests that borrowed funds may be used for real outlays (i.e., consumption or home improvement). Home equity-based borrowing is stronger for younger households, households with low credit scores, and households with high initial credit card utilization rates. Homeowners in high house price appreciation areas experience a relative decline in default rates from 2002 to 2006 as they borrow heavily against their home equity, but experience very high default rates from 2006 to 2008. Our estimates suggest that home equity-based borrowing is equal to 2.8% of GDP every year from 2002 to 2006, and accounts for at least 34% of new defaults from 2006 to 2008.
2009	H54	Leeper, Eric M., Todd B. Walker, and Shu-Chun Susan Yang. 2009. <i>Government Investment and Fiscal Stimulus in the Short and Long Runs</i>. National Bureau of Economic Research, Inc, NBER Working Papers: 15153. This paper contributes to the debate about fiscal multipliers by studying the impacts of government investment in conventional neoclassical growth models. The analysis focuses on two dimensions of fiscal policy that are critical for understanding the effects of government investment: implementation delays associated with building public capital projects and expected future fiscal adjustments to debt-financed spending. Implementation delays can produce small or even negative labor and output responses in the short run; anticipated fiscal financing adjustments matter both quantitatively and qualitatively for long-run growth effects. Taken together, these two dimensions have important implications for the short-run and long-run impacts of fiscal stimulus in the form of higher government infrastructure investment. The analysis is conducted in several models with features relevant for studying government spending, including utility-yielding government consumption, time-to-build for private investment, and government production.
2009	H54	Organisation for Economic Co-operation and Development. 2009. <i>Economic Policy Reforms: Going for Growth: 2009, Paris and Washington, D.C.: Organisation for Economic Co-operation and Development</i>. Takes stock of the recent progress made in implementing policy reforms to improve labor productivity in OECD countries. Discusses structural reform at a time of financial crisis; structural policy priorities 2009--an overview; country notes; structural policy indicators; taxation and economic growth; infrastructure investment--links to growth and the role of public policy; reform of product market regulation in OECD countries--1998-2008; and population structure, employment, and productivity. Available in French under the title Reformes economiques: Objectif croissance--2009.
2009	I10	Nardi, Mariacristina De, Eric French, and John Bailey Jones. 2009. <i>Life Expectancy and Old Age Savings</i>. National Bureau of Economic Research, Inc, NBER Working Papers: 14653. Rich people, women, and healthy people live longer. We document that this heterogeneity in life expectancy is large, and we use an estimated structural model to assess its effect on the elderly's saving. We find that the differences in life expectancy related to observable factors such as income, gender, and health have large effects on savings, and that these factors contribute by similar amounts. We also show that the risk of outliving one's expected lifespan has a large effect on the elderly's saving behavior.

2009	R20 R21	Baker, Dean. 2009. <i>The Housing Crash Recession and the Case for a Third Stimulus</i>. Center for Economic and Policy Research (CEPR), CEPR Reports and Issue Briefs. This paper makes the case for a third stimulus package to in the face of economic indicators signaling that the economy is in a deeper downturn than was expected based on previous projections. Specifically, the report calls for an employer tax-credit for extending health care coverage and another per worker employer tax credit for increasing paid time off from work. The author also makes the case for a housing policy centered on the stabilization of prices in non-bubble and deflated markets rather than applying the same efforts on markets that remain at bubble inflated levels. Finally, the paper argues that the dollar must be allowed to fall in order to adjust trade imbalances that are compounding the U.S. economic crisis caused by the collapse of the housing market.

2010	B15	Wray, L. Randall. 2010. "Money". Levy Economics Institute, The, Economics Working Paper Archive. This paper advances three fundamental propositions regarding money: (1) As R. W. Clower (1965) famously put it, money buys goods and goods buy money, but goods do not buy goods. (2) Money is always debt; it cannot be a commodity from the first proposition because, if it were, that would mean that a particular good is buying goods. (3) Default on debt is possible. These three propositions are used to build a theory of money that is linked to common themes in the heterodox literature on money. The approach taken here is integrated with Hyman Minsky's (1986) work (which relies heavily on the work of his dissertation adviser, Joseph Schumpeter [1934]); the endogenous money approach of Basil Moore; the French-Italian circuit approach; Paul Davidson's (1978) interpretation of John Maynard Keynes, which relies on uncertainty; Wynne Godley's approach, which relies on accounting identities; the "K" distribution theory of Keynes, Michal Kalecki, Nicholas Kaldor, and Kenneth Boulding; the sociological approach of Ingham; and the chartalist, or state money, approach (A. M. Innes, G. F. Knapp, and Charles Goodhart). Hence, this paper takes a somewhat different route to develop the more typical heterodox conclusions about money.
2010	C01	Ali Abbas, S. M., Jacques Bouhga-Hagbe, Antonio Fatas, Paolo Mauro, and Ricardo C. Velloso. 2010. <i>Fiscal Policy and the Current Account</i>. C.E.P.R. Discussion Papers, CEPR Discussion Papers: 7859. This paper examines the relationship between fiscal policy and the current account, drawing on a larger country sample than in previous studies and using panel regressions, vector auto-regressions, and an analysis of large fiscal and external adjustments. On average, a strengthening in the fiscal balance by 1 percentage point of GDP is associated with a current account improvement of 0.2-0.3 percentage point of GDP. This association is as strong in emerging and low-income countries as it is in advanced economies; and significantly higher when output is above potential.
2010	C90 D03	Riedl, Arno. 2010. "Behavioral and Experimental Economics Do Inform Public Policy." <i>FinanzArchiv</i>, 66(1): 65-95. Experimental and behavioral economics are well-established branches of economic science. This essay presents and discusses some results and behavioral regularities from these fields, which are of potential and actual importance for public policy. After a brief introduction to what experimental and behavioral economics are, some important behavioral regularities--presentation and framing effects, prosocial behavior, and reciprocity--are introduced, and it is reported how they interact with prominent trading institutions, taxation, and social and individual well-being. Throughout, some implications for public policy are discussed.

2010	E69	Nersisyan, Yeva, and L. Randall Wray. 2010. Does Excessive Sovereign Debt Really Hurt Growth? A Critique of This Time Is Different, by Reinhart and Rogoff. Levy Economics Institute, The Economics Working Paper Archive. The worst global downturn since the Great Depression has caused ballooning budget deficits in most nations, as tax revenues collapse and governments bail out financial institutions and attempt countercyclical fiscal policy. With notable exceptions, most economists accept the desirability of expansion of deficits over the short term but fear possible long-term effects. There are a number of theoretical arguments that lead to the conclusion that higher government debt ratios might depress growth. There are other arguments related to more immediate effects of debt on inflation and national solvency. Research conducted by Carmen Reinhart and Kenneth Rogoff is frequently cited to demonstrate the negative impacts of public debt on economic growth and financial stability. In this paper we critically examine their work. We distinguish between a nation that operates with its own floating exchange rate and nonconvertible (sovereign) currency, and a nation that does not. We argue that Reinhart and Rogoff's results are not relevant to the case of the United States.
2010	F50	Weisbrot, Mark, and Juan Antonio Montecino. 2010. Alternatives to Fiscal Austerity in Spain. Center for Economic and Policy Research (CEPR), CEPR Reports and Issue Briefs. 2010	H44 H83	Moulton, Stephanie, and Charles Wise. 2010. "Shifting Boundaries between the Public and Private Sectors: Implications from the Economic Crisis." <i>Public Administration Review</i>, 70(3): 349-60. What are the differences between the public and private sectors as well as their interrelationships in light of the recent financial crisis? Has the global economic crisis fundamentally shifted the boundaries between the two sectors? This essay examines the nature and extent of the shift. The authors present an analysis of the Troubled Asset Relief Program (TARP) to highlight the massive transformations that are taking place and to introduce lessons for future policy initiatives. Between financial rescue missions and the economic stimulus program, government spending accounts for a bigger share of the nation's economy--26 percent--than at any time since World War II. The government is financing 9 out of 10 new mortgages in the United States. If you buy a car from General Motors, you are buying from a company that is 60 percent owned by the government. If you take out a car loan or run up your credit card, the chances are good that the government is financing both your debt and that of your bank.
2010	H44 H83	Witesman, Eva M. 2010. "Order beyond Crisis: Organizing Considerations across the Public Service Configuration Life Cycle." <i>Public Administration Review</i>, 70(3): 361-66. This article responds to the preceding paper by Stephanie Moulton and Charles Wise, critiquing the dimensions that those authors use as organizing guides in the delivery of public services through public-private institutional configurations, including the evaluation of the Troubled Asset Relief Program (TARP). In this essay, Eva M. Witesman proposes a modification to the framework and provides suggestions for future research.
2010	H83	Boulat, Regis. 2010. "La via europea alla produttività: Jean Fourastie tra piano Monnet e piano Marshall (1945-1953). (The European Way to Productivity: Jean Fourastie between the Monnet Plan and the Marshall Plan [1945-1953]. With English summary)." <i>Imprese e Storia</i>, 0(39): 9-40. Now recognized as the primary source of growth and employment, the notion of productivity becomes an issue in French economic policy-making after World War II. When efforts are made to rebuild and modernize the French economy in order to catch up with America's high living standards, productivity is at the core of the strategies implemented by entrepreneurs and modernizers. Productivity is also used as an "ambiguous speech" by the so-called Bataillon sacre de la productivite, a group led by Jean Fourastie within the public administration structure in charge of economic planning: with the help of Fourastie's conceptual elaboration and thanks to the "psychological shock" of productivity missions, this small but influential group sought to convince the French of the need to import new working methods and to pacify social relations. Fourastie's interpretation of the notion of productivity also contributed to the harmonization, across Europe, of the tools for conceptualizing economic development.

2010	Q54	Stern, Nicholas. 2010. "Presidential Address: Imperfections in the Economics of Public Policy, Imperfections in Markets, and Climate Change." <i>Journal of the European Economic Association</i>, 8(2-3): 253-88. The economics of public policy has suffered from "collective amnesia": we have forgotten or ignored much of the tradition of public policy in imperfect economies whose

Year	DE	Title and Abstract
		foundations were laid by James Meade and Paul Samuelson. This has been associated with a period of around two decades from the early 1980s to the early 2000s where the economics of public policy has "bent to political winds" and has fed arguments for government to get out of the way and leave everything to the markets, to self-interest, and to self-regulation. This has manifested itself via the choice of models (those which imply, often directly from assumptions, passive government), patterns of teaching (the marginalisation of public economics in imperfect economics) and "compartmentalisation." Examples in climate change where this amnesia has misled include approaches to discounting and the failure to make non-marginal change central to analysis. On the other hand, creative application of modern public economics gives interesting results such as the possibility of making both current and future generations better off and of informed discussion complementing economic instruments. There are strong formal analogies between policy on climate change and on behavioural economics. Indeed, there seems to be great potential in the combination of these two fields.
2010	R38	Leeson, Robert, ed. 2010. <i>Canadian Policy Debates and Case Studies in Honour of David Laidler</i> , New York: St. Martin's Press, Palgrave Macmillan. Eight papers, with comments, written in honor of David Laidler and his contributins to Canadian public policy research, consider Canadian policy issues. Papers discuss the Canadian monetary order--past, present, and prospects (William Robson); Canadian monetary policy (Peter Howitt); the lender of last resort--lessons from Canadian history (Angela Redish); Canadian policy and the economic revolution in Asia (John Whalley); reforming Canadian Medicare--redesigning an icon (Ake Blomqvist); tax incentives for owner-occupied housing--then and now (Finn Poschmann); the political economy of inflation targets--New Zealand and the United Kingdom (C. A. E. Goodhart); and monetary union proposals in North America and Southern Africa--questions regarding accountability and goals (J. Clark Leith).

2011	G22	Ahrend, Rudiger, Jens Arnold, and Charlotte Moeser. 2011. <i>The Sharing of Macroeconomic Risk: Who Loses (and Gains) from Macroeconomic Shocks</i> . OECD Publishing, OECD Economics Department Working Papers: 877. This paper addresses the often neglected question of how macroeconomic risk is shared across and within economies, and identifies reforms that could contribute towards achieving more desirable risksharing outcomes. For risk-sharing across countries, the paper discusses possibilities for international insurance as well as shock-spreading and risk-mitigating policies. Within countries, it assesses the possibilities for individuals to protect their wealth, labour and capital income against various forms of macroeconomic risk and discusses the desirable boundaries between private and government-sponsored risk-sharing institutions. The paper then presents new empirical and model-based evidence about how the short-term impact of selected macroeconomic shocks (including financial crises) is shared across different groups of agents, and analyses how such distributional effects are shaped by differences in institutions. For example, individuals on low incomes, and especially young people, seem in general to lose most from adverse macroeconomic shocks. Also, it appears that across countries two broad types of institutions can be identified that facilitate risk sharing between high and low income earners, namely "social protection" and "reallocation-facilitating" institutions. Based on countries' reliance on these types of institutions, four broad "models" of risk sharing are identified across the OECD and the BRIICS.
2011	H51 H74 H81	Herd, Richard, Sam Hill, and Vincent Koen. 2011. <i>Fiscal Prospects and Reforms in India</i> . OECD Publishing, OECD Economics Department Working Papers: 911. Substantial fiscal consolidation was achieved under the aegis of the 2003 Fiscal Responsibility and Budget Management Act. While deficits widened anew in 2008 and 2009, against the backdrop of the global financial and economic crisis, efforts to reduce them have resumed since. To ensure continued progress, as well as stronger government finances in the longer term, the medium-term fiscal framework needs to be improved, notably by embedding the annual budget in a detailed three-year rolling programme. Expenditure needs to be controlled better, in particular as regards subsidies, which the central government has indeed been trying to rein in, though with difficulty in the face of rising world oil prices. Expenditure also needs to become more effective, in particular in the areas of health care, education and social assistance. On the revenue side, tax reforms have been tabled, both for direct taxes and for the complex and inefficient system of indirect taxes. Corporate income tax rates are being cut, though the headline rate remains high. Lower taxation for large special economic zones deserves to be maintained for some time. For the personal income tax, which only a fairly small proportion of the population pays, thresholds are set to be raised considerably. A goods and services tax is to be introduced, which should help reduce the segmentation of the national market for goods and services. Customs duties have been reduced on average but remain high for some categories of imports, implying scope for further reduction over time.

2011	H51	Rosnick, David, and Dean Baker. 2011. <i>Representative Ryan's \$30 Trillion Medicare Waste Tax</i> . Center for Economic and Policy Research (CEPR), CEPR Reports and Issue Briefs. Representative Ryan's proposal to replace the current Medicare system with a system of vouchers or premium supports has been widely described as shifting costs from the government to beneficiaries. However, the size of this shift is actually small relative to the projected increase in costs that would result from having Medicare provided by private insurers instead of the government-run Medicare system. The Congressional Budget Office's (CBO) projections imply that the Ryan plan would add more than \$30 trillion to the cost of providing Medicare equivalent policies over the program's 75-year planning period. This increase in costs--from waste associated with using a less efficient health care delivery system--has not received the attention that it deserves in the public debate.
2011	H51	Baker, Dean, and David Rosnick. 2011. <i>The Ryan Medicare Plan: Winners and Losers</i> . Center for Economic and Policy Research (CEPR), CEPR Reports and Issue Briefs. Representative Paul Ryan's proposed 2012 budget has been lauded as a path to prosperity, with much attention given to his overhaul of the medicare system. Using data from the CBO analysis of the Ryan plan, this issue brief demonstrates that any savings to the government under the revamped medicare

2011	H81 H82	Rawdanowicz, Lukasz, Eckhard Wurzel, and Patrice Ollivaud. 2011. <i>Current Issues in Managing Government Debt and Assets</i> . OECD Publishing, OECD Economics Department Working Papers: 923. The management of government debt and assets has important implications for fiscal positions. Debt managers aim to secure non-interrupted funding at lowest medium-term costs subject to risks. Massive crisis-related increases in government debt in most OECD countries and increased risks on the asset side of government balance sheets may imply attaching a larger weight to avoiding risk than prior to the crisis, suggesting to extend debt maturities, possibly above pre-crisis levels. There are a number of trade-offs. Choices on the debt maturity structure interact with unconventional monetary policies. By driving down longer-term yields, the latter increase incentives to extend debt maturities which could counteract the initial monetary policy goal. High debt raises the temptation for eroding it via inflation, but the effectiveness of such policy seems to be limited and might be costly in the long run. Moreover, debt management needs to contribute to ensuring appropriate liquidity and functioning of government bond markets. Building financial assets can be appropriate for some purposes, such as prefunding future temporary spending or transferring wealth to future generations, but the risks are that accumulated funds might be used for current spending or tax reductions. In addition, assets might do little to hedge risks associated with debt servicing costs. Non-financial asset sales can help improve the fiscal situation, but purely revenue-driven privatisations without appropriate regulatory provisions addressing potential market failures should be avoided. Successful balance sheet management requires transparent, accurate and comprehensive measures of not only current but also future assets and liabilities.

2011	J15	Varjavand, Reza. 2011. "Growing Underground Economy: The Evidence, the Measures, and the Consequences." <i>Journal of International Management Studies</i> , 11(3): 133-42. The underground economy (UE) in the United States has kept growing especially during recent years especially following the great recession of 2007. It is a ubiquitous problem and like other economic ills it has no definitive cure. For the most part, cash transactions or illegal enterprises such as drug trafficking, prostitution, and gambling constitute the lion's share of an underground economy; it is not, however, limited to such activities. Legal transactions or jobs can also go underground for various reasons, most notably the avoidance of having to pay taxes or receiving government handouts while working at a paid job. Accurate assessment of the actual size of the UE is next to impossible for the obvious reasons that its activities are clandestine and its inhabitants remain anonymous. For that reason, researchers have utilized a variety of proxy measures; the most often relied upon is the amount of currency in circulation, cash outside commercial banks. This paper discusses some of these measures together with the detrimental consequences of underground economy. The distortions created by the UE are damaging not only to the official economy but also to government policy makers because these distortions impede their ability to make proper macroeconomic decisions that are based on accurate assumptions about economic variables such as the poverty rate, the unemployment rate, and the pace of aggregate income and spending. The UE is obviously a more complicated issue than what is addressed by this paper. More thorough and timely analyses backed by empirical evidence are necessary to the formulation of effective remedies for the UE and its related problems. Also, policy makers need to have accurate estimates of its size and causes in order to be able to devise suitable economic policies.
2011	J33	Schmitt, John. 2011. <i>Labor Market Policy in the Great Recession: Some Lessons from Denmark and Germany</i> . Center for Economic and Policy Research (CEPR), CEPR Reports and Issue Briefs. This paper reviews the recent labor-market performance of 21 rich countries, with a focus on Denmark and Germany. Denmark, which was widely seen as one of the world's most successful labor markets before the downturn, has struggled in recent years. Germany, however, has outperformed the rest of the world's rich countries since 2007, despite earlier labor-market difficulties. Labor-market institutions seem to explain the different developments in the two economies. Danish institutions--which include extensive opportunities for education, training, and placement of unemployed workers--appear to perform well when the economy is at or near full employment, but have not been effective during the downturn. German labor-market institutions, which emphasize job security by keeping workers connected to their current employers, may have drawbacks when the economy is operating at or near full employment, but have performed well in the Great Recession. The paper also discusses lessons for U.S. labor-market policy.
2011	J33	Schmitt, John, and David Rosnick. 2011. <i>The Wage and Employment Impact of Minimum-Wage Laws in Three Cities</i> . Center for Economic and Policy Research (CEPR), CEPR Reports and Issue Briefs. This report analyzes the wage and employment effects of the first three city-specific minimum wages in the United States -San Francisco (2004), Santa Fe (2004), and Washington, DC (1993). We use data from a virtual census of employment in each of the three cities, surrounding suburbs, and nearby metropolitan areas, to estimate the impact of minimum-wage laws on wages and employment in fast food restaurants, food services, retail trade, and other low-wage and small establishments.
2011	J61	Schmitt, John, and Kris Warner. 2011. <i>Deconstructing Structural Unemployment</i> . Center for Economic and Policy Research (CEPR), CEPR Reports and Issue Briefs. Some economic observers argue "structural unemployment" has increased in the wake of the Great Recession, but in this paper we find little support for either of two arguments that suggest that structural unemployment has been on the rise. The first argument focuses on the large increase in unemployment among construction workers. The second argument is that falling house prices have reduced the mobility of unemployed workers--creating a "housing lock" in which unemployed workers, who would otherwise relocate to regions with jobs, are stuck in high unemployment areas.
2011	K49	Gander, James P. 2011. <i>Macroeconomic Analysis of Corruption in Developing Economies</i> . University of Utah, Department of Economics, Working Paper Series, Department of Economics, University of Utah. Based on empirical data, a two-equation game-

Year	DE	Title and Abstract
	M29	type corruption reaction function model was developed. A "data to model" approach was used rather than the usual a priori approach. The general hypothesis tested was the "monkey see, monkey do" principle. The latest data on corruption among developing countries was obtained from the Enterprise Surveys done by the World Bank Group in 2010. The key variables were the percent of domestic firms expecting to make informal payment to public officials to "get things done," and the percent of foreign firms doing like wise. The time span is from 2002-2010. A variety of econometric methods were used. In general, the statistical results were quite good and supported the hypothesis. Both reaction equations were positively sloped. Time had a reducing effect on the frequency of domestic corruption, yet it had an increasing effect on foreign corruption. Variations in the frequency of corruption across regions of countries were generally not significant.
2011	L61	Osborne, Matthew, and Nathan Miller. 2011. <i>Competition among Spatially Differentiated Firms: An Estimator with an Application to Cement</i> . Bureau of Economic Analysis, BEA Working Papers. We develop an estimator for models of competition among spatially differentiated firms. In contrast to existing methods (e.g., Houde (2009)), the estimator has flexible data requirements and is implementable with data that are observed at any level of aggregation. Further, the estimator is the first to be applicable to models in which firms price discriminate among consumers based on location. We apply the estimator to the Portland cement industry in the U.S. Southwest over 1983-2003. We estimate transportation costs to be \$0.30 per tonne-mile and show that, given the topology of the U.S. Southwest, these transportation costs permit more geographically isolated plants to discriminate among consumers. We conduct a counterfactual experiment and determine that disallowing this spatial price discrimination would increase consumer surplus by \$12 million annually, relative to a volume of commerce of \$1.3 billion. Heretofore it has not been possible to examine the surplus implications of spatial price discrimination in specific, real-world settings; these implications have been known to be ambiguous theoretically since at least Gronberg and Meyer (1982) and Katz (1984). Additionally, our methodology can be used to construct transportation margins, which are an important component of input-output tables.

2011	Q32	Hailu, Degol, and John Weeks. 2011. <i>Macroeconomic Policy for Growth and Poverty Reduction: An Application to Post-Conflict and Resource-Rich Countries</i> . United Nations, Department of Economics and Social Affairs, Working Papers. A fundamental shift in macroeconomic policy thinking is taking place. This shift opens a space for implementing policies that promote growth and reduce poverty in developing countries. In this paper, policies for post-conflict and resource-rich economies are outlined. Fiscal policy would focus on revenue mobilization, scaling-up public investment, and preventing over-heating. Monetary policies would revive the financial sector, prevent inflationary pressures and stimulate private sector investment. Exchange rate policies should focus on achieving slow depreciation and maintaining international competitiveness. These policies should not be considered in isolation from each other, but in coordination.

2011	R30	Kowalski, Tadeusz, and Yochanan Shachmurove. 2011. <i>An Historical Walk Through Recent Financial Crises</i> . Penn Institute for Economic Research, Department of Economics, University of Pennsylvania, PIER Working Paper Archive. This paper analyzes the causes and implications of recent financial crises. Financial crises in general lead to changes in both theory and practice of economics. The paper takes an historical overview. The global consensus of economic theory during the 20th century is discussed. The paper describes the Bretton Woods regime after World War II, details the era of adaptive expectations and motivates the emerging of the rational expectations school of thoughts. Various perspectives on the causes of the financial crisis are incorporated. The paper provides some policy suggestions and remarks on the consequences of ever-changing capital markets.
2012		
2012	C35	Gnangnon, Kimm. 2012. <i>Structural Vulnerability and Excessive Public Indebtedness in CFA Franc Zone Countries</i> . CERDI Working Papers: 201237. This paper relies on the 'institutional debt rule' implemented in Franc Zone countries to assess whether the structural vulnerability of these countries matter for their probability to enter into excessive indebtedness. This structural vulnerability is measured by retrospective 'Economic Vulnerability Index' (EVI) recently computed jointly by the United Nations and Guillaumont et al., (2011). We observe evidence that the impact of 'EVI' is non-linear with respect to the probability of these countries to engage into excessive indebtedness and that, this effect appears to be the same for the two monetary areas belonging to the CFA Franc Zone countries: a rise of EVI induces a higher probability of excessive debt and for higher EVI, this probability declines. Consequently, international development institutions such as the Bretton Woods should take into account such vulnerability in their assessment of the adequate development policies and recommendations to these countries.
2012	D53	Schroth, Josef. 2012. <i>Financial Crisis Resolution</i> . Bank of Canada, Working Papers. This paper studies a dynamic version of the Holmstrom-Tirole model of intermediated finance. I show that competitive equilibria are not constrained efficient when the economy experiences a financial crisis. A pecuniary externality entails that banks' desire to accumulate capital over time aggravates the scarcity of informed capital during the financial crisis. I show that a constrained social planner finds it beneficial to introduce a permanent wedge between the deposit rate and the economy's marginal rate of transformation. The wedge improves

Year	DE	Title and Abstract
		borrowers' access to finance during a financial crisis by strengthening banks' incentives to provide intermediation services. I propose a simple implementation of the constrained-efficient allocation that limits bank size.
2012	F44	Samonis, Val. 2012. "Macro Prudential Regulation and Governance in Long Cycles: Towards Modern Experiential Learning Approach." <i>Transnational Corporations Review</i> , 4(1): 46-55. We have not yet learned how to adapt to modern innovation challenges in the global economy's long cycles and how to govern the associated risks. All the traditional economic theories are too simplistic and do not account for the change in the speeds of global adjustments (esp. financial flows) in the modern digital and knowledge economy. This special analysis reveals that, inadequacies at micro- and macro-levels in the political-economic systems in the global economy cause a new type of crises which cannot be easily contained, let alone prevented, on the strengths of the classical self-correction mechanisms.
2012	F44	Bird, Graham, Alex Mandilaras, and Helen Popper. 2012. "Is There a Beijing Consensus on International Macroeconomic Policy?" <i>World Development</i> , 40(10): 1933-43. Some commentators have claimed that there is a growing Beijing Consensus among emerging and developing economies concerning the merits of China's economic policies. Within an analytical framework provided by the well known international policy trilemma, this paper investigates the empirical evidence concerning this claim with specific reference to the adoption of international macroeconomic policies. We find that there are substantial differences between what China does and what is done in other emerging and developing economies. While we discover some regional and inter-temporal variations, there seems to be little or no support for the existence of a Beijing Consensus.
2012	F59	Azzimonti, Marina, Eva de Francisco, and Vincenzo Quadrini. 2012. <i>Financial Globalization, Inequality, and the Raising of Public Debt</i> . C.E.P.R. Discussion Papers, CEPR Discussion Papers: 8893. During the last three decades, the stock of government debt has increased in most developed countries. During the same period, we also observe a significant liberalization of international financial markets and an increase in income inequality in several industrialized countries. In this paper we propose a multicountry political economy model with incomplete markets and endogenous government borrowing and show that governments choose higher levels of public debt when financial markets become internationally integrated and inequality increases. We also conduct an empirical analysis using OECD data and find that the predictions of the theoretical model are supported by the empirical results.
2012	F62	Joia, Radu-Marcel, and Catalin-Emilian Huidumac-Petrescu. 2012. "Analysis of the American Economic System--From the Old Capitalism to the New Capitalism." <i>Theoretical and Applied Economics</i> , 19(6): 165-74. In the past years, the globalization has generated a significant development of the emergent economies, but also that of the level of the developed countries. As it is easy to notice, we are the spectators of an ever more "globalized" world which does not lack numerous risks. Starting with the inequality between the people, continuing with various social problems and ending with the "creative destruction" of some countries' economies, an inevitable and irreversible destruction after entering into this game, the globalization phenomenon has become a threat. The globalization has opened, in the absence of economic protective policies, the way of frequent economic crises. The present crisis has taught us that the governments of the countries should play a more active role in the co-ordination of the economic policies, striving to prevent unbalances as those registered already and to avoid crises.
2012	H12	Rendahl, Pontus. 2012. <i>Fiscal Policy in an Unemployment Crisis</i> . Faculty of Economics, University of Cambridge, Cambridge Working Papers in Economics. This paper argues that the effectiveness of fiscal policy may increase markedly during periods of low nominal interest rates and high, persistent, unemployment. An increase in government spending boosts economic activity and reduces the unemployment rate both in the present and in the future. As a less disconcerting future spurs a rise in private consumption, unemployment falls even further and triggers an additional rise in private demand, and so on. In a stylized model, I show that the marginal impact of government spending on output is equal to the reciprocal of the elasticity of intertemporal substitution. In a more realistic framework, the effect is somewhat attenuated and displays significant nonlinearities with respect to the depth of the crisis as well as the size of the stimulus package. But in a severe recession with an unemployment rate of eight percent or above, the fiscal multiplier is equal to 1.5.
2012	I13	Edlin, Aaron S., and Joseph E. Stiglitz, eds. 2012. <i>The Economists' Voice 2.0: The Financial Crisis, Health Care Reform, and More</i> . New York and Chichester: Columbia University Press. Thirty-two papers, reprinted from the online journal <i>The Economists' Voice</i> , examine recent financial developments. Papers focus on health care reform; financial market regulatory reform; the financial crisis and bailouts; and innovations in policy and business.
2012	I13	Hansen, Gary D., Minchung Hsu, and Junsang Lee. 2012. <i>Health Insurance Reform: The Impact of a Medicare Buy-In</i> . National Bureau of Economic Research, Inc. NBER Working Papers: 18529. The steady state general equilibrium and welfare consequences of health insurance reform are evaluated in a calibrated life-cycle economy with incomplete markets and endogenous labor supply. Individuals face uncertainty each period about their future health status, medical expenditures, labor productivity, access to employer provided group health insurance, and the length of their life. In this environment, incomplete markets and adverse selection, which restricts the type of insurance contracts available in equilibrium, creates a potential role for health insurance reform. In particular, we consider a policy reform that would allow older workers (aged 55-64) to purchase insurance similar to Medicare coverage. We find that adverse selection eliminates any market for a Medicare buy-in if it is offered as an unsubsidized option to individual private health insurance. Hence, we compare the equilibrium properties of the current insurance system with those that obtain with an optional buy-in subsidized by the government, as well as with several types of health insurance mandates.
2012	I14 I15	Ajayi, S. Ibi. 2012. "Effects of Macroeconomic Policies on Health." <i>African Development Review/Revue Africaine de Développement</i> , 24(4): 270-78. The paper highlights that macroeconomic policies do not often confer anticipated positive benefits in the desired direction. Indeed, macroeconomic policies may impact health outcomes negatively, create inequality, and some other undesirable effects which may have significant effects on social well-being. While macroeconomic policies can have great impacts on health outcomes, the nature of the impacts of macroeconomic variables on health or proximate determinants of health is complex because they operate through the whole economy with significant lags. As a result of the non-availability of theoretical guidance on the appropriate measurement of health outcomes, the multiplicity of the various indicators gives rise to subjective interpretations of results. There are a number of areas where future research should focus. These include developing a better understanding of the transmission mechanism from macroeconomics policies to health outcome variables, and how macroeconomic policies can be made more effective and minimize the possible negative impacts on health outcomes.

2012	I25	Dastidar, Sayantan, Sushil Mohan, and Monojit Chatterji. 2012. <i>The relationship between public education expenditure and economic growth: The case of India</i> . Economic Studies, University of Dundee, Dundee Discussion Papers in Economics: 273.

Year	DE	Title and Abstract
		The paper reviews the theoretical and the empirical case for public investment in education in India. Though the theoretical literature provides a backing for such a policy, the empirical literature fails to find a robust relation between education expenditure and growth. Expenditure on education is a necessary but not a sufficient condition for growth. It seems that the effectiveness of education expenditure depends on the institutional and labour market characteristics of the economy. The effectiveness of education investments also depends on other factors such as trade openness. Due to these aforesaid factors, we argue that the empirical relation between education expenditure and growth for India has been inconsistent.
2012	J12	Bick, Alexander, and Nicola Fuchs-Schündeln. 2012. <i>Taxation and Labor Supply of Married Women across Countries: A Macroeconomic Analysis</i>. C.E.P.R. Discussion Papers, CEPR Discussion Papers: 9115. We document contemporaneous differences in the aggregate labor supply of married couples across 19 OECD countries. We quantify the contribution of international differences in non-linear labor income taxes and consumption taxes, as well as male and female wages, to the international differences in the data. Our model replicates the comparatively small differences of married men's hours worked very well. Moreover, taxes and wages account for a large part of the observed substantial differences in married women's labor supply between the US and Western, Eastern, and Northern Europe, but cannot explain the low labor supply of married women in Southern Europe.
2012	K23	Vamvakas, Nancy A. 2012. <i>Europeanizing Greece: The Effects of Ten Years of EU Structural Funds, 1989-1999</i>, European Union Studies. Toronto and Buffalo: University of Toronto Press. Examines the changes that the European Union's structural policy made to the Greek administrative and political system in the span of two structural periods--Community Support Framework 1989-93 and Community Support Framework 1994-99. Discusses Europeanization in the case of Greece; Europeanization manifested in legislative reforms; Europeanization as political adaptation to the structural programs, 1989-99; political adaptation and center-periphery politics; and a few tentative conclusions.
2012	N94	Shelburne, Robert. 2012. <i>Restoring Stability to Europe</i>. UNECE, ECE Discussion Papers Series: 2012_3. The eurozone is in political and economic crisis. This is due to the inadequate design of the institutional structure of the eurozone and to the current poor implementation of macroeconomic policy. In designing the eurozone, well established principles of economics were ignored and major decisions were based primarily upon political considerations. Thus it was only a matter of time before these defects would become apparent. In addressing the current crisis that has developed policy makers have misdiagnosed the causes of the crisis and implemented solutions that are largely counterproductive to solving it. This paper describes the underlying factors that led to the inadequate design and improper macroeconomic response and explains what will be necessary in order to create an institutional structure and macroeconomic policy framework that can restore economic stability and growth to the region.
2012	O18	Baer, Werner, ed. 2012. <i>The Regional Impact of National Policies: The Case of Brazil</i>, Cheltenham, U.K. and Northampton, Mass.: Elgar. Twelve papers, based on presentations made at a conference held in Porto de Galinhas, Pernambuco, Brazil, in November 2010, explore how the Brazilian government's general economic policies have influenced the regional distribution of economic growth. Papers discuss the regional impacts of Juscelino Kubitschek's Targets Program; regional imbalances in Brazil according to social inclusion; social programs, industrial deconcentration, and the recent decrease in regional income inequality in Brazil; labor policies in Brazil; the impact of privatization on Brazil's regions; science, technology, and innovation policies in the regional development of Brazil; foreign direct investment in Brazil from a regional perspective; stabilization policies and regional development in Brazil; the use of native forests versus economic growth in Brazil--whether it is possible to reach a balance; regional development and agricultural expansion in Brazil's Legal Amazon--the case of the Mato Grosso frontier; Embrapa--its origins and changes; and the regional impact of federal government programs in Brazil--the case of Rio de Janeiro.
2012	O44	Engwerda, J. C. 2012. <i>Prospects of Tools from Differential Games in the Study Of Macroeconomics of Climate Change</i>. Tilburg University, Center for Economic Research, Discussion Paper: 2012-045. Abstract: In this note we sketch a dynamic framework within which the discussion on the macro economic effects of climate change take place. The problem setting is characterized by scientific uncertainties about the development of climate, potential large economic losses and human beings having their specific features. Some considerations about climate change, macroeconomics and their relationship are given. A characteristic feature of the problem setting is that there are multiple decision makers interacting in a dynamic world with large uncertainties. Problems of this type have been studied extensively by (dynamic) game theory. A rough literature review is provided and some items open for future research are indicated.

2013	C13	Mittnik, Stefan, and Willi Semmler. 2013. <i>The Real Consequences of Financial Stress</i>. Sonderforschungsbereich 649, Humboldt University, Berlin, Germany, SFB 649 Discussion Papers: SFB649DP2013-011. We introduce a dynamic banking-macro model, which abstains from conventional mean-reversion assumptions and in which--similar to Brunnermeier and Sannikov (2010)--adverse asset-price movements and their impact on risk premia and credit spreads can induce instabilities in the banking sector. To assess such phenomena empirically, we employ a multi-regime vector autoregression (MRVAR) approach rather than conventional linear vector autoregressions. We conduct bivariate empirical analyses, using country-specific financial-stress indices and industrial production, for the U.S., the UK and the four large euro-area countries. Our MRVAR-based impulse-response studies demonstrate that, compared to a linear specification, response profiles are dependent on the current state of the economy as well as the sign and size of shocks. Previous multi-regime-based studies, focusing solely on the regime-dependence of responses, conclude that, during a high-stress period, stress-increasing shocks have more dramatic consequences for economic activity than during low stress. Conducting size-dependent response analysis, we find that this holds only for small shocks and reverses when shocks become sufficiently large to induce immediate regime switches. Our findings also suggest that, in states of high financial stress, large negative shocks to financial-stress have sizeable positive effects on real activity and support the idea of "unconventional" monetary policy measures in cases of extreme financial stress.
2013	E41	Keating, John, and Andrew Lee Smith. 2013. <i>Price Versus Financial Stability: A role for money in Taylor rules?</i>. University of Kansas, Department of Economics, WORKING PAPERS SERIES IN THEORETICAL AND APPLIED ECONOMICS: 201307. This paper analyzes optimal monetary policy in a standard New-Keynesian model augmented with a financial sector. The banks in the model are subject to shocks which impede their ability and willingness to produce financial assets. We show these financial market supply shocks decrease both the natural rates of output and interest. The implication is that an optimizing central bank with real time data on only inflation, output, interest rate spreads and monetary aggregates will respond positively to the growth rate of monetary aggregates which signal movement in the natural rate from these financial shocks. This simple rule is implementable by central banks as it makes the policy instrument a function of only observables and does not require precise knowledge of the model or the parameters. The key is the use of the Divisia monetary aggregate which provides a parameter--and estimation--free approximation to the the true monetary aggregate. We show policy rules reacting to the Divisia monetary

Year	DE	Title and Abstract
		aggregate have well-behaved determinacy properties--satisfying a novel Taylor principle for monetary aggregates. Finally, we conclude with a minimax robust policy prescription given the uncertainty surrounding parameters driving the financial and other structural shocks.
2013	F54	Grossman, Richard S. 2013. <i>Wrong: Nine Economic Policy Disasters and What We Can Learn from Them</i>, Oxford and New York: Oxford University Press. Examines nine of the worst economic policy mistakes of the last 250 years in order to learn why these policies were adopted and how they went wrong. Discusses British imperial policy in North America; the first and second banks of the United States; famine in Ireland, 1845-52; German reparations after World War I; Britain's return to the gold standard, 1925-31; the Smoot-Hawley tariff, 1930; Japan's lost decade; the subprime meltdown; the euro; and what we have learned and where do we go from here.
2013	J28	Lechthaler, Wolfgang, and Dennis J. Snower. 2013. <i>Worker Identity, Employment Fluctuations and Stabilization Policy</i>. C.E.P.R. Discussion Papers, CEPR Discussion Papers: 9478. This paper provides a model of "social hysteresis," whereby long, deep recessions demotivate workers and thereby lead them to change their work ethic. In switching from a pro-work to an anti-work identity, their incentives to seek and retain work fall and consequently their employment chances fall. In this way, temporary recessions may come to have permanent effects on aggregate employment. We also show that these permanent effects, along with the underlying identity switches, can be avoided through stabilization policy. The size of the government expenditure multiplier can be shown to depend on the composition of identities in the workforce.
2013	N90	Cosgel, Metin M., and Bogac A. Ergene. 2013. <i>The Selection Bias in Court Records: Settlement and Trial in Eighteenth Century Kastamonu</i>. University of Connecticut, Department of Economics, Working papers: 2013-12. Court records are used extensively in historical research. Preserved as summaries of daily legal proceedings, they give historians a unique opportunity of access to the information about the names, personal characteristics, and socio-economic status of individuals and about the laws, local customs, and legal institutions that were used in resolving disputes. Although researchers have thoroughly discussed the limitations of these records in accurately reflecting court proceedings, the problem of selection bias has not been systematically studied. Since litigants would likely settle disputes in which one side is likely to be a clear winner, the cases that go to trial would likely be the difficult and uncertain ones for which there is greater disagreement, altogether comprising a non-random and unrepresentative subset of all disputes. We study the selection bias in Ottoman courts in the town of Kastamonu in northern Anatolia, from the late seventeenth and the eighteenth centuries. We separate disputes by type and study the distribution of court participants according to size, gender, and religious and socioeconomic status. We run regression analysis to determine the factors affecting the likelihood of cases being tried in court. Our results indicate that the cases that wound up in court were selected systematically. If the selection bias is ignored, research based on Ottoman court records may be seriously flawed in its ability to yield general conclusions.
2013	N90	Cosgel, Metin M., Bogac A. Ergene, and Atabey Kaygun. 2013. <i>A temporal analysis of wealth in eighteenth-century Ottoman Kastamonu</i>. University of Connecticut, Department of Economics, Working papers: 2013-03. This article studies temporal variations in wealth levels and distribution in an Ottoman context during the eighteenth century. By analysing the probate estate inventories of the Muslim deceased in Kastamonu, located in north-central Anatolia, we demonstrate that real wealth levels generally declined over the course of the century. Our analysis also suggests that the economic conditions of poor men, if not women, deteriorated more so than those of the rich, fuelling growing inequality. The article explores the factors that contributed to these trends and discusses the relevance of our findings for long-term economic development patterns in the region from a comparative perspective.
2013	N90	Cosgel, Metin M., and Bogac A. Ergene. 2013. <i>"Law and Economics" Literature and Ottoman Legal Studies</i>. University of Connecticut, Department of Economics, Working papers: 2013-02. This article considers the relevance of hypotheses developed in the "law and economics" literature regarding settlement/trial decisions in the Ottoman Empire. In particular, it explores the applicability of the "selection principle" and "50 percent plaintiff win-rate" formulated by George Priest and Benjamin Klein. The article also demonstrates how existing research based on Ottoman court records can contribute to the "law and economics" scholarship, which is dominated by research based on modern, Western contexts. The article utilizes the court records from eighteenth-century Kastamonu to make observations about settlement/litigation decisions in an Ottoman context.
2013	R33	Olszewski, Krzysztof. 2013. "The Commercial Real Estate Market, Central Bank Monitoring and Macroprudential Policy." <i>Review of Economic Analysis</i>, 5(2): 213-50. This article reviews the impact of commercial real estate (CRE hereafter) on macrofinancial stability and discusses some ideas on how central banks could deal with the risk that it can impose to the financial stability. First, we present the main features of the CRE market, explain its cycle, and outline risks related to this market. We discuss the relationship between the CRE market and the financial system. For several countries that experienced a CRE crisis, we critically assess the reactions of their central banks. We conclude that the CRE market should be tracked by the central bank and present some ideas for the data collection and details of the analysis of the CRE market. Finally, we provide some suggestions for the macroeconomic and financial stability policies of central banks which should help to reduce risk and enhance the growth of the CRE market.

2006	B53	Basse, Tobias. 2006. "An Austrian Version of the Lucas Critique." <i>Quarterly Journal of Austrian Economics</i>, 9(1): 15-26.
2006	C15	Liu, Philip. 2006. <i>GAINS FROM COMMITMENT POLICY FOR A SMALL OPEN ECONOMY: THE CASE OF NEW ZEALAND</i>. Australian National University, Centre for Applied Macroeconomic Analysis, CAMA Working Papers. The importance of the time-consistency problem depends critically on the model one is working with and its parameterizations. This paper attempts to quantify the magnitude of stabilization bias for a small open economy using an empirically estimated micro-founded dynamic stochastic general equilibrium model. The resultant model is used to investigate the degree to which precommitment policy can improve welfare. Rather than presenting a point estimate of the welfare gain measures, the paper maps out the entire distribution of the welfare gain using the Bayesian posterior distribution of the model's parameters. The welfare improvement is an increasing function of the weight the central bank places on exchange rate variability. However, there is no simple relationship between the gains from precommitment and the degree of openness of the economy.
2006	C21	CV; Meghir, Costas. 2006. "Dynamic Models for Policy Evaluation." In <i>Advances in Economics and Econometrics: Theory and Applications, Ninth World Congress. Volume 2</i>, ed. In <i>Advances in Economics and Econometrics: Theory and Applications, Ninth World Congress. Volume 2</i>, ed. Richard Blundell, Whitney K. Newey and Torsten Persson, 311-21. Econometric Society Monographs, no. 42. Cambridge and New York: Cambridge University Press.
2006	F37 F53 G38 H43 H83 O22	Schouwstra, Marije, and Michael Ellman. 2006. <i>A New Explanatory Model for Policy Analysis and Evaluation</i>. Tinbergen Institute, Tinbergen Institute Discussion Papers: 06-063/2. This model of policy evaluation has been developed to identify factors that cause policy outcomes to diverge from the intended results. In this model the explanatory factors may be inherent to the conceptual and institutional framework to which policy makers adhere, or they may be 'real world' factors such as badly-defined performance indicators or cyclical economic problems. This model can be used by scholars for analyzing and evaluating government policies and the policies of international organizations and by policy makers to improve their policies. The model can also be used for cross-country comparisons to establish why a certain policy works in one country or situation and why it does not work in another country or situation.
2006	F37	Bernal, Oscar. 2006. <i>Do interactions between political authorities and central banks influence FX interventions? Evidence from Japan</i>. Université libre de Bruxelles, Department of Applied Economics (DULBEA), Working Papers DULBEA: 06-03.RS. In the United States, Japan and the Euro Zone, FX interventions are institutionally decided by specific political authorities and implemented by central banks on their behalf. Bearing in mind that these specific political authorities and central banks might not necessarily pursue the same exchange rates objectives, the model proposed in this paper takes account explicitly of this institutional organisation to examine its effects on FX intervention activity. The empirical relevance of our theoretical model is assessed by developing a friction model on the Japanese experience between 1991 and 2004 which reveals how the magnitude of that country's FX interventions is the outcome of the Japanese Ministry of Finance's trade-off between attaining its own exchange rate target and one of the Bank of Japan's.
2006	F51	Viktorova, Dana. 2006. "Risks of an Inconsistency between the Fiscal Policy and the External Balance in a Short Term Period within the Context of the Maastricht Criteria--A Focus on the Czech Republic." <i>Ekonomie a Management</i>, 9(4): 5-26. The article tried to analyze the relation between the fiscal policy attitude and the external balance in the Czech Republic within the context of the Maastricht criteria. The article explores what is the impact of budget deficit decrease on the exchange rate development. We analyzed the effect of public finance consolidation on exchange rate development based on the current econometric approach using vector autoregression modelling amended by the impulse-response functions. This issue is based on the theoretical approach

Year	DE	Title and Abstract
		exploring the relationship between the fiscal policy attitude and the exchange rate development, revealing the contributions of the direct and indirect channel of the budget deficit decrease. Results of the carried out estimations proved that it is not possible to take into account purely statistical point of view. We closed the article with answering a key question--the dominance of the direct channel in the Czech economy might cause that a fiscal policy consolidation leads to the exchange rate depreciation and thus the Czech Republic might fail to meet Maastricht criteria on the exchange rate stability.
2006	F53	THE SAME AS F37 Schouwstra, Marije, and Michael Ellman. 2006. <i>A New Explanatory Model for Policy Analysis and Evaluation</i> . Tinbergen Institute, Tinbergen Institute Discussion Papers: 06-063/2.
2006	F55	Jonung, Lars. 2006. "Comments on J. Christl: 'Regional Currency Arrangements: Insights from Europe.'" <i>International Economics and Economic Policy</i> , 3(3-4): 221-24.
2006	F55	Christl, Josef. 2006. "Regional Currency Arrangements: Insights from Europe." <i>International Economics and Economic Policy</i> , 3(3-4): 209-19. This paper focuses on the requirements and features of a successful monetary union on the basis of the optimum currency area theory, the "logical roadmap" for integration as proposed by Balassa as well as the economic and institutional framework of the European Economic and Monetary Union (EMU). The analysis suggests that monetary union is contingent upon high economic integration and strong political commitment. However, political union is not an ex-ante requirement. Outside factors such as systemic shocks and globalization seem to speed up the pooling of sovereignty in the economic domain. A firm commitment to stability-oriented monetary and fiscal policies is a precondition for gaining credibility and trust within and outside a monetary union. Last, but not least, convergence criteria, fiscal rules and strong institutions are necessary to help ensure and monitor the participants' compliance. However, the European experience is not a blueprint for regional integration that can be directly and entirely applied to other regions.

2006	J13	DE LA CROIX, David, and Axel GOSSERIES. 2006. <i>Population policy through tradable procreation entitlements</i> . Université catholique de Louvain, Center for Operations Research and Econometrics (CORE), CORE Discussion Papers: 2006081. Tradable permits are now widely used to control pollution. We investigate the implications of setting up such a system in another area population control, either domestically or at the global level. We first generalize the framework with both tradable procreation allowances and tradable procreation exemptions, in order to tackle both over- and under-population problems. The implications of procreation rights for income inequality and education are contrasted. We decompose the scheme's impact on redistribution into three effects, one of them, the tradability effect, entails the following: with procreation exemptions or expensive enough procreation allowances, redistribution benefits the poor. In contrast, cheap procreation allowances redistribute resources to the rich. As far as human capital is concerned, natalist policy worsens the average education level of the next generation, while population control enhances it. If procreation rights are granted to countries in proportion to existing fertility levels (grandfathering) instead of being allocated equally, population control can be made even more redistributive. Our exploratory analysis suggests that procreation entitlements offer a promising tool to control population without necessarily leading to problematic distributive impact, especially at the global level.
2006	J13	DE LA CROIX, David, and Axel GOSSERIES. 2006. <i>Procreation, migration and tradable quotas</i> . Université catholique de Louvain, Center for Operations Research and Econometrics (CORE), CORE Discussion Papers: 2006098. First, we briefly discuss the very idea of tradable quotas, looking at a set of cases in which it has been proposed (but not implemented) outside the realm of pollution control of natural resources management. Next we study a proposal of tradable procreation quotas. We generalize Boulding's 1964 idea and discuss a full scheme able to deal both with under and over procreation. We then look more specifically at three effects of the scheme on income inequalities: differential productivity effect, differential fertility effect and tradability effect. Finally, we consider the migration dimension and discuss two possible schemes: (1) a domestic scheme of tradable emigration quotas among skilled people, serving as a possible alternative to a Baghwati tax (with different properties); (2) a regional or global scheme of tradable immigration quotas of unskilled workers in rich countries, serving as a "burden sharing" mechanism. Special attention is given to some conjectures regarding the impact on education and average income back in the (poor) countries of origin.
2006	J52	Heise, Arne. 2006. "Market Constellations and Macroeconomic Policymaking: Institutional Impacts on Economic Performance." <i>Intereconomics/Review of European Economic Policy</i> , 41(5): 272-81. The following article presents a broad outline of a market participation theory of economic policy and attempts to determine how macroeconomic demand management can be used to influence market constellations. On that basis it then inquires into how far macroeconomic governance can be used to explain the different growth and employment performances of selected EU countries.
2006	J52	Acocella, N., G. Di Bartolomeo, and Andrew Hughes Hallett. 2006. "Controllability in Policy Games: Policy Neutrality and the Theory of Economic Policy Revisited." <i>Computational Economics</i> , 28(2): 91-112. Issues of policy effectiveness and policy neutrality are widespread in the economic literature. They have been raised in a number of specific contexts over the past 20 years, most notably with reference to monetary policy. However, the general conditions which ensure the non-neutrality of any

Year	DE	Title and Abstract
		or all the policy instruments available to a policymaker in a strategic context still remain to be derived. To do that, this paper provides a generalization of the classical theory of economic policy developed by Tinbergen, Theil and others to a strategic environment. Computational algorithms, so that neutrality and controllability can be tested in practice, are given. We show that many of the standard policy neutrality propositions of monetary theory and in wage bargaining models then drop out as special cases of our encompassing approach but with much simpler interpretations.
2006	O22	THE SAME AS F37 Schouwstra, Marije, and Michael Ellman. 2006. <i>A New Explanatory Model for Policy Analysis and Evaluation</i> . Tinbergen Institute, Tinbergen Institute Discussion Papers: 06-063/2.
2007		
2007	B00	Frey, Bruno S., Silke Humbert, and Friedrich Schneider. 2007. "Was denken deutsche Ökonomen? Eine empirische Auswertung einer Internetbefragung unter den Mitgliedern des Vereins für Socialpolitik im Sommer 2006. (With English summary.)" <i>Perspektiven der Wirtschaftspolitik</i> , 8(4): 359-77. This article presents the results of a survey among the members of the "Verein für Socialpolitik", the association of German speaking economists, containing questions on schools of thought, economic role models and policy issues. A probit analysis is used to identify to what extent ideological preferences or personal facts determine the respondent's opinion. Some of the questions were already asked a quarter of a century ago so that it is possible to track the changes in view among economists. One of the most important findings is that neoclassical economics has become more strongly accepted.
2007	C25	RAULT, Christophe, Ana Maria SOVA, and Robert SOVA. 2007. <i>The Endogeneity of Association Agreements and their Impact on Trade for Eastern Countries: Empirical Evidence for Romania</i> . William Davidson Institute at the University of Michigan Stephen M. Ross Business School, William Davidson Institute Working Papers Series: wp868. The main goal of regionalization is the creation of free trade areas and the guarantee for countries to accede to a widened market. Many studies dealing with the effects of regional free trade agreements on trade flows already exist in the economic literature and the explosion of regional agreements among nations has recently stressed the key role of regionalization. However, the effects of agreements on trade have not yet been clearly determined in those studies. Our research in this paper aims at reassessing the genuine role of associations. For this matter, we particularly study the association of Romania with European Union countries. Our econometric analysis based on qualitative choice models highlights in particular why European countries chose to conclude an association agreement with Romania, and stresses the fact that European Union countries select endogenously the conclusion of association agreements. We also find a 0.29 positive impact of the association agreement on Romanian export performances.
2007	D14	CV: Montgomerie, Johnna. 2007. "The Logic of Neo-liberalism and the Political Economy of Consumer Debt-Led Growth." In <i>Neo-liberalism, State Power and Global Governance</i> , ed. Simon Lee and Stephen McBride, 157-72. Dordrecht: Springer.
2007	F29	Jha, Raghendra, and T. Palanivel. 2007. <i>Resource Augmentation for Meeting the Millennium Development Goals in the Asia Pacific Region</i> . Australian National University, Economics RSPAS, Departmental Working Papers. This paper examines whether the resource positions of the developing countries in the Asia Pacific region and the support they are receiving from donor countries are adequate to ensure that the MDG will be attained by 2015. It begins by examining the extant record of economic growth and emphasises the need for higher economic growth in order to accelerate the pace of poverty reduction. It argues that neither the level of economic growth nor its current structure can ensure that MDG1 is attained by 2015. The paper argues that domestic savings and investment rates in most large developing countries in the Asia Pacific region are not high enough for growth rates to rise high enough to ensure that MDG1 (halving poverty measured at \$1 PPP per capita over the period 1990-2015) is attained. Further, the ICOR in most of these countries has been stagnant or rising in many of these countries so that it would be unrealistic to expect sharp enough rises in the productivity of capital to ensure that existing investment rates can ensure that MDG1 is attained by 2015. The paper then examines some of the reasons for this lacklustre performance. Tax revenues have been stagnant and public expenditures on education and health have been low whereas many developing countries in the Asia Pacific region bear substantial burdens of debt servicing. Many of these countries also face considerable capital flight, exacerbating already tentative external situations. Furthermore whereas the current outlook for FDI looks promising for some Asian countries, international aid has been stagnant and in, many cases, net financial flows into developing countries has been negative. The paper then considers avenues for increasing the resource base for these countries. It considers a variety of measures including tax reform and expenditure switching policies. It advances policies to reduce capital flight and argues that international debt reduction should accompany any policy to increase international aid to the developing countries of the Asia Pacific region. It lists a number of additional sources of multilateral aid that could replenish developing country resources but argues that measures to increase the absorptive capacity of developing countries as well as reduction in the volatility of aid must accompany to increase international aid. Further, increases in international aid should ensure that the real exchange rates of the recipient countries should not rise. If the real exchange rates were to rise, some of these countries could be exposed to Dutch disease type of phenomena.
2007	F30	Wagner, Wolf. 2007. "International Risk Sharing and Government Moral Hazard." <i>Open Economies Review</i> , 18(5): 577-98. This paper analyzes incentive problems caused by international risk sharing. They arise because international risk sharing contributes to the insurance of domestic consumption and thus lowers governments' incentives to increase output. We show that the resulting distortions can lead to substantial efficiency losses. Complete risk sharing is, therefore, undesirable and the optimal degree of risk sharing may be low. Furthermore, we show that households' risk sharing decisions are socially inefficient and are effectively maximizing government moral hazard. As a result, financial innovation and integration may reduce welfare by increasing households' risk sharing opportunities.
2007	G14	Kuttner, Kenneth N., and Adam S. Posen. 2007. <i>Do Markets Care Who Chairs the Central Bank?</i> . National Bureau of Economic Research, Inc, NBER Working Papers: 13101. This paper assesses the effects of central bank governor appointments on financial market expectations of monetary policy. To measure these effects, we assemble a new dataset of appointment announcements from 15 countries, and conduct an event study analysis on exchange rates, bond yields, and stock prices. The analysis reveals a significant reaction of exchange rates and bond yields to unexpected appointments. The reactions are not unidirectional, and thus do not suggest new governors suffer from a generic credibility problem. Federal Reserve chairman appointments stand out in terms of their unusually pronounced effects on financial markets.
2007	G18	CV: Eatwell, John. 2007. "Risk Management and Systemic Risk." In <i>Transition and Beyond: Essays in Honor of Mario Nuti</i> , ed. Saul Estrin, Grzegorz W. Kolodko and Milica Uvalic, 247-62. Studies in Economic Transition. Houndmills, U.K. and New York: Palgrave Macmillan.
2007	G18	Lorenzoni, Guido. 2007. <i>Inefficient Credit Booms</i> . National Bureau of Economic Research, Inc, NBER Working Papers: 13639. This paper studies the welfare properties of competitive equilibria in an economy with financial frictions hit by aggregate shocks.

Year	DE	Title and Abstract
		In particular, it shows that competitive financial contracts can result in excessive borrowing ex ante and excessive volatility ex post. Even though, from a first-best perspective the equilibrium always displays under-borrowing, from a second-best point of view excessive borrowing can arise. The inefficiency is due to the combination of limited commitment in financial contracts and the fact that asset prices are determined in a spot market. This generates a pecuniary externality that is not internalized in private contracts. The model provides a framework to evaluate preventive policies which can be used during a credit boom to reduce the expected costs of a financial crisis.
2007	H22	Nicodeme, Gaetan. 2007. <i>Do Large Companies Have Lower Effective Corporate Tax Rates? A European Survey</i>. Universite Libre de Bruxelles, Solvay Business School, Centre Emile Bernheim (CEB), Working Papers CEB: 07-001.RS. The current debate in corporate taxation is focusing on leveling the tax playing field within the European Union for companies operating across-countries. However, tax burdens could also vary with the size of companies within the same country, raising the question whether large companies pay their share of the burden. This paper uses firm-level data for 21 European countries between 1992 and 2004. The paper finds a robust negative correlation between the number of employees and the effective tax burden of companies. This result tends to validate theories arguing that large companies may enjoy a lower tax burden. As a caveat, using total assets as size variable produces a positive relationship. This relationship is however less robust and less economically significant.
2007	H22	Boyce, James K. 2007. <i>Public finance, aid and post-conflict recovery</i>. University of Massachusetts Amherst, Department of Economics, Working Papers. In the wake of violent conflict, a key element of building a durable peace is building a state with the ability to collect and manage public resources. To implement peace accords and provide public services, the government must be able to collect revenue, allocate resources, and manage expenditure in a manner that is regarded by its citizens as effective and equitable. This paper addresses eight key issues related to this challenge. The first four pertain to resource mobilization: (i) How should distributional impacts enter into revenue policies? (ii) How can postwar external assistance do more to prime the pump of domestic revenue capacity? (iii) Should macroeconomic strictures prescribed for economic stabilization be relaxed to foster political stabilization? (iv) How should the benefits of external resources be weighed against their costs? The second four issues relate to the expenditure side of public finance: (i) How should the dynamics of conflict be factored into public spending policies? (ii) Can the pathologies of a 'dual public sector' - one funded and managed by the government, the other by the aid donors - be surmounted by channeling external resources through the government, with dual-control oversight mechanisms to reduce corruption? (iii) How should long-term fiscal sustainability enter into short-term expenditure decisions? (iv) Lastly, is there scope for more innovative solutions to postwar legacies of external debts?

2007	J18	Afonso, Alexandre. 2007. "Policy Change and the Politics of Expertise: Economic Ideas and Immigration Control Reforms in Switzerland." <i>Swiss Political Science Review</i>, 13(1): 1-38. This article analyses the varying influence across time of the "epistemic community" of free-market economists on immigration policy making in Switzerland. To this end, a framework for the analysis of the impact of economic expertise is provided, and then used in an historical analysis comparing the 1960s with the 1990s. Whereas this influence can be considered to have been weak in the 1960s, it gained significantly in importance in the 1990s, when a period of economic unrest seriously challenged previous immigration policies. It is argued that economic experts played an important role in framing the reforms undertaken during this latter period, notably by providing a "credible causal story" about the links between the existing immigration policy and the social problems which arose in the country in the 1990s. As compared to the 1960s, economic expertise in the 1990s enjoyed more credibility, more political support and took full advantage of a more uncertain social and economic context.

2007	P25 R31	Jin, Bei. 2007. "Macroeconomic Regulation Not the Answer to Rocketing Housing Prices." <i>China Economist</i>, 0(11): 12-17. Resident income inequality has widened drastically within a short timeframe in the process of transition. From a static point of view, there is a combination of three factors underpinning the widening of the resident income gap. Such factors include a) the variation in quantity of factors of production accumulated during the planned economy era; b) the difference between localities in respect of starting points at different historical stages along their varying paths of evolution; c) the illegal and abnormal income stemming from institutional loopholes and policy deficiencies. From a dynamic point of view, there are three root causes underlying resident income gap expansion. Firstly, the privileged group has been continuing to benefit from an increasingly large share of institutional transition returns by exerting influence over the path of evolution; secondly, the underprivileged group has lost their ability to capture income on a sustainable basis due to the lack of a mechanism to express their interests; thirdly, public policies are not designed or enforced well enough to regulate income inequality. Given the significant effects of excess income disparity on economic performance and social stability, it is thus imperative to hold the income gap in check in light of the societal reality of the transitional stage.
2007	Q52	Gander, James P. 2007. "The Micro-Macro Policy Game under Uncertainty and Risk Attitude." <i>Journal of Economics and Business</i>, 59(1): 1-13. A two-firm oligopoly model under uncertainty and risk attitude is developed to explore the effect of asymmetric and symmetric probability responses by the firms to a change in their perception of their business climate, as a result of a change in government policy. A change in the Environmental Protection Agency's clean air policy is used as an example. The focus is on oligopoly vendor firms supplying clean air equipment. The analysis is in the context of game theory. The government's goal is to increase net social welfare by a given policy change. It is shown among other results that the likelihood of a positive response on the part of the firms will depend essentially on the degree of oligopoly interaction (or competition). Also, since the government lacks ex ante knowledge about how firms will perceive a policy change, it is shown that it may be difficult for the government to act as an ex ante optimizer in the usual way. The conclusion contains suggestions on information sharing and industry concentration, among others.

2008	C14 C31	Mishra, Tapas, Adusei Jumah, and Mamata Parhi. 2008. <i>Age-structured Human Capital and Spatial Total Factor Productivity Dynamics</i> . Institute for Advanced Studies, Economics Series: 226. This paper models total factor productivity (TFP) in space and proposes an empirical model for TFP interdependence across spatial locations. The interdependence is assumed to occur due to age-structured human capital dynamics. A semi-parametric spatial vector autoregressive framework is suggested for modeling spatial TFP dynamics where the role of demographic state and technological change are explicitly incorporated in the model to influence their spatial TFP co-movements. Empirical scrutiny in case of Asian countries suggests that cross-country human capital differences in their accumulation and appropriation pattern significantly influenced TFP volatility interdependence. The finding of complementarity in TFP in spatial locations calls for joint policy program for improving aggregate and individual country welfare.

2009	B13	Bastien, Carlos, and Jose Luis Cardoso. 2009. "Uses and Abuses of Political Economy in Portuguese Parliamentary Debates (1850-1910)." <i>History of Economic Ideas</i> , 17(3): 41-57. This article discusses the use made of political economy in Portuguese parliamentary debates throughout the second half of the nineteenth century. This case-study highlights the popularization of political economy in the discussion of economic and financial policies, concerning issues such as the implementation of transport systems, the reform of the fiscal system, the nature of monetary regimes and financial crises, the control of public debt, the emergence of social problems, the allocation of colonial resources or the choice between free trade and protectionist policies. Political economy played an important role, providing persuasive arguments to justify certain policy options. However, the very same arguments also proved themselves as rhetoric abuses, given the propensity of the members of the Parliament to quote economic writers without a thorough knowledge of their work.
2009	B24 B50 N01	Chowkwanyun, Merlin. 2009. <i>New Critical Perspectives on the U.S. and the Post-WWII Global Economy: Brenner, Harvey, and Pollin</i> . Political Economy Research Institute, University of Massachusetts at Amherst, Working Papers. In the current economic crisis, left and progressive political economics has enjoyed renewed attention and credibility, both inside and outside of academia. In this paper, Merlin Chowkwanyun surveys recent contributions to this literature by Robert Brenner, David Harvey, and Robert Pollin, summarizing key arguments and identifying research questions and heuristics for further inquiry. The author considers how these contributions might help to forge more fruitful dialogue between analyses of social movements and economic structures, too often studied apart. The paper stresses the importance of retaining the robust critical power of the left critique while avoiding the fatalism, sectarianism, and "automatic" theories of social change that have bedeviled the left's recent past.
2009	C90 D64	Bowles, Samuel, and Sandra Polania Reyes. 2009. <i>Economic Incentives and Social Preferences: A Preference-based Lucas Critique of Public Policy</i> . CESifo Group Munich, CESifo Working Paper Series: CESifo Working Paper No. 2734. Policies and explicit private incentives designed for self-regarding individuals sometimes are less effective or even counterproductive when they diminish altruism, ethical norms and other social preferences. Evidence from 51 experimental studies indicates that this crowding out effect is pervasive, and that crowding in also occurs. A model in which self-regarding and social preferences may be either substitutes or complements is developed and evidence for the mechanisms underlying this non-additivity feature of preferences is provided. The result is a preference-based analogue to the Lucas Critique restricting feasible implementation to allocations that are supportable given the effect of incentives on preferences.
2009	D03	Chetty, Raj. 2009. "Sufficient Statistics for Welfare Analysis: A Bridge between Structural and Reduced-Form Methods." <i>Annual Review of Economics</i> , 1(1): 451-87. The debate between structural and reduced-form approaches has generated substantial controversy in applied economics. This article reviews a recent literature in public economics that combines the advantages of reduced-form strategies--transparent and credible identification--with an important advantage of structural models--the ability to make predictions about counterfactual outcomes and welfare. This literature has developed formulas for the welfare consequences of various policies that are functions of reduced-form elasticities rather than structural primitives. I present a general framework that shows how many policy questions can be answered by estimating a small set of sufficient statistics using program-evaluation methods. I use this framework to synthesize the modern literature on taxation, social insurance, and behavioral welfare economics. Finally, I discuss problems in macroeconomics, labor, development, and industrial organization that could be tackled using the sufficient statistic approach.

This paper examines economic policy interactions in the Economic and Monetary Union when the assessment of cyclical conditions in real time is surrounded by uncertainty. On the basis of a simple stylised model it shows that with a Nash-type of interaction different views about the output gap on the side of the policy players--the Council of the European Union, the European Commission, and the European Central Bank--can give rise to excessive

Year	DE	Title and Abstract
		activism with policy players pushing economic variables into opposite directions. It argues that the costs of such policy conflicts can be reduced by agreeing on a common assessment of the cycle, by constraining policy variables, and/or by increasing the weight of fiscally conservative institutions. An alternative option to sidestep policy conflicts ensuing from diverging views of the cycle is to take policy decisions sequentially, as is the case in a Stackelberg-type of interaction. The paper shows that for a given misperception of the cycle, the impact on the policy instruments and on output and inflation are generally smaller in the Stackelberg equilibrium as compared to a Nash outcome. Alternative allocations of roles--that is leader versus follower--are discussed and assessed.

2009	G01	Hodson, Dermot, and Deborah Mabbett. 2009. "UK Economic Policy and the Global Financial Crisis: Paradigm Lost?" <i>Journal of Common Market Studies</i> , 47(5): 1041-61. The global financial crisis of 2007-08 produced a sudden change in the economic policy of the United Kingdom (UK). Prior to the crisis, the government preached the gospel of price stability, fiscal prudence, and light-touch financial regulation. In the wake of the crisis, the government countenanced unconventional monetary policies, a surge in public-sector borrowing and the need for a rethink of financial supervision. This article seeks to understand the significance of these changes using Peter Hall's theory of policy paradigms. Its central argument is that, contrary to appearances, the UK has not yet experienced a fundamental reordering of the instruments, institutions, and aims of economic policy. Third-order change cannot be ruled out as the crisis unfolds but the economic ideas underpinning UK economic policy have, for better or worse, demonstrated remarkable resilience thus far.

2009	G01	Leijonhufvud, Axel. 2009. "Out of the Corridor: Keynes and the Crisis." <i>Cambridge Journal of Economics</i> , 33(4): 741-57. We should learn from Keynes to focus on the macroproblems of our day. Today's problem is the financial crisis and the resulting great recession. Neither the standard Keynesian policies of decades past nor the monetary policy doctrine of recent years provides useful solutions. Dynamic stochastic general equilibrium theory is part of the crisis wreckage, but turning to old or to New Keynesian theory will be of little use. A balance sheet recession requires that policy address the problems in the private sector's capital as well as its income accounts. We need serious theoretical work on problems of system stability using, for example, agent-based methods. Monetary theory needs to develop analysis of processes in which intertemporal budget constraints are violated. Network theory will be useful in that quest.

2009	H68 I10	Baker, Dean, and David Rosnick. 2009. <i>Taming the Deficit: Saving Our Children from Themselves</i> . Center for Economic and Policy Research (CEPR), CEPR Reports and Issue Briefs. Many proponents of conservative fiscal policies talk of the budget deficit as being a matter of intergenerational equality. However, this paper shows the younger generations (and those yet to be born) will contribute more to the deficit than older generations. This analysis uses data from the CBO Long-Term Budget Outlook and the authors' calculations to show that the driving force behind the deficit is our broken health care system and that this should be the focus of the debate.
2009	J44	Berggren, Niclas, Henrik Jordahl, and Charlotta Stern. 2009. "The Political Opinions of Swedish Social Scientists." <i>Finnish Economic Papers</i> , 22(2): 75-88. We study the political opinions of Swedish social scientists in seven disciplines and find indications of a left-right divide, with sociology and gender studies being the most left-leaning disciplines, with business administration, economics, and law being the most right-leaning ones, and with political science and economic history being located somewhere in between. This pattern is found when looking at party preferences, left-right self-identification, and positions on economic policy issues. Overall, there is a slight dominance in sympathies for the right, although there are more academics to the left among those most involved in activities with a potential to influence decision-makers.
2009	J80 J88	Schmitt, John. 2009. <i>Inequality as Policy: The United States Since 1979</i> . Center for Economic and Policy Research (CEPR), CEPR Reports and Issue Briefs. Since the end of the 1970s, the United States has seen a dramatic increase in economic inequality. While the United States has long been among the most unequal of the world's rich economies, the economic and social upheaval that began in the 1970s was a striking departure from the movement toward greater equality that began in the Great Depression, continued through World War II, and was a central feature of the first 30 years of the postwar period. This is not due to chance circumstances but is the direct result of a set of policies designed first and foremost to increase inequality.

2009	N21 N41	Grubb, Farley. 2009. <i>Land Policy: Founding Choices and Outcomes, 1781-1802</i> . National Bureau of Economic Research, Inc. NBER Working Papers: 15028. Victory in the War for Independence brought a vast amount of land within the grasp of the new American nation--territory stretching from the Appalachian Mountains to the Mississippi River between the southern shores of the Great Lakes and Spanish Florida. These lands were initially claimed by several states. Pressure from states without land claims led to these lands being transferred to the national government. The land so transferred was to be used to pay for the revolution. By 1802 this national public domain totaled roughly 220 million acres of saleable land that was worth about \$215 million dollars at constant-dollar long-run equilibrium land prices. A public finance approach is used to explain the choices facing the government regarding how to use its lands to pay for the revolution. The first choice--directly swapping land for war debt--was superseded by the second choice, namely "backing" the national debt with its land assets and pledging future proceeds from land sales to be used by law only to redeem the principal of the national debt and nothing else. This land policy helped stabilize the national government's financial position and put the U.S. on a sound credit footing by the mid-1790s.

2009	O24	Mayer, Jorg. 2009. "Policy Space: What, for What, and Where?" <i>Development Policy Review</i> , 27(4): 373-95. This article examines how developing countries can use, and enlarge, existing policy space, without opting out of international commitments. It argues that: (i) a meaningful context for policy space must extend beyond trade policy and include macroeconomic and exchange-rate policies that will achieve developmental goals more effectively; (ii) policy space depends not only on international rules but also on the impact of international market conditions and policy decisions taken in other countries on the effectiveness of national policy instruments; and (iii) international integration affects policy space through several factors that pull in opposite directions; whether it increases or reduces policy space differs by country and type of integration.
2009	P26	Chepel, S. 2009. "How to Improve the Effectiveness of Economic Policy: An Empirical Analysis of the Role of Government Institutions." <i>Problems of Economic Transition</i> , 52(8): 28-44. The article analyzes the hypothesis of the statistical significance of the institutional factor in the process of increasing the efficiency of economic policy in developing countries. It shows that the expansion of domestic credits to the private sector may bring about contrary results if corruption in the country is higher than the threshold level. The efficiency of anti-inflation policy in many respects depends on the quality of the banking system, and increasing this efficiency requires the strengthening of banking potential and energy saving. The article justifies the priority of institutional development measures over selective measures of government support of separate sectors of economy.

2010	B59 E02	Bibow, Jorg. 2010. <i>A Post Keynesian Perspective on the Rise of Central Bank Independence: A Dubious Success Story in Monetary Economics</i> . Levy Economics Institute, The Economics Working Paper Archive. This paper critically assesses the rise of central bank independence (CBI) as an apparent success story in modern monetary economics. As to the observed rise in CBI since the late 1980s, we single out the role of peculiar German traditions in spreading CBI across continental Europe, while its global spread may be largely attributable to the rise of neoliberalism. As to the empirical evidence alleged to support CBI, we are struck by the nonexistence of any compelling evidence for such a case. The theoretical support for CBI ostensibly provided by modeling exercises on the so-called time-inconsistency problem in monetary policy is found equally wanting. Ironically, New Classical modelers promoting the idea of maximum CBI unwittingly reinstalled a (New Classical) "benevolent dictator" fiction in disguise. Post Keynesian critiques of CBI focus on the money neutrality postulate as well as potential conflicts between CBI and fundamental democratic values. John Maynard Keynes's own contributions on the issue of CBI are found worth revisiting.
2010	C01	Ali Abbas, S. M., Jacques Bouhga-Hagbe, Antonio Fatas, Paolo Mauro, and Ricardo C. Velloso. 2010. <i>Fiscal Policy and the Current Account</i> . C.E.P.R. Discussion Papers, CEPR Discussion Papers: 7859. This paper examines the relationship between fiscal policy and the current account, drawing on a larger country sample than in previous studies and using panel regressions, vector auto-regressions, and an analysis of large fiscal and external adjustments. On average, a strengthening in the fiscal balance by 1 percentage point of GDP is associated with a current account improvement of 0.2-0.3 percentage point of GDP. This association is as strong in emerging and low-income countries as it is in advanced economies; and significantly higher when output is above potential.
2010	C54	Mehrhoff, Jens. 2010. "Ajuste estacional en tiempos de cambios economicos fuertes. (Seasonal Adjustment in Times of Strong Economic Changes. With English summary)." <i>Ensayos Economicos</i> , 0(59): 7-23. The present paper refers to the ESS Guidelines on Seasonal Adjustment and gives an example of how to use them in times of crisis. Taking as a basis the example of Argentine currency in circulation, a comparison is made between revisions from readjusting data every time a new figure is released (partial concurrent adjustment--with and without outlier modeling) and adjusting data with forecast seasonal/calendar factors (controlled current adjustment). Unlike the recent financial and economic crisis, this example comprises sufficient data to explore the crisis from an ex post view. If strong economic changes are treated adequately, i.e., either by introducing outlier variables or using forecast seasonal/calendar factors, revisions can be kept low, and both methods will give similar results. By contrast, if outliers are not specified, it will be wrongly assumed that the effects of the crisis (partially) recur year after year. This would limit the quality of the estimates of seasonal and calendar factors and result in probably misleading outcomes of the partial concurrent adjustment approach. As the conditions for seasonality remain valid during the crisis, seasonal adjustment is justified in order to facilitate the uncovering of "news" in economic developments during this period.
2010	C93	Stoker, Gerry. 2010. "Translating Experiments into Policy." <i>Annals of the American Academy of Political and Social Science</i> , 628(0): 47-58. It is in their potential policy relevance that experiments may make their strongest contribution to innovation and progress in political science. Yet there are good grounds for thinking that the policy world has in place a number of barriers that can limit the impact of experimental evidence. Moreover, some experimenters seem to approach the business of influencing policy with spectacular naivety. In modern democratic societies, engaging with the policy process is a complex and demanding activity. In order to make advances in this quarter, experimenters will need to develop their methods and practices in field experiments and extend their strategies to deal with the demands of a complex policy world.
2010	D04	Organisation for Economic Co-operation and Development. 2010. <i>Making Reform Happen: Lessons from OECD Countries</i> . Paris and Washington, D.C.: Organisation for Economic Co-operation and Development. Presents a selection of the findings collected from the OECD's ongoing "Making Reform Happen" project, focusing on how past reform experience may be of use of use to policymakers seeking to design, adopt, and implement new reforms. Discusses reform beyond the crisis; opening markets to competition; advancing pension and labor market reforms; making fundamental tax reform happen; making reform happen in environmental policy; making reform happen in education; effective ways to realize policy reforms in health systems; modernizing government; enabling regulatory reform; and achieving and sustaining fiscal consolidation.

2010	D04	Riccaboni, Massimo, Sandro Trento, and Enrico Zaninotto. 2010. "L'illusione del controllo nelle politiche pubbliche. (The Illusion of Control in Public Policies. With English summary.)." <i>Stato e Mercato</i> , 0(88): 113-47. It is quite common that public policies take as benchmark mean values of relevant policy variables (average firm size, average productivity, average income, etc.). In such a case, the policy maker introduces incentives that should change individual behaviour in order to increase average values of the policy relevant variables. When this kind of policies are unsuccessful it is thought that the incentives are badly designed so that the entire problem is considered a problem of "mechanism design". In this paper, the authors maintain that policy makers should always take into account that incentives have an impact not only on individual behaviour but also on the distribution and law of motion of the aggregate phenomena that may be different from the sum of micro behaviours. Three different cases of proportional growth phenomena (firm's size growth, income distribution, and research production) are analyzed, in the paper, through simulations. Some tentative general principles for public policies are identified.

2010	E69	Nersisyan, Yeva, and L. Randall Wray. 2010. Does Excessive Sovereign Debt Really Hurt Growth? A Critique of This Time Is Different, by Reinhart and Rogoff. Levy Economics Institute, The, Economics Working Paper Archive. The worst global downturn since the Great Depression has caused ballooning budget deficits in most nations, as tax revenues collapse and governments bail out financial institutions and attempt countercyclical fiscal policy. With notable exceptions, most economists accept the desirability of expansion of deficits over the short term but fear possible long-term effects. There are a number of theoretical arguments that lead to the conclusion that higher government debt ratios might depress growth. There are other arguments related to more immediate effects of debt on inflation and national solvency. Research conducted by Carmen Reinhart and Kenneth Rogoff is frequently cited to demonstrate the negative impacts of public debt on economic growth and financial stability. In this paper we critically examine their work. We distinguish between a nation that operates with its own floating exchange rate and nonconvertible (sovereign) currency, and a nation that does not. We argue that Reinhart and Rogoff's results are not relevant to the case of the United States.
2010	F10	Weisbrot, Mark, and Rebecca Ray. 2010. Update on the Venezuelan Economy. Center for Economic and Policy Research (CEPR), CEPR Reports and Issue Briefs. This paper examines recent economic data, including the most recent data released the third week of August 2010, in an attempt to evaluate the Venezuelan economy's prospects in the foreseeable future. It finds that the Venezuelan economy, which went into recession in the first quarter of 2009 after six years of record economic growth, is now most likely in recovery, and that the 2009 recession has probably ended. This is based on seasonally adjusted quarterly data, which show that the Venezuelan economy grew by an estimated 5.2 percent in the second quarter of 2010, on an annualized basis. The paper then considers possibilities and arguments that the Venezuelan economy will remain mired in recession or stagnation, and/or is doomed to long term decline. It finds that although there are a number of analysts who are predicting that the Venezuelan economy is on the verge of inevitable (and long-anticipated) ruin, there is nothing in the recent data--or that of the last decade--to indicate that this is true.
2010	G12	Melino, Angelo. 2010. "Measuring the Cost of Economic Fluctuations with Preferences That Rationalize the Equity Premium." <i>Canadian Journal of Economics</i> , 43(2): 405-22. Lucas (2003) argues that the potential welfare gains from stabilizing the business cycle are small. In fact, he shows that the benefits of eliminating all economic fluctuations are small, especially when compared with the potential gains from other reforms. His estimates are obtained using standard preferences. I show that a model consistent with observed data on asset returns leads to very different conclusions. Calibrating preferences to observed asset market data raises the estimated welfare gains from completely eliminating aggregate fluctuations by approximately two orders of magnitude. Most of the gains, however, come from the elimination of low-frequency contributions.
2010	G12	Darracq Paries, Matthieu, and Alexis Loublrier. 2010. Epstein-Zin preferences and their use in macro-finance models: implications for optimal monetary policy. European Central Bank, Working Paper Series: 1209. Epstein-Zin preferences have attracted significant attention within the macro-finance literature based on DSGE models as they allow to substantially increase risk aversion, and consequently generate non-trivial risk premia, without compromising the ability of standard models to achieve satisfactory macroeconomic data coherence. Such appealing features certainly hold for structural modelling frameworks where monetary policy is set according to Taylor-type rules or seeks to minimize an ad hoc loss function under commitment. However, Epstein-Zin preferences may have significant quantitative implications for both asset pricing and macroeconomic allocation under a welfare-based monetary policy conduct. Against this background, the paper focuses on the impact of such preferences on the Ramsey approach to monetary policy within a medium-scale model based on Smets and Wouters (2007) including a wide range of nominal and real frictions that have proven to be relevant for quantitative business cycle analysis. After setting an empirical benchmark that generates a mean value of 100 bp for the ten-year term premium, we show that Epstein-Zin preferences significantly affect the macroeconomic outcome when optimal policy is considered. The level and the dynamic pattern of risk premia are also markedly altered. We show that the effect of Epstein-Zin preferences is extremely sensitive to the presence of real rigidities in the form of quasi-kinked demands. We also analyse how this effect can be linked to a combined effect of capital accumulation and wage rigidities.
2010	I20	Dearden, Lorraine. 2010. "Administrative Data and Economic Policy Evaluation." <i>Economic Record</i> , 86(0): 18-21. This article looks at the strengths and weaknesses of using administrative data for economic policy evaluation. It does this by looking at how school administrative data have been used to assess school effectiveness and the impact of month of birth on educational outcomes with varying degrees of success. It concludes that if there is some natural experiment in the way that education is delivered or an education initiative is introduced, then schools' administrative data offer the opportunity of answering questions of extreme policy interest in a robust way--even without rich background information on the students and their families.
2010	O53	Felipe, Jesus. 2010. Asia and the Global Crisis: Recovery Prospects and the Future. Levy Economics Institute, The, Economics Working Paper Archive. The global crisis of 2007-09 affected developing Asia largely through a decline in exports to the developed countries and a slowdown in remittances. This happened very quickly, and by 2009 there were already signs of recovery (except on the employment front). This recovery was led by China's impressive performance, aided by a large stimulus package and easy credit. But China needs to make efforts toward rebalancing its economy. Although private consumption has increased at a fast pace during the last decades, investment has done so at an even faster pace, with the consequence that the share of consumption in total output is very low. The risk is that the country may fall into an underconsumption crisis. Looking at the medium and long term, developing Asia's future is mixed. There is one group of countries with a highly diversified export basket.

Year	DE	Title and Abstract
		These countries have an excellent opportunity to thrive if the right policies are implemented. However, there is another group of countries that relies heavily on natural resources. These countries face a serious challenge, since they must diversify.

2010	Q40	Polasky, Stephen, Aart de Zeeuw, and Florian Wagener. 2010. <i>Optimal Management with Potential Regime Shifts</i> . CESifo Group Munich, CESifo Working Paper Series: 3237 . We analyze how the threat of a potential future regime shift affects optimal management. We use a simple general growth model to analyze four cases that involve combinations of stock collapse versus changes in system dynamics, and exogenous versus endogenous probabilities of regime shift. Prior work in economics has focused on stock collapse with endogenous probabilities and reaches ambiguous conclusions on whether the potential for regime shift will increase or decrease intensity of resource use and level of resource stock. We show that all other cases yield unambiguous results. In particular, with endogenous probability of regime shift that affects system dynamics the potential for regime shift causes optimal management to become precautionary in the sense of maintaining higher resource stock levels.
2010	Q54	Przyluski, Valentin, and Stephane Hallegatte. 2010. <i>Climate Change Adaptation, Development, and International Financial Support: Lessons from EU Pre-Accession and Solidarity Funds</i> . Fondazione Eni Enrico Mattei, Working Papers: 2010.137 . Funding adaptation requires adequate governance and there are different ways to organise and channel the funds to where it is most efficient and most necessary. This paper investigates this issue and studies the practical implementation of a development under conditionality, namely adaptation-development, and its requirement in terms of financing architecture. To contribute to this research, it looks at similar problems that have been met in the past, namely the European funding programs for Eastern Europe countries that were candidates to accession, and European internal structural and cohesion funds. These funding examples provide a pertinent analogy for the adaptation problem, and most issues in adaptation finance have also been met in these funds (difficulty to define and measure additionality and incremental cost, concept fuzziness, need for leverage and mainstreaming, ownership and sovereignty issues). Publicly available documents from the European Commission and the European Court of Auditors are reviewed, providing interesting insights into possible implementation of adaptation finance. These insights can be summarized into seven main lessons: (1) "black-spot" programs are less flexible but more efficient than "concept-based" programs; (2) a multi-scale and multi-step approach can minimize sovereignty and ownership issue, and facilitate capacity building; (3) private funding leverage is a myth, and funding based on the "additional cost" is highly inefficient; (4) non substitutability among objectives and regions is necessary; (5) sub-national eligibility criteria are a viable solution; (6) institutional capacity matter: low-capacity countries should focus on capacity building and "black-spot" strategies; higher-capacity countries can follow a concept-based approach; and (7) the EU should use its own experience to promote its views of adaptation funds.
2011		
2011	A32 F44	Miron, Jeffrey, ed. 2011. <i>Cato Papers on Public Policy. Volume I</i> , Washington, D.C.: Cato Institute . Four papers and seven comments present an evaluation of significant economic and social policies using the techniques of modern economics. Papers discuss whether the Treasury can exempt its own companies from tax--the \$45 billion GM NOL carryforward (J. Mark Ramseyer and Eric B. Rasmusen); free to punish--the American Dream and the harsh treatment of criminals (Rafael Di Tella and Juan Dubra); competition and innovation (Michele Boldrin, Juan Correa Allamand, David K. Levine, and Carmine Ornaghi); and labor market dysfunction during the Great Recession (Kyle F. Herkenhoff and Lee E. Ohanian).
2011	D30	Vejlin, Rune. 2011. <i>Optimal Unemployment Insurance: How Important is the Demand Side?</i> . School of Economics and Management, University of Aarhus, Economics Working Papers . I develop and simulate an equilibrium model of search with endogenous savings and search intensity. The wage offer distribution is endogenized by firms making vacancy and entry choices. This allows me to conduct a counterfactual analysis of the optimal unemployment insurance (UI) level. The provision of UI is motivated by the worker's inability to perfectly insure against income shocks, but at the same time UI introduces a distortion to the level of search intensity of the worker and vacancy intensity of firms. I find that equilibrium effects are important to take into account. Making policy from a partial model can introduce large welfare losses. It is also shown that different kinds of taxes have different implications on welfare.
2011	E26 H26	Cuff, Katherine, Nicolas Marceau, Steeve Mongrain, and Joanne Roberts. 2011. "Optimal Policies with an Informal Sector." <i>Journal of Public Economics</i> , 95(11-12): 1280-91. This paper characterizes optimal policies in the presence of tax evasion and undocumented workers. In equilibrium, domestic workers may work exclusively in the formal sector or also in the informal sector. Surprisingly, in equilibrium, wages are always equalized between domestic and undocumented workers, even if they do not work in the same sectors of the economy. This is driven by the interaction of firm level decisions with optimal government policy. We also find that enforcement may not always be decreasing in its cost, and that governments will optimally enforce labour market segmentation if enforcement costs are not too high.

Year	DE	Title and Abstract
		fiscal policy outcomes. An increase in asset prices affects in a positive and significant manner primary balances, with the response reflecting both an increase in government revenues and a fall in government spending. The most important impact on fiscal balances is due to changes in residential property prices. Changes in equity and commercial property prices are also important determinants of fiscal balances. Our findings suggest that the steepening of the slope of the yield curve contributes to expenditure based fiscal discipline.
2011	H71	Herd, Richard, Sam Hill, and Vincent Koen. 2011. <i>Fiscal Prospects and Reforms in India</i>. OECD Publishing, OECD Economics Department Working Papers: 911. Substantial fiscal consolidation was achieved under the aegis of the 2003 Fiscal Responsibility and Budget Management Act. While deficits widened anew in 2008 and 2009, against the backdrop of the global financial and economic crisis, efforts to reduce them have resumed since. To ensure continued progress, as well as stronger government finances in the longer term, the medium-term fiscal framework needs to be improved, notably by embedding the annual budget in a detailed three-year rolling programme. Expenditure needs to be controlled better, in particular as regards subsidies, which the central government has indeed been trying to rein in, though with difficulty in the face of rising world oil prices. Expenditure also needs to become more effective, in particular in the areas of health care, education and social assistance. On the revenue side, tax reforms have been tabled, both for direct taxes and for the complex and inefficient system of indirect taxes. Corporate income tax rates are being cut, though the headline rate remains high. Lower taxation for large special economic zones deserves to be maintained for some time. For the personal income tax, which only a fairly small proportion of the population pays, thresholds are set to be raised considerably. A goods and services tax is to be introduced, which should help reduce the segmentation of the national market for goods and services. Customs duties have been reduced on average but remain high for some categories of imports, implying scope for further reduction over time.
2011	O31	Boavida, Nuno. 2011. <i>How composite indicators of innovation can influence technology policy decision?</i>. Universidade Nova de Lisboa, IET-Research Center on Enterprise and Work Innovation, Faculty of Science and Technology, IET Working Papers Series: 03/2011. This working paper is based on the development of the Thesis Plan presented for the Units Project II and Project III at the 1st Winter School of PhD programme on Technology Assessment at FCT/UNL. It focuses the methodology analysis and includes empirical information elements, in order to understand how composite indicators of innovation can influence technology policy decisions. In order to test the hypotheses raised in the Thesis Plan, two separate phases were designed. On the first part, the work tests hypotheses 1 and partially 2, identifying the quality, depth and limitations of three famous complex indicator-based systems, namely the Science, Technology and Industry Scoreboard, the European Innovation Scoreboard 2008 and Innovation Union Scoreboard 2010. On the second phase, the remaining hypotheses are tested adding media databases analysis, which will provide complementary information to a set of interviews to policy makers, in order to understand the role of the composite indicators on technology decisions.
2011	O43	Anderlini, Luca, Leonardo Felli, Giovanni Immordino, and Alessandro Riboni. 2011. <i>Legal Institutions, Innovation and Growth</i>. CESifo Group Munich, CESifo Working Paper Series: 3489. We analyze the relationship between legal institutions, innovation and growth. We compare a rigid (law set ex-ante) legal system and a flexible one (law set after observing current technology). The flexible system dominates in terms of welfare, amount of innovation and output growth at intermediate stages of technological development--periods when legal change is needed. The rigid system is preferable at early stages of technological development, when (lack of) commitment problems are severe. For mature technologies the two legal systems are equivalent. We find that rigid legal systems may induce excessive (greater than first-best) R&D investment and output growth.
2011	R15	Dawid, Herbert, and Michael Neugart. 2011. "Agent-Based Models for Economic Policy Design." <i>Eastern Economic Journal</i>, 37(1): 44-50. Agent-based simulation models are used by an increasing number of scholars as a tool for providing evaluations of economic policy measures and policy recommendations in complex environments. On the basis of recent work in this area we discuss the advantages of agent-based modeling for economic policy design and identify further needs to be addressed for strengthening this methodological approach as a basis for sound policy advice.
2012		
2012	C44 D44	Aryal, Gaurab, and Dong-Hyuk Kim. 2012. <i>A Point Decision For Partially Identified Auction Models</i>. Australian National University, College of Business and Economics, School of Economics, ANUCBE School of Economics Working Papers. This paper proposes a decision theoretic method to choose a single reserve price for partially identified auction models, such as Haile and Tamer, 2003, using data on transaction prices from English auctions. The paper employs Gilboa and Schmeidler, 1989 for inference that is robust with respect to the prior over unidentified parameters. It is optimal to interpret the transaction price as the highest value, and maximize the posterior mean of the seller's revenue. The Monte Carlo study shows substantial gains relative to the average revenues of the Haile and Tamer interval.
2012	D51	Blake, Andrew P., and Tatiana Kirsanova. 2012. "Discretionary Policy and Multiple Equilibria in LQ RE Models." <i>Review of Economic Studies</i>, 79(4): 1309-39. We study stationary discretionary equilibria in dynamic linear-quadratic rational expectations models. Past papers have assumed that this is uniquely determined; we show that such models can have multiple equilibria in some situations. We demonstrate the existence of multiple discretionary equilibria using a number of examples of increasing complexity and discuss their potential to explain interesting economic phenomena. We investigate the general properties of discretionary equilibria and discuss the design implications for the numerical algorithms needed to find them.
2012	G11 G23	Sum, Vichet, and Kate Brown. 2012. "Real Estate Sector Response to Economic Policy Uncertainty Shocks." <i>International Research Journal of Applied Finance</i>, 3(12): 1739-47. This paper examines the effect of economic policy uncertainty on the performance of the real estate sector proxied by Real Estate Investment Trust (REIT) returns in the United States. Using monthly REIT index data and the monthly changes in a newly constructed index of economic policy uncertainty (DEPU) in the United States spanning 1985-2011, we investigate the impulse response functions of the REIT returns to the changes in economic policy uncertainty using a vector auto regression (VAR) analysis. The Granger-causality test is also performed to determine if economic policy uncertainty causes the fluctuations in REIT returns. The relationship is weaker for mortgage investments than the total index. When mediated by the CRSP Value Weighted Stock Returns, the relationship between REIT returns and the DEPU becomes insignificant.
2012	H80	Barnes, Sebastian, David Davidsson, and Lukasz Rawdanowicz. 2012. <i>Europe's New Fiscal Rules</i>. OECD Publishing, OECD Economics Department Working Papers: 972. Europe is putting in place a new system of fiscal rules following the euro area sovereign debt crisis and decades of rising government to debt-to-GDP ratios. These include the so-called "six pack" to upgrade the Stability and Growth Pact to a new Treaty incorporating the "fiscal compact". Much of the discussion about the new rules has been procedural or theoretical. This paper shows what the rules will mean in practice under a realistic medium term scenario developed by the OECD. In the short term, fiscal consolidation will largely be driven by the current wave of Excessive Deficit

Year	DE	Title and Abstract
		Procedures. Only once these commitments are fulfilled will the new system of rules come into action. Although the rules are complex, the central pillar of the new fiscal rules will be the requirement to balance budgets in structural terms. These imply a tight fiscal stance over the coming years for many European countries by comparison with the performance achieved in past decades: almost all countries will have to be as disciplined as the few countries that managed to make meaningful progress in tackling high debt levels in the past. A further tightening of budgetary Medium-Term Objectives is likely in 2012, which will in many cases make the required fiscal stance even tighter. Over the very long term, the rules imply very low levels of debt. The requirements can thus not be considered to be a permanent approach. The methodology to calculate the structural balance has a number of weaknesses and discretion will be needed in implementing the rules.
2012	J48	Tcherneva, Pavlina R. 2012. <i>Reorienting Fiscal Policy after the Great Recession</i>. Levy Economics Institute, The, Economics Working Paper Archive. The paper evaluates the fiscal policy initiatives during the Great Recession in the United States. It argues that, although the nonconventional fiscal policies targeted at the financial sector dwarfed the conventional countercyclical stabilization efforts directed toward the real sector, the relatively disappointing impact on employment was a result of misdirected funding priorities combined with an exclusive and ill-advised focus on the output gap rather than on the employment gap. The paper argues further that conventional pump-priming policies are incapable of closing this employment gap. In order to tackle the formidable labor market challenges observed in the United States over the last few decades, policy could benefit from a fundamental reorientation away from trickle-down Keynesianism and toward what is termed here a "bottom-up approach" to fiscal policy. This approach also reconsiders the nature of countercyclical government stabilizers.
2012	L21 L25	Lindic, Jaka, Mojca Bavdaz, and Helena Kovacic. 2012. "Higher Growth through the Blue Ocean Strategy: Implications for Economic Policy." <i>Research Policy</i>, 41(5): 928-38. Higher growth is a key goal of companies, governments, and societies. Economic policies often attempt to attain this goal by targeting companies of certain sizes that operate in specific industries and focus on a specific business activity. This approach to policy making has considerable shortcomings and seems to be less than fully effective in increasing economic growth. We suggest a new approach to policy making that stems directly from the entrepreneurial perspective. This approach examines a successful business strategy framework--the Blue Ocean Strategy--to discover conditions for high growth. We test the propositions on empirical data for two cases of successful high-growth business, namely Slovenian gazelles and Amazon.com. The results reveal a gap between the macro level of economic policy making to achieve higher growth and the micro level of business growth. The findings call for a change in the focus of economic policies on specific size companies, industries, and business activities to intraindustry cooperation, collaboration between companies of different sizes, value innovation, and creation of uncontested markets.

2012	N20	Adam, Christopher, Paola Subacchi, and David Vines. 2012. "International Macroeconomic Policy Coordination: An Overview." <i>Oxford Review of Economic Policy</i>, 28(3): 395-410. This article, which serves as an introduction to the Oxford Review of Economic Policy's issue on 'Macroeconomic Policy Coordination: Global Imbalances and Global Growth', charts the evolution of international macroeconomic policy coordination from the end of the Second World War until the present day. The arrangements laid out at the Bretton Woods Conference in 1944 provide an intellectual framework with which to assess the evolving need for and feasibility of international coordination across three historical periods: the 'fixed-but-adjustable' exchange-rate arrangements of the Bretton Woods system; the subsequent flexible exchanges period of the 'non-system' which led into the Great Moderation; and finally the period since the global financial crisis of 2008. Increased economic integration, particularly through the capital account, combined with asymmetries in exchange-rate regimes between China and the US, have shown that reliance on the automatic adjustment mechanisms of the non-system are no longer feasible, so that a return to policy cooperation is necessary in order to rebalance the world economy and reduce the adverse spill-over impacts that uncoordinated rebalancing would entail. The article explores the nature of this coordination and provides a context for other contributions to the issue, analysing positive and normative aspects of macroeconomic policy coordination from a global perspective and from the prospective of key global players including China and the European Union.
2012	N47	Peet, J. Richard. 2012. "Comparative Policy Analysis: Neoliberalising New Zealand." <i>New Zealand Geographer</i>, 68(3): 151-67. Comparative policy analysis involves systematically examining the long-term formation of public policies across a number of societies. It focuses particularly on the sequence of policy regimes: liberalism-Keynesianism/social democracy -neoliberalism. Since 1980, neoliberalism has been widely adopted as the guiding ideological structure for economic policy making. But neoliberalism encounters resistances that vary with national contexts. New Zealand is a particularly interesting case because of its reputation as a social democratic, welfare state that went neoliberal with a vengeance (Rogernomics).
2012	N94	Shelburne, Robert. 2012. <i>Restoring Stability to Europe</i>. UNECE, ECE Discussion Papers Series: 2012_3. The eurozone is in political and economic crisis. This is due to the inadequate design of the institutional structure of the eurozone and to the current poor implementation of macroeconomic policy. In designing the eurozone, well established principles of economics were ignored and major decisions were based primarily upon political considerations. Thus it was only a matter of time before these defects would become apparent. In addressing the current crisis that has developed policy makers have misdiagnosed the causes of the crisis and implemented solutions that are largely counterproductive to solving it. This paper describes the underlying factors that led to the inadequate design and improper macroeconomic response and explains what will be necessary in order to create an institutional structure and macroeconomic policy framework that can restore economic stability and growth to the region.
2012	O25	Monga, Celestin. 2012. "Shifting Gears: Igniting Structural Transformation in Africa." <i>Journal of African Economies</i>, 21(0): ii19-54. Rarely has a country evolved from a low- to a high-income status without sustained structural transformation from agrarian or resource-based towards an industry- or services-based economy. Yet few African countries have been successful in this transformation. This raises many questions: within agriculture, services, or industry, how does the process of moving into higher quality goods and services happen; within firms, why are some able to move into export markets and start producing new goods, while others languish; how do economies move up the value chain; what determines a country's ability to create jobs; and what is the appropriate role for governments and markets in the growth dynamics? This paper summarises the intellectual progress achieved through several major waves of growth research and highlights the remaining challenges of understanding structural change. It then provides some empirical evidence of the limited structural transformation that has taken place in Africa since independence, and suggests a blueprint to help policymakers in Africa and elsewhere address them.

Year	DE	Title and Abstract
		economy in 2009 and an assessment of the current state of China's economy and the state of its development. Papers discuss China's macroeconomic report for 2010 (Yuanchun Liu, Yan Yan, and Rong Zhu); China's core inflation estimate from a perspective of forecast-taking inertia as weight (Zhiyong Fan and Penglong Zhang); redoubling residents' income and China's economic growth (Tianyu Yang); unemployment hysteresis, asymmetric employment flexibility, and unbalanced macrocontrol targets (Shouhai Ding); economic growth and fluctuations, income distribution, and pollution control--the financial system reform of the twelfth five-year plan (Xinye Zheng); impacts of regional economic planning on China's macroeconomy (2005-10) (Jiuwen Sun and Anjun Hu); objectively understanding current disputes over exchange rates by learning from history (Jinbin Wang); economic crisis, strategic adjustment, and the sustainability of China's foreign trade deployment (Xiaosong Wang); real estate market control--gaming between central and local governments and the road to breakthrough (Fubing Su and Ran Tao); development and utilization of renewable energy under energy and environmental constraints (Feng Song and Xinye Zheng); and China's macroeconomic situation and policy (2010) (Chaoyu Zheng).

2013	B51	Rogers, Chris. 2013. "Crisis, Ideas, and Economic Policy-Making in Britain during the 1970s Stagflation." <i>New Political Economy</i> , 18(1): 1-20. This article examines the relationship between crisis, ideas, and economic policy-making in Britain during the 1970s stagflation, looking specifically at the turbulent years 1974-76. It argues that existing ideas-based approaches either fail to define 'idea' with any precision, or explain both the causes and resolution of the crisis in terms of competition between ideas, and therefore appear tautological. Instead, the article develops an Open Marxist framework suggesting that crises should be understood as an inherent systemic feature of capitalist social relations, which requires constant management so that governments can simultaneously achieve international financial market credibility and domestic political legitimacy. It uses this framework to produce an interpretation of economic policy change in Britain during the 1970s that argues policy-making was problematised in terms of the competing demands of international financial market credibility and domestic political legitimacy, and not in terms of a debate about economic ideas conducted in a context of crisis.

2013	F62 J26 Q51	Cheung, Calista. 2013. <i>Policies to support sustainable long-term growth in New Zealand</i> . OECD Publishing, OECD Economics Department Working Papers: 1076. As its workforce ages and major economies shift towards producing higher value-added goods and services, New Zealand will face increasing challenges to remain globally competitive and maintain high living standards. Future growth will need to come increasingly from productivity gains, and resources will have to shift towards activities that rely more on skills, technology and intangible assets. Strengthening international linkages will be crucial to overcoming geographic disadvantages and will require improvements in the information and communications technology infrastructure, together with innovation leveraged off the country's strong primary industry knowledge base. Continuing to raise skill levels and the pensionable age will also help counter the effects of ageing. Lifting national saving, partly by targeting a higher public saving rate, will reduce the persistently high relative real interest rates and the sustained overvaluation of the real exchange rate, which potentially harm economic activity. To improve the sustainability of growth, revenues from non-renewable resource extraction need to be invested for the benefit of future generations and greater efforts devoted to mitigate the damage to natural capital from economic activity, particularly with respect to water quality. This Working Paper relates to the 2013 OECD Economic Review of New Zealand (www.oecd.org/eco/surveys/New_Zealand).
2013	F68	Margaritis, Konstantinos. 2013. <i>FUNDAMENTAL RIGHTS IN THE EEC TREATY AND WITHIN COMMUNITY FREEDOMS</i> . Centre for European Studies, Alexandru Ioan Cuza University, CES Working Papers. It has been widely argued that the European Economic Community (EEC) was based on principles of economic integrity and growth through the creation of a common market; this is not far from reality. The Treaty of Rome was full of provisions that enhanced economic co-operation and increased the sense of liberalization in Europe, such as the four, now traditional, Community freedoms. Although all the above applied, there were articles within the EEC Treaty where fundamental rights were guaranteed; more than that, fundamental rights that occurred from the Community freedoms, even in a basic level. This is of highest importance since the interpretation of those provisions gave the initiative for further development in the field of fundamental rights protection within the Community legal order, throughout legislative procedure and case law. The aim of this paper is to present the fundamental rights as highlighted in the EEC Treaty and critically approach their concept under Community law.
2013	G13 Q12 Q15	Maart-Noelck, Syster C., Oliver Musshoff, and Moritz Maack. 2013. "The Impact of Price Floors on Farmland Investments: A Real Options Based Experimental Analysis." <i>Applied Economics</i> , 45(34-36): 4872-82. Price floors are a common instrument for market intervention to stimulate investments. In some cases, it can be observed that a price floor does not have the stimulating effect. We experimentally analyse the investment behaviour of students who take the role of farmers. The experiment considers an investment problem under uncertainty in a 'with price floor' and a 'no price floor' treatment, stylizing a decision to take an ongoing farmland investment option. We compare the actual investment behaviour with normative benchmarks of the net present value and the real options approach. Furthermore, we look at order and learning effects. The results show that the price floor has no significant impact on the willingness to invest, whereas the effects of order were statistically significant. The investment reluctance arising from an abolishment is stronger than the investment stimulation arising from the introduction of a price floor. Furthermore, neither the net present value nor the real options approach is appropriate to predict the investment behaviour in general. Nevertheless, the predictions of the real options approach enable an approximation of the participants' investment behaviour if the individuals have an adequate chance to learn from personal experience.
2013	H12	Asensio, Angel. 2013. "Coping with the European Public Debt Problem: The Desperate New "Growth Pact" of 2012 and Its Aftermath." <i>International Journal of Political Economy</i> , 42(2): 42-62. The paper examines the main instruments involved in Europe's "new" strategy in 2012. It explains why none are suited to the current challenges in terms of growth recovery and public debt control. The reason is basically that all the instruments focus on factor cost reductions (capital and labor), that is, on the supply side of the economy, while, the evidence clearly suggests that the main issue is on the demand side. Hence, drawing on a few basic equations, the paper discusses the conditions under which a fiscal stimulus might eventually reduce the public deficit and help control the debt by means of induced growth and fiscal revenues. This is not to say that a balanced budget per se is a desirable objective, for it is acknowledged that a public deficit may be desirable in the long run to foster economic growth. The purpose here is to show that, in the context of the European sovereign debt problem, a fiscal stimulus could eventually reduce the deficit and the debt ratio while stimulating economic growth. The formal condition proves to be reachable for the range of the key parameters observed in most member countries of the Organization for Economic Cooperation and Development. The paper

Year	DE	Title and Abstract
		also discusses the problems that could make the condition more difficult to deal with in the European context and how they could be solved.
2013	J26	THE SAME AS F62 Cheung, Calista. 2013. <i>Policies to support sustainable long-term growth in New Zealand</i>. OECD Publishing, OECD Economics Department Working Papers: 1076
2013	J45	Hernandez de Cos, Pablo, and Enrique Moral-Benito. 2013. "What Drives a Successful Fiscal Consolidation?" <i>Applied Economics Letters</i>, 20(7-9): 748-53. Fiscal consolidations are currently in the agenda of fiscal authorities in many countries. Using Bayesian Model Averaging to overcome the problem of model uncertainty, we find that growth-enhancing policies and cuts in public wages are the most appropriate ingredients for successfully reducing debt levels and budget deficits.

2013	P47	Gatzia, Dimitria Electra. 2013. "The Problem of Unemployment." <i>Journal of Self-Governance and Management Economics</i>, 1(4): 7-25. The aim of this paper is to address the problem of unemployment. Economists generally agree that a zero rate of unemployment is not only unattainable but also undesirable within capitalism. This is problematic because, as it will be shown, unemployment has adverse effects on both individuals and societies. Assuming that the primary aim of economics is to improve people's lives, it behooves us to find a solution to the problem of unemployment. Two solutions will be offered. The first works within the confines of the capitalist system—it requires instituting welfare policies that alleviate the adverse effects of unemployment. The second involves a paradigm change—it requires replacing capitalism with an alternative economic system that is consistent with a zero rate of unemployment.

2013	R38	Kuminoff, Nicolai V., V. Kerry Smith, and Christopher Timmins. 2013. "The New Economics of Equilibrium Sorting and Policy Evaluation Using Housing Markets." <i>Journal of Economic Literature</i>, 51(4): 1007-62. Households "sort" across neighborhoods according to their wealth and their preferences for public goods, social characteristics, and commuting opportunities. The aggregation of these individual choices in markets and in other institutions influences the supply of amenities and local public goods. Pollution, congestion, and the quality of public education are examples. Over the past decade, advances in economic models of this sorting process have led to a new framework that promises to alter the ways we conceptualize the policy evaluation process in the future. These "equilibrium sorting" models use the properties of market equilibria, together with information on household behavior, to infer structural parameters that characterize preference heterogeneity. The results can be used to develop theoretically consistent predictions for the welfare implications of future policy changes. Analysis is not confined to marginal effects or a partial equilibrium setting. Nor is it limited to prices and quantities. Sorting models can integrate descriptions of how nonmarket goods are generated, estimate how they affect decision making, and, in turn, predict how they will be affected by future policies targeting prices or quantities. Conversely, sorting models can predict how equilibrium prices and quantities will be affected by policies that target product quality, information, or amenities generated by the sorting process. These capabilities are just beginning to be understood and used in applied research. This survey article aims to synthesize the state of knowledge on equilibrium sorting, the new possibilities for policy analysis, and the conceptual and empirical challenges that define the frontiers of the literature.
2013	R38	Zhu, Yapeng. 2013. "Policy Entrepreneurship, Institutional Constraints, and Local Policy Innovation in China." <i>China Review</i>, 13(2): 97-122. Policy entrepreneurship has been a key concept to explain policy dynamics and policy changes. Despite considerable debate on the role of policy entrepreneurs in the policy-making process, insufficient effort has been put forth on motivations of policy entrepreneurs and interactions between policy entrepreneurs and other key players in different settings. This article explores the role of policy entrepreneurship in local policy process in a transitional society, China, with special reference to housing reform experience in Guizhou Province. It argues that value, knowledge, and tactics such as framing are crucial for policy entrepreneurship. The policy entrepreneur both is constrained by and takes advantage of existing institutional arrangements. By highlighting personal attributes and maneuvers of a key policy entrepreneur in introducing an innovative housing model, this research contributes to the literature on both the policy entrepreneur and local politics in China.
2013	R51	Bahl, Roy, and Jorge Martinez-Vazquez. 2013. "Sequencing Fiscal Decentralization." <i>Annals of Economics and Finance</i>, 14(2): 623-70. While there is extensive knowledge about how to design fiscal decentralization policies, considerably less is understood about how a decentralization program should be sequenced and implemented. Countries embarking on decentralization often struggle with decisions about the essential components of decentralization including the order of an introduction of decentralization policies, the number of years necessary to bring a full program on line, and the components of the transition strategy. We argue that the sequencing of decentralization policies is an important determinant of its success. The consequences of a poorly sequenced decentralization program can range from minor delays and complications to ineffectiveness and subsequent failing support of decentralization efforts, macroeconomic instability, and fundamental failure in public sector delivery. At a minimum, the strategy of "making it up as we go" will not lead to the same structure of decentralization as will a planned strategy. The paper raises two questions: First, is there an optimal sequencing for decentralization policies and implementation? Our answer is that there is, and that following these sequencing rules can reduce the costs and risks of implementing fiscal decentralization. Second, to what extent do countries follow these optimal sequencing rules? The answer is, in general, they do not. The gap between theory and practice is a result of the complexity of sequencing design, which discourages fiscal planners from implementing the full process. In addition, sequencing requires a sustained discipline and vision for its implementing, as well as overcoming pressures from political actors, especially in developing countries.

"Risks of an Inconsistency between the Fiscal Policy and the External Balance in a Short Term Period within the Context of the Maastricht Criteria--A Focus on the Czech Republic." <i>Ekonomie a Management</i> , 9(4): 5-26. The article tried to analyze the relation between the fiscal policy attitude and the external balance in the Czech Republic within the context of the Maastricht criteria. The article explores what is the impact of budget deficit decrease on the exchange rate development.

Year	DE	Title and Abstract
		We analyzed the effect of public finance consolidation on exchange rate development based on the current econometric approach using vector autoregression modelling amended by the impulse-response functions. This issue is based on the theoretical approach exploring the relationship between the fiscal policy attitude and the exchange rate development, revealing the contributions of the direct and indirect channel of the budget deficit decrease. Results of the carried out estimations proved that it is not possible to take into account purely statistical point of view. We closed the article with answering a key question--the dominance of the direct channel in the Czech economy might cause that a fiscal policy consolidation leads to the exchange rate depreciation and thus the Czech Republic might fail to meet Maastricht criteria on the exchange rate stability.

2006	F55	Issing, Otmar. 2006. "Europe's Hard Fix: The Euro Area." <i>International Economics and Economic Policy</i> , 3(3-4): 181-96. One of the most important economic policy issues is the selection of exchange rate regime. The possible choices range from the hard peg to a freely floating nominal exchange rate. Since the early 1990s a move towards the two corners of the exchange rate regime spectrum has been observed, especially in Europe with the creation of EMU. The move towards the corners is discussed from the perspective of Mundell's "impossible trinity" which states that among the three desirable objectives (1) stabilisation of the exchange rate, (2) free international capital mobility, and (3) an effective monetary policy oriented towards domestic goals, only two can be mutually consistent. Issues related to economic integration and EMU are reviewed, focusing on the famous question: Does one size fit all? Since monetary union raises some interesting issues of political nature, not present in other exchange rate arrangements, the paper ends with a discussion about some political aspects of monetary union.
2006	J54	Whyman, Philip. 2006. "Post-Keynesianism, Socialisation of Investment and Swedish Wage-Earner Funds." <i>Cambridge Journal of Economics</i> , 30(1): 49-68. This paper analyses the performance of one of the most controversial of recent economic policy "experiments", namely Swedish Wage-earner Funds (WEFs). It examines the ability of the WEFs to meet macroeconomic, financial and democratic objectives. The analysis indicates a favourable financial performance, but little significant democratisation. Macroeconomic influence was constrained by the limited size of the scheme and, though associated with positive changes in economic variables, the experiment was ultimately overwhelmed by the collapse of an asset price "bubble". Nevertheless, the performance of the WEFs has legitimised the concept of collective investment funds as an economic policy instrument.
2006	K14	Tella, Rafael Di, and Juan Dubra. 2006. <i>Crime and Punishment in the "American Dream"</i> . National Bureau of Economic Research, Inc. NBER Working Papers: 12641. We observe that countries where belief in the "American dream" (i.e., effort pays) prevails also set harsher punishment for criminals. We know from previous work that beliefs are also correlated with several features of the economic system (taxation, social insurance, etc). Our objective is to study the joint determination of these three features (beliefs, punitiveness and economic system) in a way that replicates the observed empirical patterns. We present a model where beliefs determine the types of contracts that firms offer and whether workers exert effort. Some workers become criminals, depending on their luck in the labor market, the expected punishment, and an individual shock that we call "meanness". It is this meanness level that a penal system based on "retribution" tries to detect when deciding the severity of the punishment. We find that when initial beliefs differ, two equilibria can emerge out of identical fundamentals. In the "American" (as opposed to the "French") equilibrium, belief in the "American dream" is commonplace, workers exert effort, there are high powered contracts (and income is unequally distributed) and punishments are harsh. Economists who believe that deterrence (rather than retribution) shapes punishment can interpret the meanness parameter as pessimism about future economic opportunities and verify that two similar equilibria emerge.
2006	L26	Choi, Young Rok, and Phillip H. Phan. 2006. "The Influences of Economic and Technology Policy on the Dynamics of New Firm Formation." <i>Small Business Economics</i> , 26(5): 493-503. This study attempts to reveal how macroeconomic and technology policies that encompass the opportunity and individual drivers of entrepreneurship explain the dynamics of new firm formation in a country. To do so we rely on the Schumpeterian, industrial organization, and labor economics traditions of entrepreneurship, and performed an exploratory test with longitudinal U.S. data from 1968 to 1993. The results of this study suggest that R&D investments, patents, economic concentration, pro-competition policy, and labor mobility are important areas in which government policy can influence the intensity of new firm formation.

2006	L26 L53	Coppola, Paola. 2006. "La fiscalita di compensazione nell'Unione europea. (The Tax Compensation Strategies in the EU. With English summary.)" <i>Rivista Economica del Mezzogiorno</i> , 20(1-2): 19-47. Tax compensation, mainly in the form of financial aids or of tax relief, represents an instrument largely advocated by entrepreneurs and political forces to enhance competition and economic development in the weakest regions. The paper points out that the EU legislation limits the use of tax compensation among Member countries and, in this view, may also arise a specific risk related to harmful tax competition. The author proposes a solution based on a new tax compensation scheme where Member States should support tax compensation to make their less developed areas more competitive.
2006	L53	Sloan, Brian, and Francis Chittenden. 2006. "Fiscal Policy and Self-Employment: Targeting Business Growth." <i>Environment and Planning C: Government and Policy</i> , 24(1): 83-98. The small-business sector is the breeding ground of new businesses, but distinguishing those firms that wish to grow from the hundreds of thousands of lifestyle firms is difficult. Studies suggest very few small firms seek growth, and fiscal policies aimed at promoting business growth could be misdirected in the belief that the ambition to grow is widespread in this part of the economy. The small-firm sector is dominated by the self-employed and an important classification is the large numbers of "own-account self-employed". It is unclear to what extent these people should be classified as true "business owners". Using face-to-face interviews, the authors explore the motivations for becoming self-

Year	DE	Title and Abstract
		employed and the growth aspirations of self-employed people. Based on the outcomes, suggestions are made about how fiscal policy might be targeted to improve neutrality and promote business growth.

2006	L72	Jimenez, Juan Pablo, and Varinia Tromben. 2006. "Fiscal Policy and the Commodities Boom: The Impact of Higher Prices for Non-renewables in Latin America and the Caribbean." <i>CEPAL Review</i>, 0(90): 59-84. For countries specializing in non-renewables, the usual challenges for fiscal policy are compounded by the intrinsic characteristics of these commodities. The countries in which non-renewables account for over 20% of exports include the Bolivarian Republic of Venezuela, Bolivia, Chile, Colombia, Ecuador, Mexico and Trinidad and Tobago. This article reviews the relationship between the improvement in these countries' terms of trade and the fiscal policy challenges they are having to cope with. To this end, it analyses the importance of the role played by the exploitation of these commodities, reviewing changes in their prices and their impact on the terms of trade. It also considers the performance of these countries in relation to the main characteristics of fiscal policy in the region and analyses developments in the public accounts following recent price rises, with emphasis on their impact and the policy decisions taken.

2006	Q51	Blake, Andon J., and Mark C. Roberts. 2006. "Comparing Petroleum Fiscal Regimes under Oil Price Uncertainty." <i>Resources Policy</i>, 31(2): 95-105. This study investigates and compares five upstream petroleum fiscal systems under crude oil price uncertainty. The fiscal systems analyzed are: the Alberta Canada tax and royalty system, the Papua New Guinea (PNG) (pre-2003) traditional Rate of Return (ROR) system, the Sao Tome and Principe/Nigerian Joint Development Zone (SNJDZ) Production Sharing Contract (PSC), the Tanzanian PSC/ROR hybrid system and the Trinidad and Tobago PSC. Contingent claims analysis is used to value the governments' tax claims under uncertainty using a numerical approach, viz., Monte Carlo simulation. Each system is tested to obtain the after-tax value accruing to firms as well as the distortionary effects introduced by the fiscal systems. The results are then ranked. The Alberta Canada and PNG fiscal systems provide companies with the highest after-tax values while also being the least distortionary. The Tanzanian system is the lowest in both rankings, providing relatively low after-tax values and introducing strong distortionary effects. The SNJDZ PSC imposed a relatively high tax burden on companies with median distortionary effects. The Trinidadian PSC generated a median tax burden on companies but has strong distortionary effects.

2007	B11 J81 N93	Munro, John. 2007. <i>The Usury Doctrine and Urban Public Finances in Late-Medieval Flanders: Annuities, Excise Taxes, and Income Transfers from the Poor to the Rich</i>. University of Toronto, Department of Economics, Working Papers. The objectives of this paper are three-fold. The first is to rebut Charles Kindleberger's famous dictum that usury 'belongs less to economic history than to the history of ideas'; and in particular to demonstrate that the resuscitation of the anti-usury campaign from the early 13th century led to a veritable financial revolution in late-medieval French and Flemish towns: one that became the 'norm' in modern European states from the 16th century (in England, from 1693): a shift in public borrowing from interest-bearing loans to the sale of annuities, usually called rentes or renten. The second objective of this paper is to measure the importance of renten in the civic finances of Flemish towns, in terms of both revenues and expenditures: from the annual town accounts Ghent (14th century only), and Aalst (1395-1550), where they had far greater importance. The related third objective is to measure the burden of the excise taxes for master building craftsmen in Aalst, in tables that measure the values of the excise tax revenues expressed in real terms: first, in the equivalent number of 'baskets of consumables' (which form of the base of the Consumer Price Index), and second their value in terms of the annual money-wage incomes of master masons (for 210 days).
2007	C78	Russo, Alberto, Michele Catalano, Edoardo Gaffeo, Mauro Gallegati, and Mauro Napoletano. 2007. "Industrial Dynamics, Fiscal Policy and R&D: Evidence from a Computational Experiment." <i>Journal of Economic Behavior and Organization</i>, 64(3-4): 426-47. We present an agent-based computational model in which bounded rational firms and workers trade on fully decentralized markets for final goods and labor by means of random matching protocols. The model replicates several macroeconomic phenomena regularly observed in the data, with aggregate features emerging from the localized interactions of individual entities.

Year	DE	Title and Abstract
		The model is then used as a computational laboratory to run an experiment on the role of fiscal policy in increasing macroeconomic performance.

2007	H39	Bhattarai, Keshab R. 2007. "Welfare Impacts of Equal-Yield Tax Reforms in the UK Economy." <i>Applied Economics</i>, 39(10-12): 1545-63. A multisectoral dynamic general equilibrium tax model with and without announcement effects for open and closed capital markets is used to evaluate efficiency gains and transitional effects from equal-yield tax reforms for seven different taxes in the UK economy. Impacts of an unanticipated tax reform on investment, capital accumulation, output and employment are compared to those of anticipated tax reforms. Households, producers, traders, investors and the government are found to be more capable of adjusting their economic behaviour when tax announcements are made in advance. In equal-yield tax experiments welfare gains up to 1.4% of base year GDP can occur by removing distortions in taxes. Welfare loss of up to 2.05% of it can happen if a less distortionary tax, such as the labour income tax is replaced by more distortionary taxes. These simulation results hold whether the capital markets are closed or open.
2007	H68	CV: Chote, Robert, Carl Emmerson, Christine Frayne, and Gemma Tetlow. 2007. "The Fiscal Rules and Policy Framework." In <i>The IFS Green Budget: January 2007</i> , ed. Robert Chote, Carl Emmerson, Andrew Leicester and David Miles, 32-56. London: Institute for Fiscal Studies.
2007	H68	Aristovnik, Aleksander, and Bostjan Bercic. 2007. "Fiscal Sustainability in Selected Transition Countries." <i>Ekonomicky Casopis/Journal of Economics</i>, 55(7): 659-75. In the article, we review recent literature on fiscal sustainability with particular reference to problems that are specific to transition countries. While the original literature on fiscal sustainability is chiefly focused on industrial countries there are by now few works that have focused on fiscal sustainability in transition countries. Consequently, the article's purpose is to assess the short-, medium- and long-term sustainability of fiscal policy (under set assumptions) on the national level in the great majority of transition countries which we divide into three main groups, i.e., Central and Eastern Europe (CEE), Southern and Eastern Europe (SEE) and the Commonwealth of Independent States (CIS). Based on the mainstream theory measures of fiscal sustainability, the results indicate that fiscal sustainability seems to be a problem in many transition countries, particularly in the Visegrad group countries (in CEE region) and in Albania and Croatia (in SEE region).
2007	H68	Mendoza, Enrique G., and Jonathan D. Ostry. 2007. <i>International Evidence on Fiscal Solvency: Is Fiscal Policy "Responsible"?</i> National Bureau of Economic Research, Inc, NBER Working Papers: 12947. This paper looks at fiscal solvency and public debt sustainability in both emerging market and advanced countries. Evidence of fiscal solvency, in the form of a robust positive conditional relationship between public debt and the primary fiscal balance, is established in both groups of countries, as well as in the sample as a whole. Evidence of fiscal solvency is much weaker, however, at high debt levels. The debt-primary balance relationship weakens considerably in emerging economies as debt rises above 50 percent of GDP. Moreover, the relationship vanishes in high-debt countries when the countries are split into high- and low-debt groups relative to sample means and medians, and this holds for industrial countries, emerging economies, and in the combined sample. These findings suggest that many industrial and emerging economies, including several where fiscal solvency has been the subject of recent debates, appear to conduct fiscal policy responsibly. Yet our results cannot reject the hypothesis of fiscal insolvency in groups of countries with high debt ratios, where the response of the primary balance to increases in debt is not statistically significant.

2007	H76	Kitterer, Wolfgang. 2007. "Nachhaltige Finanz- und Investitionspolitik der Bundeslander. (With English summary.)" <i>Perspektiven der Wirtschaftspolitik</i>, 8(0): 53-83. In Germany the sustainability of fiscal policy is determined to a substantial part by the federal states (Bundeslaender). Their portion of the public debt amounts to nearly 40 percent. Econometric tests show that the fiscal policy of the federal states taken collectively is not sustainable. The requirement for fiscal sustainability is fulfilled only by two western Laender, Hesse and North-Rhine Westphalia, and one eastern Land (Saxony). Furthermore, it is shown that the constitutional "golden rule" stipulating that borrowing should not exceed investment expenditures does not ensure the solvency of the states. This holds for theoretical reasons but also because there is a lack of clarity and enforceability. Finally, it is argued that the commitment of subnational governments to sustainable public finances could be strengthened by invigorating state-level tax and expenditure autonomy.
2007	H76	Seitz, Helmut. 2007. "Nachhaltige Finanz- und Investitionspolitik der Bundeslander: Die ostdeutsche Perspektive. (With English summary.)" <i>Perspektiven der Wirtschaftspolitik</i>, 8(0): 84-115. The article examines the fiscal adjustments necessary in East Germany to ensure that the East German state and local government sector runs a sustainable fiscal policy in the next decades and maintains a high level of public investment expenditures. The latter is of special importance in East Germany because in some areas the public infrastructure capital stock in East Germany is still deficient as compared to West German standards. In addition, regional development policy still uses capital subsidies to attract mobile business capital to East Germany. These subsidies are co-financed by the East German state governments, the federal government as well as the EU. We derive a sustainable time path of primary expenditures in East Germany and estimate the volume of investment expenditures that can be financed without violating fundamental sustainability restrictions. In addition, we inspect the fiscal federalism perspective of public investment taking into account the specific institutional settings in Germany.

Empirical evidence suggests that the incidence of child labour taken as a whole has declined in the developing countries with economic growth due to foreign capital. But, in some high-growth-prone areas, the problem has been on the rise. A pertinent question is why liberalized investment policies have produced dissimilar

Year	DE	Title and Abstract
		results in different cases. The present paper is intended to provide an answer to the above question using a three-sector general equilibrium framework with two informal sectors and a non-traded final commodity. The paper is also designed to investigate the efficacy of an education subsidy policy and a lump-sum tax on the richer people in controlling the problem of child labour. We find that the effects of different policies on child labour crucially hinge on the relative intensities in which child labour and adult labour are used in the two informal sectors. However, we find that on the whole a policy of subsidy on education is more effective in comparison with the policy of economic growth with foreign capital in eradicating the prevalence of the evil in the system.

(With English summary)." <i>Lecturas de Economia</i> , 0(67): 195-223. This article analyzes the monetary and institutional impacts of the domestic public debt in 19th century Colombia. It shows the nature of this debt and its evolution so as to ultimately sketch one side of the institutional matrix of that century. The article draws upon the New Economic Institutionalism and it is derived from a broader research where fiscal data and qualitative information were built by using primary sources. It points out the close link between the issuing of debt notes and civil wars, and displays evidence on how this debt structured an impure gold standard. It is found that this debt had impact on the price level and strengthened the persistence of the monetary chaos and civil wars.
2007	N71	CV: Wallis, John Joseph. 2007. "The National Era." In <i>Government and the American Economy: A New History</i> . Price Fishback, 148-87. Foreword by Douglass C. North. Chicago and London: University of Chicago Press.

(Macroeconomic Policies and Performance in the Euro Area: Institutions, Incentives, Strategies, With English summary)." <i>Revue de L'OFCE</i> , 0(102): 249-81. Economic performance has been feeble in the Euro area since the monetary union process was put in motion in the early 1990s. While the cause for this under-performance remains subject to debate, we argue in this paper that the rules and institutions governing the Euro area are clearly not conducive to high coordinated growth policies. Because monetary authorities are too much concerned with price stability, the pro-cyclical bias of fiscal policies is reinforced and member states are even more pressured to pursue social disinflation policies by the misalignment of the exchange rate of the Euro. A more balanced interpretation of the European treaties should remedy the current predicament and foster macroeconomic policies oriented toward high sustainable growth and the preservation of social justice.
2007	P10	Andersen, Torben. 2007. <i>The Scandinavian Model - Prospects and Challenges</i> . CESifo GmbH, CESifo Working Paper Series, CESifo Working Paper No. 1903. Scandinavian countries are often portrayed in policy debates as model examples having shown how to square concerns for efficiency and equity. The core principle of the Scandinavian welfare model is an individual entitlement to public sector provisions combined with collective financing via taxes. However, a high employment rate is needed to ensure financial viability of this model. The Scandinavian model faces several challenges which affect the possibilities of maintaining a high employment ratio, namely, demographic changes, a growth dilemma and globalization. This paper discusses how these challenges affect the need and scope for reforms of the Scandinavian welfare model.

2008	D86	Lee, Junsang, and Yili Chien. 2008. <i>Why Tax Capital?</i> . Australian National University, College of Business and Economics, School of Economics, ANUCBE School of Economics Working Papers. We study optimal capital income taxation with a Ramsey problem and relate this optimal taxation problem to the question that has been asked in the asset pricing literature, which is why the risk free interest rate is too low. We show that the Ramsey planner chooses the optimal level of capital stock to be one that satisfies the modified golden rule in the steady state under some conditions. The conditions include sufficient government tax instruments and ability to issue bonds. We argue that the optimal capital level is different from that chosen in a competitive equilibrium unless the competitive equilibrium risk free interest rate is same as the time discount rate in the steady state. This difference in the choice of capital motivates imposing a positive capital income tax (or subsidy) on households to induce them to invest at the socially optimal amount. As examples, we investigate optimal capital taxation in a decentralized economy with limited commitment and one with private information. However, the result still holds in various types of economies with risk free interest rate that is too low.
2008	F00	Avendano, Rolando, Helmut Reisen, and Javier Santiso. 2008. <i>The Macro Management of Commodity Booms: Africa and Latin America's Response to Asian Demand</i> . OECD Development Centre, OECD Development Centre Working Papers: 270. Strong growth in China and India has led to improvements in raw-material exporting countries' terms of trade and attracted complementary finance. The long-term challenge for these countries, where institutions are often fragile, is to avoid the so-called "resource curse". This paper aims to provide a comparative perspective between policy choices in commodity-exporting countries, contrasting the experiences of Africa and Latin America. First, it highlights global macroeconomic links between the Asian Drivers (China and India) and these regions. Second, it discusses optimal policy responses from a macroeconomic and institutional perspective. Third, it presents empirical evidence on macroeconomic, particularly fiscal responses to Dutch disease and the

Year	DE	Title and Abstract
		specialisation effects caused by Asian Drivers' demand and assesses the benefits and challenges offered by the Asian Drivers from a macro perspective for both Africa and Latin America.
2008	F60	Belyo, Pal, and Istvan Molnar. 2008. "Outlook on the Hidden Economy." <i>Development and Finance/Fejlesztés és Finanszírozás: Quarterly Hungarian Economic Review</i>, 0(4): . Important features common to hidden economic activities are cash payments and tax evasion, aimed at making the given business activities difficult or impossible to track down. Globalisation trends are well in evidence in the shadow economy too. Not only multinational companies but individual countries or groups of countries can become players of the international hidden economy. Due to globalisation, non-cooperation in data collection can also lead to difficulties: international comparisons, national finance, international organisations, national monetary and tax policy and the competitiveness of individual countries may depend on the size of the hidden economy.
2008	F63 F65	Kliass, Paulo, and Pierre Salama. 2008. "A globalizacão no Brasil: Responsável ou bode expiatório? (Globalization in Brazil: Guilty or Scapegoat? With English summary.)." <i>Revista de Economia Política/Brazilian Journal of Political Economy</i>, 28(3): 371-91. After the sequence of structural adjustments decisions suggested by the IMF, Brazilian economy became wider opened, as the consequences from financial globalization were stronger than those from commercial globalization. Nevertheless, social and economical reality didn't show much improvement. On the contrary, figures on economic increase and inequalities show Brazil behind the average of developing countries. Even if the effects caused by "mondialisation" on weakened economies are well known, globalization can not be taken as the only guilty of weak economic increase, for maintaining the high level of inequalities or for the increase of precariousness. Responsibility must be searched on high inequalities in where operates "mondialisation", on weakness of public policies, on irresponsible way of opening of the economy and in fiscal policy in favor of financial sector. Other countries have reached quite different results, once they have adopted different public policies, which goal was to establish control and reduction upon the negatives effects of globalization.
2008	H44	Schwartz, Gerd, Ana Corbacho, and Katja Funke, eds. 2008. <i>Public Investment and Public-Private Partnerships: Addressing Infrastructure Challenges and Managing Fiscal Risks</i>, Houndmills, U.K. and New York: Palgrave Macmillan. Eighteen papers examine how governments should address the infrastructure challenges related to public-private partnerships (PPPs) and manage associated fiscal and macroeconomic risks. Papers discuss public capital and economic growth--key issues for Europe; a primer on public investment in Europe; challenges for public investment in new EU member states; budgeting of public investments; PPPs and fiscal risks--whether governments should worry; controlling spending commitments in PPPs; PPPs and fiscal risks--the experience of Portugal; the OECD principles for private sector participation in infrastructure; legal regimes for PPPs in Central and Eastern Europe; combining PPP with EU grants; managing private finance initiative projects in the United Kingdom; negotiating and renegotiating PPPs and concessions; PPPs--some accounting and reporting issues; the International Public Sector Accounting Standards Board--service concession arrangements; accounting for PPPs--the Eurostat approach; framework for PPP audits in the United Kingdom; PPP audits in Portugal; and Hungary's audit experience with PPPs.
2008	H75	McKenzie, Fiona, John Martin, and Chris Paris. 2008. "Fiscal Policy and Mobility: The Impact of Multiple Residences on the Provision of Place-Based Service Funding." <i>Australasian Journal of Regional Studies</i>, 14(1): 53-71. The propensity for Australians to move about more often and over greater distances as part of their employment, recreation, and social life presents challenges for governments in the design and management of equitable fiscal policy to fund infrastructure, education, health and welfare, and other services traditionally predicated on place-based criteria. The acquisition of second homes, ostensibly for recreation purposes, is a widely cited example in the debate about who pays how much for locality-based services. Other examples can be found in health service funding, education provision, and transport infrastructure. While most people who use two or more dwellings have the financial security and personal wherewithal to live across multiple dwellings there are others who have much less choice and live between different places because personal circumstances dictate this. This paper suggests that fiscal policy predicated on place-based criteria persists because it is administratively simpler for public managers already operating in complex public policy environments. Nevertheless, we argue that place-based and social mobility criteria are not mutually exclusive. Recognition of the growing trend of social mobility may lead to better policy decisions. The paper aims to provide policy makers and public managers with a more accurate understanding of population mobility such that they can begin to effectively factor such trends into place-based fiscal policy.

2008	J44	Bajen Garcia, Alvaro. 2008. "Propuesta de un marco fiscal propio del trabajo autónomo. (Proposal for an Attorney's Own Self-Employment. With English summary.)." <i>Revista de Estudios Cooperativos</i>, 0(96): 174-96. With the adoption of the Statute of Autonomous Labor, the figure of the individual entrepreneur is highlighted in our country through the provision that makes this businessman, comes the concept of self-employment as a reality that will have expansive force in all legal orders. Taxation of the statute does not address a specific tax, only mandates to the authorities so that an appropriate fiscal policy to promote self-employment exists. But our country must address a fiscal framework for self-employment, promoting and encouraging the activities of these self-employed through the establishment of tax benefits.
2008	K13	CV: Griffith, Thomas D. 2008. "Should "Tax Norms" Be Abandoned? Rethinking Tax Policy Analysis and the Taxation of Personal Injury Recoveries." In <i>Economics of Tax Law. Volume 1.</i>, ed. David A. Weisbach, 3-49. Elgar Reference Collection. Economic Approaches to Law, vol. 19. Cheltenham, U.K. and Northampton, Mass.: Elgar.
2008	K20	Shin, Inseok. 2008. "Understanding State Intervention in the Financial System: A Simple Framework." <i>Journal of Economic Development</i>, 33(1): 165-85. I offer a simple framework to address why state intervention in the financial system, prevalent in less developed economies, yields various welfare outcomes, and why such conventional reforms as privatization and fiscal reforms prove insufficient to eliminate state intervention. In the model three institutional factors are in play: 1) control rights over financial institutions; 2) cash-flow rights of the private over financial institutions; 3) monitoring capability of the public on tax/resource collection by the state. Based on the model, I show that state intervention can be developmental or derogatory depending on institutional traits including degree of privatization and monitoring capability of the public over the tax collection by the state. Further I illustrate that as long as state has control rights, conventional reforms such as fiscal reform, and privatization may not be enough in eliminating state intervention in the financial system.
2008	L84	Imai, Yutaka, and Howard Oxley. 2008. "Managing Public Costs in the Japanese Health and Nursing Care Sector." <i>Osaka Economic Papers</i>, 58(2): 8-22. This paper looks at some of the longer-term fiscal issues in Japan arising from likely developments in the health and nursing care sector. It first looks at recent OECD information on spending patterns. Likely future trends in spending are then discussed drawing on the results of recent expenditure projections of health and nursing care out to 2050. This is followed by a discussion of possible policy responses, focusing on areas where the efficiency of health care provision might be improved. Some tentative conclusions are drawn in a final section.

2008	N36	Couyoumdjian, Juan Pablo. 2008. "Primary Education and Fiscal Policy in Mid-19th Century Chile: In Search of a Balance." <i>Revista de Historia Economica</i> , 26(2): 145-71. In this paper, we examine a proposal regarding the organization of the system of primary education in Chile submitted by then Deputy Manuel Montt. This project represented a long overdue initiative in support of the diffusion of education in Chile and a radical way of viewing its organization. To the extent that this project included considerations regarding the funding of this system, it also seems relevant to the organization of Chile's fiscal framework. Although Montt's proposal was ultimately discarded, the related discussions represent an interesting setting for fundamental debates regarding the foundation of the fiscal system of 19th century Chile.
2008	P46	Ahmed, Habib. 2008. "Zakah, Macroeconomic Policies, and Poverty Alleviation: Lessons from Simulations on Bangladesh." <i>Journal of Islamic Economics, Banking and Finance</i> , 4(2): 81-105. The paper studied the role of zakah and macroeconomic policies aimed at growth of income and providing opportunities to the poor in eliminating poverty. Simulation of various macroregimes and zakah schemes for Bangladesh indicate that while macroeconomic policies play an important role in reducing poverty, poverty cannot be eliminated without using zakah in an effective way. The paper also suggests that there are certain conditions under which zakah will be able to make an impact on poverty. First, zakah has to be complemented by robust macroeconomic policies that enhance growth and also redistribute income to eliminate poverty. Second, while more zakah has to be collected and disbursed, the impact on poverty will only be significant when a larger percentage of zakah proceeds are used for productive purposes. Given the important role of zakah in poverty alleviation, there is a need for countries to integrate this vital faith-based institution in the development strategy and programs of Muslim countries, including Bangladesh.

2009	C20	Dehon, Catherine, Marjorie Gassner, and Vincenzo Verardi. 2009. "Beware of 'Good' Outliers and Overoptimistic Conclusions." <i>Oxford Bulletin of Economics and Statistics</i> , 71(3): 437-52. The main goal of this paper is to warn practitioners of the danger of neglecting outliers in regression analysis, in particular, good leverage points (i.e. points lying close to the regression hyperplane but outlying in the x-dimension). While the types of outliers which do influence regression estimates (vertical outliers and bad leverage points) have been extensively investigated, good leverage points have been largely ignored, probably because they do not affect the estimated regression parameters. However, their effect on inference is far from negligible. We propose a step-by-step procedure to identify and treat all types of outliers. The paper of Persson and Tabellini [American Economic Review (2004) Vol. 94, pp. 25-46] linking the degree of proportionality of an electoral system to the size of government is discussed to illustrate how the choice of a measure and the existence of atypical observations may substantially influence results.
2009	C20	Brixiova, Zuzana, Laura Vartia, and Andreas Worgotter. 2009. <i>Capital Inflows, Household Debt and the Boom-bust Cycle in Estonia</i> . OECD, Economics Department, OECD Economics Department Working Papers: 700. From 2000 to 2007, Estonia was one of the fastest growing emerging market economies. A housing boom, fuelled by capital inflows and credit, resulted in skyrocketing house prices and an over-expanded construction sector. However, the currency board limited the Bank of Estonia's ability to curb credit growth, while the fiscal policy framework amplified the cycle through pro-cyclical spending increases and tax cuts. As credit was mostly financed by cross-border loans from foreign banks, the risks of disruptions to credit flows and financial contagion have increased. Some have already materialised through tightened lending standards and capital outflows. Estonia is now in a severe recession. To restore high and sustainable growth, the country will need to rebalance its resources from non-tradables towards exports. Regaining external competitiveness will be challenging, however, given the fixed exchange rate and recent devaluations in partner countries. Flexibility of the economy will thus be crucial. Over the medium term, policymakers could also strengthen incentives for a better functioning of the housing finance market and gradually remove the pro-cyclical bias of fiscal policy.

2009	C83	Sahm, Claudia R., Matthew D. Shapiro, and Joel B. Slemrod. 2009. <i>Household Response to the 2008 Tax Rebate: Survey Evidence and Aggregate Implications</i> . National Bureau of Economic Research, Inc, NBER Working Papers: 15421. Only about one-fifth of respondents in the Reuters/University of Michigan survey report that the 2008 tax rebates led them to mostly increase spending, while over half said it would lead them to mostly pay off debt. Of those in the mostly-spend category, the response was swift, with over 80 percent reporting increasing their spending within three months of receiving their rebate. Older households, households with higher wealth and higher income, and those expecting future income growth were generally more likely to spend the rebates.

Year	DE	Title and Abstract
		A review of other surveys confirms the general pattern of results and suggests that small changes in survey design do not have a major effect on the distribution of responses. The distribution of survey answers corresponds to an aggregate MPC after one year of about one-third. The paper combines this survey-based estimate of the MPC and the survey-based estimate of the timing of spending to show that the rebates help explain the aggregate movements in saving, spending, and debt in 2008. Because the rebate was large and distributed over a short period, it had a non-trivial effect on total spending in the second and third quarters of 2008. Nonetheless, the results imply that the rebates provided only a modest stimulus to spending per dollar of rebate.
2009	D03	Congdon, William J., Jeffrey R. Kling, and Sendhil Mullainathan. 2009. "Behavioral Economics and Tax Policy." <i>National Tax Journal</i> , 62(3): 375-86. Behavioral economics is changing our understanding of how economic policy operates, including tax policy. In this paper, we consider some implications of behavioral economics for tax policy, such as how it changes our understanding of the welfare consequences of taxation, the relative desirability of using the tax system as a platform for policy implementation, and the role of taxes as an element of policy design. We do so by reviewing the logic of specific features of tax policy in light of recent findings in areas such as tax salience, program take-up, and fiscal stimulus.
2009	D53	Miyazaki, Kenji, Kiyohiko G. Nishimura, and Makoto Saito. 2009. "Incomplete Financial Markets, Irreversibility of Investments and Fiscal and Monetary Policy Instruments." <i>Japanese Economic Review</i> , 60(3): 271-300. In this paper, we analyse the use of fiscal and monetary instruments to improve long-run welfare when productive investment is irreversible and uncollateralizable and there is no insurance. Only fiat money or government issued bonds provide self-insurance. We demonstrate that an increase in precautionary savings reduces irreversible productive investment. Hence, subsidies to promote productive but irreversible investment should be financed in such a way that they do not reduce insurance capability. When lump-sum subsidies are high, a consumption tax is likely to be more redistributive and thus more consumption smoothing than are the other sets of instruments analysed in our model.
2009	E02	Caselli, Francesco, and Guy Michaels. 2009. <i>Do Oil Windfalls Improve Living Standards? Evidence from Brazil</i> . National Bureau of Economic Research, Inc, NBER Working Papers: 15550. We use variation in oil output among Brazilian municipalities to investigate the effects of resource windfalls. We find muted effects of oil through market channels: offshore oil has no effect on municipal non-oil GDP or its composition, while onshore oil has only modest effects on non-oil GDP composition. However, oil abundance causes municipal revenues and reported spending on a range of budgetary items to increase, mainly as a result of royalties paid by Petrobras. Nevertheless, survey-based measures of social transfers, public good provision, infrastructure, and household income increase less (if at all) than one might expect given the increase in reported spending. To explain why oil windfalls contribute little to local living standards, we use data from the Brazilian media and federal police to document that very large oil output increases alleged instances of illegal activities associated with mayors.
2009	E39	Posch, Olaf. 2009. <i>Explaining Output Volatility: The Case of Taxation</i> . CESifo Group Munich, CESifo Working Paper Series: CESifo Working Paper No. 2751. This paper presents empirical evidence against the popular perception that macro volatility is exogenous. We obtain tax effects on macro aggregates in the stochastic neoclassical model. Taxes are shown to affect the second moment of output growth rates without affecting the first moment. Exploiting heterogeneity patterns in a panel of OECD countries, we estimate tax effects on macro volatility, explicitly modeling the unobserved variance process. We find a strong empirical link between taxes and output volatility. Accounting for non-stationarity of taxes and output volatility, we find empirical evidence of a cointegrating relationship.
2009	F44	Lozano, Ignacio. 2009. "Efectos de la crisis financiera internacional sobre la postura fiscal del gobierno colombiano (Primera parte). (The Financial Crisis Effects on the Colombian Government Fiscal Stance [First Part]. With English summary)." <i>Revista Finanzas y Política Económica</i> , 1(2): 71-89. The Lehman Brothers crash in September 2008 marked the beginning of one of the worst years in the history of international financial markets. This event also determined the initiation of the global economic recession which will last at least three years. The data have been confirmed that virtually all industrialized and most emerging countries faced a deep recession, with serious effects on employment and poverty, so the collapse today is similar to the crisis of the thirties. This paper describe how the crisis was conceived in the financial system in the United States and spread to the rest of the industrialized economies. We also describe the transmission channels of the crisis into emerging markets and, in particular, we show the first effects on the major economies of Latin America.
2009	F44	Reati, Angelo, and Jan Toporowski. 2009. "An Economic Policy for the Fifth Long Wave." <i>PSL Quarterly Review</i> , 62(248-251): 147-90. The paper starts by reviewing a recent contribution on long-waves, in order to recall the essential points of a theory that, better than any other, is able to explain the long term development of capitalist economies. Considering that the present technological revolution in ICT is part of the broad phenomenon of a new long wave, it follows that the main focus of economic policy should be to support the diffusion of the new technological style and to favour the institutional changes required by such an objective. On the basis of a selective view of what is deemed crucial to foster the full implementation of the new long wave, four broad guidelines are suggested: (i) a Keynesian policy for demand; (ii) a policy to re-establish the primacy of productive capital through systematic concerted open market operations to regulate liquidity in the financial markets; (iii) a reconstruction of the employment relationship that, while taking into consideration the requirements of the new technological paradigm, preserves the essential features of the "European social model"; a targeted flexibility of labour, that contrasts with the all-out market flexibility that results from the neoclassical theory, is also suggested; (iv) a regime for intellectual property rights that avoids the drawbacks--both ethical and economic current US practices.
2009	F44	Krugman, Paul R. 2009. "The Road to Global Economic Recovery, 2009." <i>Revista de Economía del Caribe</i> , 4(0): 1-18. This document contains three parts: the first part focuses on the lessons that have been learnt from the 2007-2009 crisis and how economic authorities handled the shock suffered in most variables. The conclusion is that Government intervention through fiscal policy is the only way to offset the weakness of households and firms. Monetary policy on the other hand can help, but it has limits in its ability to become a real source of economic growth. The second part reviews the current economic affairs including a discussion on whether the crisis has ended. Krugman accepts that the crisis is over, but he believes that we are still far from an economic expansion. Finally, the article analyzes the economic situation of Latin America and Colombia in particular. It points out that this crisis did not start in our countries and it did not happen because of bad economic policies as it used to happen in previous crises in emerging economies. The crisis had an impact on these countries because of its effects on trade, commodities, and capital flows due to the lower economic activity in developed countries. However, we have evidence of strength in developing countries.

2009	J78	CV: Brown, Dorothy A. 2009. "Racial Equality in the Twenty-First Century: What's Tax Policy Got to Do with It?." In <i>Critical Tax Theory: An Introduction</i> , ed. Anthony C. Infanti and Bridget J. Crawford, 42-45. Cambridge and New York: Cambridge University Press.
2009	J88	Schmitt, John. 2009. <i>Inequality as Policy: The United States Since 1979</i> . Center for Economic and Policy Research (CEPR), CEPR Reports and Issue Briefs . Since the end of the 1970s, the United States has seen a dramatic increase in economic inequality. While the United States has long been among the most unequal of the world's rich economies, the economic and social upheaval that began in the 1970s was a striking departure from the movement toward greater equality that began in the Great Depression, continued through World War II, and was a central feature of the first 30 years of the postwar period. This is not due to chance circumstances but is the direct result of a set of policies designed first and foremost to increase inequality.
2009	L43	Hannsgen, Greg, and Dimitri B. Papadimitriou. 2009. <i>Lessons from the New Deal--Did the New Deal Prolong or Worsen the Great Depression?</i> . Levy Economics Institute, The Economics Working Paper Archive . Since the current recession began in December 2007, New Deal legislation and its effectiveness have been at the center of a lively debate in Washington. This paper emphasizes some key facts about two kinds of policy that were important during the Great Depression and have since become the focus of criticism by new New Deal critics: (1) regulatory and labor relations legislation, and (2) government spending and taxation. We argue that initiatives in these policy areas probably did not slow economic growth or worsen the unemployment problem from 1933 to 1939, as claimed by a number of economists in academic papers, in the popular press, and elsewhere. To substantiate our case, we cite some important economic benefits of New Deal-era laws in the two controversial policy areas noted above. In fact, we suggest that the New Deal provided effective medicine for the Depression, though fiscal policy was not sufficiently countercyclical to conquer mass unemployment and prevent the recession of 1937-38; 1933's National Industrial Recovery Act was badly flawed and poorly administered, and the help provided by the National Labor Relations Act of 1935 came too late to have a big effect on the recovery.
2009	L62	Ryan, Lisa, Susana Ferreira, and Frank Convery. 2009. "The Impact of Fiscal and Other Measures on New Passenger Car Sales and CO2 Emissions Intensity: Evidence from Europe." <i>Energy Economics</i> , 31(3): 365-74. This paper examines the impact of national fiscal measures in the EU (EU15) on passenger car sales and the CO2 emissions intensity of the new car fleet over the period 1995-2004. CO2 emissions and energy consumption from road transport have been increasing in the EU and as a result since 1999 the EU has attempted to implement a high profile policy strategy to address this problem at European level. Less prominent is the fact that Member States apply vehicle and fuel taxes, which may also be having an impact on the quantity of passenger cars sold and their CO2 emissions intensity. Diesel vehicle sales have increased appreciably in many countries over the same period and this study makes a first attempt to examine whether Member State fiscal measures have influenced this phenomenon. This work uses a panel dataset to investigate the relationship between national vehicle and fuel taxes on new passenger car sales and the fleet CO2 emissions intensity in EU15 over a 10-year period. Our results show that national vehicle and fuel taxes have had an impact on passenger car sales and fleet CO2 emissions intensity and that different taxes have disparate effects.
2009	L97	Guerra, Maria Cecilia, and Alberto Zanardi, eds. 2009. <i>La finanza pubblica italiana: Rapporto 2009 (The Italian Public Finance: 2009 Report)</i> , Studi e Ricerche 585. Bologna: Societa editrice il Mulino. Thirteen Italian-language papers review and evaluate Italy's main public finance policies during the year 2008 and the first months of 2009 and present an in-depth analysis of structural policy issues. Papers focus on fiscal balance; taxation; social security; health care; education; public utilities; and liberalization policies. In-depth analysis papers address the evaluation of the reform of fiscal decentralization recently passed in Italy and investigate a number of specific building blocks of the federalist reform.

2009	P29	Hermelink, Ursula, and Claudia Trentini. 2009. <i>Gender-sensitive Economic Policies in the UNECE Region in the Context of the Economic and Financial Crisis</i> . UNECE, ECE Discussion Papers Series: 2009_3 . Gender equality is a basic human right and is as such a part of the social policy framework. At the same time, it is a multi-faceted concept with its cultural, social, legal, political and economic dimensions and interrelations. The prevalent practice in most countries illustrates that traditionally, macroeconomics and gender equality have been considered as two distinct policy areas that are independently shaped and carried out by different authorities. However, this approach fails to acknowledge the numerous interlinkages between both areas. Indeed, it is in the interest of both gender equality advocates and economic policymakers to closely cooperate. On the one hand, economic policies have an effect on gender equality through their potential to rebalance economic opportunities for both men and women and by influencing the incentive structure of economic agents; on the other hand, gender equality has an impact on the economy, for example through changes in labour force participation and the full use of human capital. This paper presents the interplay between these two policy areas highlighting mechanisms through which they influence each other, both under a structural--or long-term--perspective and in the context of the current economic crisis. The concluding recommendations are primarily directed to national decision-makers but also to international organizations, particularly financial institutions which influence national decision-making in the economic field.
2009	R20	Baker, Dean. 2009. <i>The Housing Crash Recession and the Case for a Third Stimulus</i> . Center for Economic and Policy Research (CEPR), CEPR Reports and Issue Briefs . This paper makes the case for a third stimulus package to in the face of economic indicators signaling that the economy is in a deeper downturn than was expected based on previous projections. Specifically, the report calls for an employer tax-credit for extending health care coverage and another per worker employer tax credit for increasing paid time off from work. The author also makes the case for a housing policy centered on the stabilization of prices in non-bubble

Year	DE	Title and Abstract
		and deflated markets rather than applying the same efforts on markets that remain at bubble inflated levels. Finally, the paper argues that the dollar must be allowed to fall in order to adjust trade imbalances that are compounding the U.S. economic crisis caused by the collapse of the housing market.
2010		
2010	B53	Thornton, Mark. 2010. "Hoover, Bush, and Great Depressions." <i>Quarterly Journal of Austrian Economics</i>, 13(3): 86-100. Rothbard (1963) provides a compelling explanation of the Great Depression. He used the Austrian business cycle theory to show that the inflationary policies of the Federal Reserve caused a boom in the economy of the 1920s that led to a bust in 1930. He then employed the Austrian theory of interventionism to show that Hoover's policies were highly interventionist and caused the depression to be "great." The combination of theories can be used to explain the stagflation of the 1970s, Japan's lost decade of the 1990s, and the current economic crisis, which is now the longest contraction since the Great Depression. Like Hoover, George W. Bush had a reputation as an advocate of laissez faire policy. However, he presided over a massive expansion in the size of government and deployed highly interventionist policies to address the crisis.
2010	B53	Luksic, Igor. 2010. "On the Business Cycle and the Failure of the Welfare State: Austrian Explanation." <i>Montenegrin Journal of Economics</i>, 6(12): 43-51. By addressing the consequences of the ongoing crisis as well as the stimulus packages implemented by governments it appears that the time is near to start reexamining the whole approach to the economic system. The concept of the welfare state has been profoundly shaken. Fundamental theory outlaid by the classical economics and the Austrian school are still very much relevant, as the need to face structural misbalances closely related to high public expenditures grows. The issues some EU member states have with the state of their public finances cannot emphasise that challenge enough. Though certain state functions keep their legitimacy it takes a refreshed definition of state. At the same time, there is a need to revisit economics and the relations between micro and macro aspect as well as to reexamine aggregates such as GDP. It is clear one cannot ignore the need of humans to live in community, but also the fact our decisions are motivated by various reasons and therefore could not be predetermined. Knowledge plays the role of energy that moves market forces keeping entrepreneurs awake. Extinguishing that energy is a safe way to suffocate market forces. On the other hand, it is in the human nature to give strong legitimacy to the institutions of egalitarianism which causes the need to unify different scientific research in order to identify the long term trends. By reaffirming the Austrian business cycle theory and the need to revisit the boundaries of the state's interference into the economy it seems that economics need new energy of thought to invent a new general economics theory. This paper practices the hypothesis that consistent economic policy cannot but encompass rational nutshell of every economic theory in its mission to address the micro and macro characteristics of a concrete economy.
2010	C01 C40	Ali Abbas, S. M., Jacques Bouhga-Hagbe, Antonio Fatas, Paolo Mauro, and Ricardo C. Velloso. 2010. <i>Fiscal Policy and the Current Account</i>. C.E.P.R. Discussion Papers, CEPR Discussion Papers: 7859. This paper examines the relationship between fiscal policy and the current account, drawing on a larger country sample than in previous studies and using panel regressions, vector auto-regressions, and an analysis of large fiscal and external adjustments. On average, a strengthening in the fiscal balance by 1 percentage point of GDP is associated with a current account improvement of 0.2-0.3 percentage point of GDP. This association is as strong in emerging and low-income countries as it is in advanced economies; and significantly higher when output is above potential.
2010	C21	Sinha, Narain. 2010. "Econometric Evaluation of Forecasting Budgetary Transactions with Intercept Correction." <i>Indian Economic Journal</i>, 58(1): 60-76. Available forecasts of fiscal variables are rarely model based; adjustments are often made to arrive at the revision stage. Conventional approach to the theory of economic forecasting based on the result that the conditional expectation, given the available information delivers the minimum mean square forecasting error assuming the data generation process (DGP) known and constant over time, It cannot be applied to budgetary variables, because of frequent shifts in the policy regimes of the national and sub-national governments in a federal set-up as exists in India. Under these circumstances while forecasting of fiscal variables for policy purposes, the main objective ought to be to avoid systematic forecasting errors arising due to deterministic shifts. In the recent literature on forecasting, various methods have been suggested such as intercept corrections, differencing, co-breaking, regime switching models, etc., for improving forecasting accuracies. The major aim in this paper is to evaluate the accuracy of the forecasts obtained using the method of intercept correction in Sinha (2003) in the light of data available for the subsequent period for the Indian economy.
2010	C21	Gaiha, Raghav, Katsushi S. Imai, Ganesh Thapa, and Woojin KANG. 2010. <i>Fiscal Stimulus, Agricultural Growth and Poverty in Asia</i>. Research Institute for Economics & Business Administration, Kobe University, Discussion Paper Series: DP2010-15. Recent debates on a sustainable recovery of the global economy have tended to overemphasise the "savings glut" hypothesis and the unavoidable imperative of higher consumption in China and other emerging Asian countries. That oversaving and not underinvestment is coming in the way of a quicker and more durable recovery is not just simplistic but misleading from a medium-term growth perspective for emerging Asian countries and other developing countries in this region. Drawing upon country panel data for developing countries and a sub-sample of Asian countries during the period 1991 to 2007, the present study makes a case for a bold and coordinated fiscal stimulus, directed to stimulating agricultural and overall growth, and mitigation of poverty and hunger. Our simulations further suggest that poverty reduction is likely to be larger if the fiscal stimulus is directed to social spending in health and education sectors. Indeed, if our simulations of fiscal impacts have any validity, the dire predictions of millions getting trapped in poverty and hunger may turn out to be exaggerated. The prospects of a strong recovery led by fiscal stimulus are thus real and achievable.

2010	C67 D57	Sancho, Ferran. 2010. "Total Fiscal Cost of Indirect Taxation: An Input-Output Approximation for Catalonia." <i>Empirical Economics Letters</i>, 9(9): 875-82. In this note, we quantify to what extent indirect taxation alters prices. We illustrate the methodology using the networked accounting structure of a recent input-output table of Catalonia, a region of Spain, to model price formation. Indirect taxation is considered both from a 'classical' and 'neoclassical' perspective. We show that they yield equivalent results under very basic premises. The neoclassical perspective, however, offers a bit more flexibility to distinguish among different tax figures and hence provide a clearer disaggregate picture of how an indirect tax ends up affecting, and by how much, the cost structure.
2010	E69	Nersisyan, Yeva, and L. Randall Wray. 2010. <i>Does Excessive Sovereign Debt Really Hurt Growth? A Critique of This Time Is Different</i>, by Reinhart and Rogoff. Levy Economics Institute, The Economics Working Paper Archive. The worst global downturn

Year	DE	Title and Abstract
		since the Great Depression has caused ballooning budget deficits in most nations, as tax revenues collapse and governments bail out financial institutions and attempt countercyclical fiscal policy. With notable exceptions, most economists accept the desirability of expansion of deficits over the short term but fear possible long-term effects. There are a number of theoretical arguments that lead to the conclusion that higher government debt ratios might depress growth. There are other arguments related to more immediate effects of debt on inflation and national solvency. Research conducted by Carmen Reinhart and Kenneth Rogoff is frequently cited to demonstrate the negative impacts of public debt on economic growth and financial stability. In this paper we critically examine their work. We distinguish between a nation that operates with its own floating exchange rate and nonconvertible (sovereign) currency, and a nation that does not. We argue that Reinhart and Rogoff's results are not relevant to the case of the United States.

2010	J48	Antonopoulos, Rania, Kijong Kim, Tom Masterson, and Ajit Zacharias. 2010. <i>Investing in Care: A Strategy for Effective and Equitable Job Creation</i>. Levy Economics Institute, The, Economics Working Paper Archive. Massive job losses in the United States, over eight million since the onset of the "Great Recession," call for job creation measures through fiscal expansion. In this paper we analyze the job creation potential of social service-delivery sectors-early childhood development and home-based health care-as compared to other proposed alternatives in infrastructure construction and energy. Our microsimulation results suggest that investing in the care sector creates more jobs in total, at double the rate of infrastructure investment. The second finding is that these jobs are more effective in reaching disadvantaged workers-those from poor households and with lower levels of educational attainment. Job creation in these sectors can easily be rolled out. States already have mechanisms and implementation capacity in place. All that is required is policy recalibration to allow funds to be channeled into sectors that deliver jobs both more efficiently and more equitably.
2010	K11	Arrunada, Benito, and Amnon Lehavi. 2010. <i>Prime Property Institutions for a Subprime Era: Exploring Innovative Models of Residential Development and Finance</i>. Department of Economics and Business, Universitat Pompeu Fabra, Economics Working Papers. This paper breaks new ground toward contractual and institutional innovation in models of homeownership, equity building, and mortgage enforcement. Inspired by recent developments in the affordable housing sector and in other types of public financing schemes, this paper suggests extending institutional and financial strategies such as time and place-based division of property rights, conditional subsidies, and credit mediation to alleviate the systemic risks of mortgage foreclosure. Alongside a for-profit shared equity scheme that would be led by local governments, we also outline a private market shared equity model, one of bootstrapping home buying with purchase options.
2010	K40	Schmitt, John, Kris Warner, and Sarika Gupta. 2010. <i>The High Budgetary Cost of Incarceration</i>. Center for Economic and Policy Research (CEPR), CEPR Reports and Issue Briefs. The United States currently incarcerates a higher share of its population than any other country in the world. We calculate that a reduction in incarceration rates just to the level we had in 1993 (which was already high by historical standards) would lower correctional expenditures by \$16.9 billion per year, with the large majority of these savings accruing to financially squeezed state and local governments. As a group, state governments could save \$7.6 billion, while local governments could save \$7.2 billion. These cost savings could be realized through a reduction by one-half in the incarceration rate of exclusively non-violent offenders, who now make up over 60 percent of the prison and jail population. A review of the extensive research on incarceration and crime suggests that these savings could be achieved without any appreciable deterioration in public safety.

2010	M15	Holstein, Adora, Patrick Litzinger, and John Dunn. 2010. "Optimizing the Use of the Fiscal Stimulus for Health IT in the U.S." <i>Global Journal of Business Research</i>, 4(2): 63-76. The fiscal stimulus of 2009 allocated about \$19 billion over five years to advance the country's push for a nationwide health information network. Information sharing among public health agencies and private health care providers has the potential for reducing public health threats and increasing public access to measures of provider quality. It can also help build and disseminate a database of cost-effective best practices in health care delivery. An analysis of existing evidence on enablers and barriers to adoption and effective use of electronic health records suggest that government intervention is justified. The market system will result in low utilization because of scale economies, externalities, network effect, and a need for national standards to ensure interoperability, privacy, and data security. However, optimal use of the fiscal stimulus requires that financial and technical assistance be targeted on smaller physician practices and independent hospitals. Such assistance must be made conditional on adoption and effective use of a certified, interoperable system. The public health benefits will also be maximized the more health care providers participate in the national health IT network. Thus, in addition to awarding financial incentives, electronic submission of aggregated or de-identified health information must be mandated of all health care providers, not only those that are participants of Federal health programs.
2010	N62	Gordon, Robert J., and Robert Krenn. 2010. <i>The End of the Great Depression 1939-41: Policy Contributions and Fiscal Multipliers</i>. National Bureau of Economic Research, Inc, NBER Working Papers: 16380. This paper is about the size of fiscal multipliers and the sources of recovery from the Great Depression. Its baseline result is that 89.1 percent of the 1939:Q1-1941:Q4 recovery can be attributed to fiscal policy innovations, 34.1 percent to monetary policy innovations and the remaining -23.2 percent to the combined effect of the basic VAR dynamic forecast and innovations in non-government components of GDP. Traditional Keynesian multipliers assume that there are no capacity constraints to impede a fiscal-driven expansion in aggregate demand. On the contrary, we find ample evidence of capacity constraints in 1941, particularly in the second half of that year. As a result our preferred government spending multiplier is 1.80 when the time period ends in 1941:Q2 but only 0.88 when the time period ends in supply-constrained 1941:Q4. Only the 1.80 multiplier is relevant to situations like 2009-10 when capacity constraints are absent across the economy. Two sets of new insights emerge from a review of contemporary print media. We document that the American economy went to war starting in June 1940, fully 18 months before Pearl Harbor. We also detail the bifurcated nature of the 1941 economy, with excess capacity in its labor market but capacity constraints in many of the key manufacturing industries. By July 1941, the American economy was in a state of perceived national emergency.

2010	N92	Fishback, Price V. 2010. <i>U.S. Monetary and Fiscal Policy in the 1930s</i> . National Bureau of Economic Research, Inc. NBER Working Papers: 16477. The paper provides a survey of fiscal and monetary policies during the 1930s under the Hoover and Roosevelt Administrations and how they influenced the policies during the recent Great Recession. The discussion of the causal impacts of monetary policy focuses on papers written in the last decade and the findings of scholars using dynamic structural general equilibrium modeling. The discussion of fiscal policy shows why economists do not see the New Deal as a Keynesian stimulus, describes the significant shift toward excise taxation during the 1930s, and surveys estimates of the impact of federal spending on local economies. The paper concludes with discussion of the lessons for the present from 1930s monetary and fiscal policy.
2010	N96	Kalmanovitz, Salomon, and Edwin Lopez R. 2010. "Las finanzas publicas de la Confederacion Granadina y los Estados Unidos de Colombia 1850-1886. (The Public Finances of the 'Confederacion Granadina' and the 'Estados Unidos de Colombia' 1850-1886. With English summary.)." <i>Revista de Economia Institucional</i> , 12(23): 199-228. This article analyzes the tax revenues of the Colombian central government and those of the federal states between 1850 and 1882. It aims to determine whether political decentralization of revenues and expenditures favored and improved the fiscal sustainability of Colombia during this period. The federalist structure is contrasted with centralized organization and we try to assess which was more favorable for achieving macroeconomic equilibriums at the central and decentralized levels.

2011	A31	Masson, Paul R., ed. 2011. <i>Currencies, Crises, Fiscal Policy, and Coordination</i> , Hackensack, N.J. and Singapore: World Scientific. Fifteen papers, some previously published, explore Paul Masson's scholarship in international money and finance. Papers discuss dynamic stability of portfolio balance models of the exchange rate; exchange rate dynamics and intervention rules; exchange rate regime transitions; explaining the transition between exchange rate regimes; credibility of policies versus credibility of policymakers; gaining and losing exchange rate mechanism credibility--the case of the United Kingdom; contagion--macroeconomic models with multiple equilibria; currency crises, sunspots, and Markov-switching regimes; the normal, the fat-tailed, and the contagious--modeling changes in emerging-market bond spreads with liquidity; fiscal flows in the United States and Canada--lessons for monetary union in Europe; liability-creating versus non-liability-creating fiscal stabilization policies--Ricardian equivalence, fiscal stabilization, and the European Monetary Union; monetary union in West Africa--who might gain, who might lose, and why; international policy coordination in a world with model uncertainty; model uncertainty, learning, and the gains from coordination; and portfolio preference uncertainty and gains from policy coordination.
2011	C14	Knedlik, Tobias, and Gregor von Schweinitz. 2011. <i>Macroeconomic Imbalances as Indicators for Debt Crises in Europe</i> . Halle Institute for Economic Research, IWH Discussion Papers: 12. European authorities and scholars published proposals on which indicators of macroeconomic imbalances might be used to uncover risks for the sustainability of public debt in the European Union. We test the ability of four proposed sets of indicators to send early-warnings of debt crises using a signals approach for the study of indicators and the construction of composite indicators. We find that a broad composite indicator has the highest predictive power. This fact still holds true if equal weights are used for the construction of the composite indicator in order to reflect the uncertainty about the origin of future crises.
2011	C72 Q21	Diss: Delaney, Jason. 2011. Three Essays on the Search for Economic Efficiency. PhD diss. Georgia State University. The chapters of this dissertation examine efficiency failures in three areas of applied microeconomics: experimental economics, public finance, and game theory. In each case, we look at ways to resolve these failures to promote the public good. The first chapter, "An Experimental Test of the Pigovian Hypothesis," looks at two different policies designed to reduce congestion in a common-pool resource (CPR). We present an experiment with training and a simplified decision task and find that subject behavior converges to the Nash prediction over a number of periods. A Pigovian subsidy effectively moves subject behavior to the pre-subsidy social optimum. Finally, we find a significant but non-persistent effect of information provision in moving subjects toward the social optimum. The second chapter, "Apples to Apples to Oranges," looks at efficiency and equity failures across states resulting from public expenditure. This chapter introduces an extension of the Representative Expenditure System that uses regression methods and both state and metropolitan statistical area (MSA) level data, allowing for comparability of input costs, service requirements, and levels of need. The regression-based results are robust across state- and MSA-level formulations, although state-level approaches overestimate need for larger, less populous states. All regression-based results diverge from

Year	DE	Title and Abstract
		previous workload-based approaches. The third chapter, "Evading Nash Traps in Two-Player Simultaneous Games," looks at efficiency failures in two-player simultaneous games. This chapter presents two new concepts: "detente" and "no-initiative," in which players consider their own strategies and other-best-responses. We discuss their efficiency and descriptive properties across a set of simultaneous games.
2011	H89	GNANGNON, Sena Kimm. 2011. <i>The consequences of Fiscal Episodes in OECD Countries for Aid Supply</i> . CERDI, Working Papers: 201122. This paper contributes to the established literature both on the side of fiscal consolidation (for e.g. Alesina and Perotti 1995; Alesina et al. 2010) and that of aid supplies (for e.g. Mosley 1985; Faini, 2006) by investigating the effects of fiscal episodes in OECD donor countries on their aid effort vis-a-vis the developing countries. We use descriptive statistics provided by Alesina and Ardagna (2010) on episodes of fiscal consolidation and stimuli in OECD countries and regression models to perform this analysis. The study is performed on a sample of 19 OECD DAC countries as well as on sub-samples for robustness check and over the period 1970-2007. Overall, the results suggest that the episodes of fiscal consolidation and the size of these fiscal austerity policies in OECD DAC countries lead to the curtailment of aid effort. Whilst during periods of fiscal expansion, aid expenditures increase, the size of these fiscal expansion policies may have an opposite effect. The fiscal austerity measures currently adopted by OECD DAC countries are likely to result in aid shortfalls to developing countries, with these effects likely be higher in the "Like-minded Donor countries."
2011	I13	Diss: Clemens, Jeffrey. 2011. <i>Essays on the Activities of the Public Sector</i> . PhD diss. Harvard University. This dissertation contains a collection of essays in public economics, with contributions to the study of social insurance, fiscal stabilization policy, and the behavior of state governments over the business cycle. The first essay examines the interplay between regulations and public insurance programs in the health insurance market. In the early 1990s, several states strictly regulated premiums and product offerings in the markets where small firms and individuals acquire insurance. Within 3 years of adopting these regulations, private coverage of households with children had fallen an excess of 7 percentage points in the regulated markets relative to equivalent markets in other states (as estimated using the large-group markets within each state as an additional control). Subsequent public insurance expansions covered millions of unhealthy and disabled adults, pregnant women, and sicker-than-average children. During these expansions, private coverage rates rose, on average, by an excess of 7 percentage points in the regulated markets relative to control markets. These recoveries were largest in the markets where public coverage of unhealthy adults expanded most, revealing an important complementarity between regulations and public insurance. The second essay explores the use of state government spending to estimate fiscal policy multipliers. Budget rules and other fiscal institutions generate variation in deficit-financed expenditures that could be ideal for studying fiscal stabilization policy. Alternative sources of variation in sub-national fiscal policy tend to be "windfall" financed, leading them to miss the effects of debt (or expected future tax payments) on current consumption and investment behavior. We explore, but ultimately reject, a multiplier estimation strategy driven by the effect of states' budget rules on their budget-cutting behavior. The third essay studies state government spending over the business cycle. Balanced budgets requirements lead to pro-cyclicality in most spending categories. Extensive reliance on relatively volatile revenue sources exacerbates this volatility. States with strict balanced budget requirements must restore fiscal balance faster than those without, leading to recessions during years in which they face unexpected shocks. These recessions occur disproportionately in areas associated with relatively weak public sector unions.
2011	J46	Afonso, Oscar, and Nuno Goncalves. 2011. "The Portuguese Non-observed Economy." <i>Advances in Management and Applied Economics</i> , 1(2): 23-57. This paper aims to contribute to a better understanding of the volume of the non-observed economy (NOE) in Portugal, by estimating, based on MIMIC models (multiple indicators multiple causes), its path in the period 1977-2008. On the one hand, given the influence of the tax burden, the burden of regulation, and the evolution of the labour market, and on the other hand its impact on monetary, labour market, and production indicators, it is estimated that the weight of NOE as a percentage of official GDP in Portugal has grown from 19% in 1977 to 23% in 2008. In particular, it is observed that after a fall in the period 1977-1982, the NOE showed an upward trend in the subsequent period, which has stabilized at around 21% since 1994. However, from the end of 2007, there has again been an increase. Finally, results show that the growth of NOE in Portugal tends positively to affect the growth of the official economy.
2011	K21	Soliani, Riccardo. 2011. "Antonio Pesenti e la sua "Critica economica". (Antonio Pesenti and His "Critica Economica". With English summary.). <i>Il Pensiero Economico Italiano</i> , 19(1): 117-37. Antonio Pesenti was a prominent Italian economist and politician of the twentieth century, strong opponent of Fascism and Minister and deputy of the Communist Party. In the present paper we deal with "Critica economica", the journal founded in 1946 and directed by him until 1956, when it merged with "Notizie economiche" and "Riforma agraria", giving birth to "Politica ed economia". The paper considers a group of several columns (Nostro paese), useful to understand his opinion on the economic and social situation of Italy in the European and Occidental context. Then we examine a few essays, relevant to explain his theoretical position on monetary policies and international monopolistic competition. Pesenti and other authors debated in the journal the Italian financial and anti-trust policy thoroughly. Two important projects of economic planning, never implemented, were proposed in Italy at the end of the forties and in the fifties: the Piano del lavoro (1949-1950), promoted by CGIL (the Italian Trade Union near the Socialist and Communist Parties), and the "Piano Vanoni" (1954), elaborated by minister Ezio Vanoni; "Critica economica" paid great attention to them. "Critica economica" was very interested in the Socialist world, and Pesenti looked at Socialism as the final stage of the dialectical evolution of Capitalism, not so far in the time. We have chosen to focus on one specific point: the lively controversy about the book <i>Esperienze di economia pianificata</i> by Cesare Dami, which witnesses the different theoretical insight of Pesenti, Dami and others scholars, and gives a few clues as to the atmosphere of that cultural and political community.
2011	K32	CV: Sprohge, Hans, and Julsuchada Sirisom. 2011. "Coal Mining: The Neglected Environmental Threat." In <i>Environmental Taxation and Climate Change: Achieving Environmental Sustainability through Fiscal Policy</i> , ed. Larry Kreiser, Julsuchada Sirisom, Hope Ashiabor and Janet E. Milne, 129-43. 2011	N95	Ozgel, Muharrem. 2011. "Osmanli Devleti'nde Sosyoekonomik Yapisiyla One Cikan Vilayet ve Sancaklarin Kamu Maliyesindeki Yeri ve Onemi (1325-1327/1909-1912). (The Scope and Significance of the Ottoman Administrative Units in the Public Finance with Respect to Their Prominent Socio-economic Characters [1325-1327/1909-1912]. With English summary.). <i>Maliye Dergisi</i> , 0(160): 204-27. In the early 20th century, the Ottoman Empire was comprised of thirty provinces and thirteen counties. In this work, with the data of the period from 1909 to 1912, the position of these administrative units have been analyzed. Per quod, it will pave a new way for the understanding of each province and county's financial status vis a vis the whole system. And it will help explain the significance of public finance. In particular, socioeconomic properties which supported these important financial centers are emphasized. In this way, some charts concerning the population of provinces and counties, geographical territory,

Year	DE	Title and Abstract
		collected revenues, amount of allocations, revenue quotas per capita have been constituted. In addition, taxes are visualised as graphics with respect to their kinds and significance. It is seen that Istanbul, Aydin, Thessaloniki, Beirut, Edirne, and Hudavendigâr stand out as the prominent provinces. On the other hand, Karesi, Bolu, and Quds can be seen featured as the worthy counties. The cardinal reasons why these centers were on the front line can be listed in the following order: geographical location, enjoying trade routes, transportation facilities such as sea and railways, the qualification of agricultural activities, geographical and mortal characteristics, and the presence of natural resources and climate.
2011	O44	Reyes, Javier A., and W. Charles Sawyer. 2011. <i>Latin American Economic Development</i> , London and New York: Taylor and Francis, Routledge. Addresses the economic problems of Latin America throughout its history, including why the continent can be considered to have underperformed, how the various economies function, and future prospects for the region. Discusses Latin America and the world economy; economic growth and Latin America; growth and the environment in Latin America; Latin American economic history; Latin America and primary commodities; import substitution in Latin America; Latin American trade policy; exchange rate policy; financing current account deficits; macroeconomic policy in Latin America; macroeconomic stability; and poverty and inequality.
2011	P32	China's Financial Policy Research Center of Renmin University of China, ed. 2011. <i>Growth without Crisis: China's Modern Financial System</i> , Translated by Mifen Yang and Xiaoqiao Xing, Honolulu and Hong Kong: Enrich Professional Publishing. English translation of 2009 Chinese text. Thirteen papers examine the financial system governing financial growth in China, the fiscal policies that influence the institutional structure and reform, and the theory of the formation of equilibrium exchange rate of the renminbi and the political-economic mechanism of exchange rate reform. Papers discuss fiscal decentralization, local government behavior, and economic growth (Qingwang Guo and Junxue Jian); high-speed growth of taxation in China--tax capacity and tax effort (Guo and Bingyang Lu); tax burden in China--a multiperspective analysis (Guo and Lu); a reinterpretation of the modern financial system--theory and choices based on the reality of China's endowment (Yulu Chen and Yong Ma); the effects and transmission mechanism of China's monetary policy--an analysis based on the structural vector autoregression model (Qiang Qu); China's high monetization (Jie Zhang); the capital fund of China's state-owned banks (Zhang); China's agricultural credit system (Zhang); the renminbi equilibrium exchange rate--theoretical origin and the political economy of the exchange rate (Chen); whether Chinese peasants are credible (Chen and Ma); the abnormal relations between stock market and economic growth--theoretical and empirical evidence based on China (Changyun Wang and Zhiwen Wu); the preference of Chinese listed companies for equity financing--evidence and analysis (Wang and Tong Sun); and backward development of the Chinese bond market--an analysis based on corporate bonds (Haixiao Wang and Qiang Qu).

2011	Q30	Arezki, Rabah, Thorvaldur Gylfason, and Amadou Sy, eds. 2011. <i>Beyond the Curse: Policies to Harness the Power of Natural Resources</i> , Washington, D.C.: International Monetary Fund. Thirteen papers, based on a seminar held by the International Monetary Fund Institute and the Central Bank of Algeria in November 2010, explore the challenges that natural resource-rich countries face in reaping the benefits of resource wealth and consider how to manage these challenges. Papers discuss whether natural resource endowment is a mixed blessing; primary commodities--historical perspectives and prospects; economic diversification in resource-rich countries; finance and oil--whether there is a resource curse; the economics of sovereign wealth funds--lessons from Norway; primary commodity price series--lessons for policymakers in resource-rich countries; sustainable fiscal policy for mineral-based economies; fiscal policy in commodity-exporting countries--stability and growth; how commodity exporters can make fiscal and monetary policy less procyclical; natural resources management and financial stability--evidence from Algeria; copper, the real exchange rate, and macroeconomic fluctuations in Chile; the political economy of reform in resource-rich countries; and terms of trade and growth of resource economies--contrasting evidence from two African countries.
2011	Q34	Miodownik, Dan, and Ravi Bhavnani. 2011. "Ethnic Minority Rule and Civil War Onset: How Identity Salience, Fiscal Policy, and Natural Resource Profiles Moderate Outcomes." <i>Conflict Management and Peace Science</i> , 28(5): 438-58. Using an agent-based computational framework designed to explore the incidence of conflict between two nominally rival ethnic groups, we demonstrate that the impact of ethnic minority rule on civil war onset could be more nuanced than posited in the literature. By testing the effects of three key moderating variables on ethnic minority rule, our analysis demonstrates that: (i) when ethnicity is assumed to be salient for all individuals, conflict onset increases with size of the minority in power, although when salience is permitted to vary, onset decreases as minority and majority approach parity; (ii) fiscal policy--the spending and investment decisions of the minority EGIP--moderates conflict; conflict decreases when leaders make sound decisions, increases under corrupt regimes, and peaks under ethno-nationalist regimes that place a premium on territorial conquest; and lastly (iii) natural resources--their type and distribution--affect the level of conflict which is lowest in agrarian economies, higher in the presence of lootable resources, and still higher when lootable resources are "diffused". Our analysis generates a set of propositions to be tested empirically, subject to data availability.
2011	Y10	Organisation for Economic Co-operation and Development, United Nations Economic Commission for Latin America and the Caribbean, and Inter-American Center of Tax Administrations. 2011. <i>Revenue Statistics in Latin America/Estadísticas tributarias en América Latina: 1990-2009</i> , Paris and Washington, D.C.: Organisation for Economic Co-operation and Development. Presents internationally comparable data on tax revenues for twelve Latin American economies, two of which are OECD members. Covers tax revenue trends, 1990-2009; tax levels and tax structures, 1990-2009; country tables, 1990-2009--tax revenues; and tax revenues by subsectors of general government.

2012	A14	Wray, L. Randall. 2012. "A Meme for Money". Levy Economics Institute, The Economics Working Paper Archive. This paper argues that the usual framing of discussions of money, monetary policy, and fiscal policy plays into the hands of conservatives. That framing is also largely consistent with the conventional view of the economy and of society more generally. To put it the way that economists usually do, money "lubricates" the market mechanism--a good thing, because the conventional view of the market itself is overwhelmingly positive. Acknowledging the work of George Lakoff, this paper takes the position that we need an alternative meme, one that provides a frame that is consistent with a progressive social view if we are to be more successful in policy debates. In most cases, the progressives adopt the conservative framing and so have no chance. The paper advances an

Year	DE	Title and Abstract
		alternative framing for money and shows how it can be used to reshape discussion. The paper shows that the Modern Money Theory approach is particularly useful as a starting point for framing that emphasizes use of the monetary system as a tool to accomplish the public purpose. It is not so much the accuracy of the conventional view of money that we need to question, but rather the framing. We need a new meme for money, one that would emphasize the social, not the individual. It would focus on the positive role played by the state, not only in the creation and evolution of money, but also in ensuring social control over money. It would explain how money helps to promote a positive relation between citizens and the state, simultaneously promoting shared values such as liberty, democracy, and responsibility. It would explain why social control over money can promote nurturing activities over the destructive impulses of our "undertakers" (Smith's evocative term for capitalists).
2012	B59	Elson, Diane. 2012. "The Reduction of the UK Budget Deficit: A Human Rights Perspective." <i>International Review of Applied Economics</i>, 26(2): 177-90. This paper contributes to new thinking in economics by employing a human rights perspective to examine the budget deficit reduction strategy of the UK coalition government, as set out in 2010 in the June budget and October spending review. Focusing on economic and social rights, the paper explains the human rights obligations of governments and key human rights principles. As examples of how they should be applied to examine the deficit reduction strategy, it examines the implications of the policy changes for child poverty and gender equality, and finds that in both cases there is evidence to suggest non-compliance with the human rights obligations of the UK government.
2012	C31	Diss: Kwok, Hon Ho. 2012. Essays on Econometrics and Robust Control. PhD diss. University of Wisconsin. Chapter 1: Identifying Social Interactions by Spectral Decompositions of Matrices This chapter develops new methods for identifying social interactions and a framework that unifies some important existing results, such as in Manski (1993), Graham (2008), Bramoulle, Djebbari, and Fortin (2009), and Blume, Brock, Durlauf, and Ioannides (2011). The methods are based on the spectral decompositions of matrices. The contributions are threefold. First, for Manski's (1993) reflection problem, this chapter offers a method of decomposing endogenous interactions and exogenous (contextual) interactions by the spectral decompositions of social interaction matrices. Second, for the endogeneity problem arising from the presence of unobservable group-level heterogeneity (so that the errors are not orthogonal to the observable exogenous variables), this chapter offers a detailed analysis of differencing methods, which solve this endogeneity problem, and provides a method to minimize information loss from differencing. Third, for the identification problem arising from the absence of observable individual-level heterogeneity (so that there is no instrument for the endogenous interaction terms), this chapter develops an identification method by the spectral decompositions of covariance matrices. Graham's (2008) variance contrast method could be treated as a special case of this method. Chapter 2: Estimating Covariance Matrices with Correlated Disturbances This chapter considers linear regression models where individuals interact in a social network so that the disturbances are correlated and derives a sufficient condition under which the covariance matrices can be consistently estimated. The theory is based on the idea in White (1984, 2001). Chapter 3: Robust Ramsey Taxation under Implementation Lag Uncertainty This chapter develops a robust control theory under implementation lag uncertainty. The theory is applied to a Ramsey taxation problem. Implementation lags refer to the lag polynomials of the control variables. In the Ramsey taxation model, the control variable is the tax rate. The Ramsey planner has an estimate of the implementation lag polynomial. He does not totally trust the estimate and thinks that any lag polynomial close to the estimate could be the true implementation lag polynomial. The closeness is measured by the l2-norm. The policy maker applies the robust control concept of Hansen and Sargent (2008). Robust control refers to maximin decision making. The Ramsey planner assumes that there is a hypothetical adversarial agent minimizes the welfare by choosing a implementation lag polynomial that is close to the estimate in the l2 sense, for a given policy choice. The inter-temporal correlations of the control variable and the exogenous state variables are the sources for the adversarial agent to minimize welfare.
2012	D19	Rosen, Harvey. 2012. <i>Growth, Distribution, and Tax Reform: Thoughts on the Romney Proposal</i>. Princeton University, Department of Economics, Center for Economic Policy Studies., Working Papers: 228rosen.pdf. Governor Romney has proposed a personal income tax reform that would lower marginal tax rates and broaden the tax base. Critics of the proposal have argued that high-income taxpayers would receive a tax cut, and given that the proposal is meant to be revenue neutral, this would inevitably lead to increased taxes for families with low and moderate incomes. Because the Romney proposal does not specify in detail just what tax preferences might be eliminated or scaled back in order to broaden the tax base, much of the debate over it has focused on what provisions would be politically and administratively feasible. While this discussion has been illuminating in some respects, something seems to be missing. Relatively little has been said about the possible effects of the Romney proposal on economic growth. This is curious because increasing growth is the motivation for the proposal in the first place. In this paper, I analyze the Romney proposal taking into account the additional income that might be generated by economic growth. The main conclusion is that under plausible assumptions, a proposal along the lines suggested by Governor Romney can both be revenue neutral and keep the net tax burden on high-income individuals about the same. That is, an increase in the tax burden on lower and middle income individuals is not required in order to make the overall plan revenue neutral.
2012	E16	Andre, Francisco J., M. Alejandro Cardenete, and M. Carmen Lima. 2012. "Using a CGE Model to Identify the Policy Trade-Off between Unemployment and Inflation: The Efficient Phillips Curve." <i>Economic Systems Research</i>, 24(4): 349-69. This paper provides a new reading of a classical economic relation: the short-run Phillips curve. Our point is that, when dealing with inflation and unemployment, policy-making can be understood as a multicriteria decision-making problem. Hence, we use so-called multiobjective programming in connection with a computable general equilibrium (CGE) model to determine the combinations of policy instruments that provide efficient combinations of inflation and unemployment. This approach results in an alternative version of the Phillips curve labelled as efficient Phillips curve. Our aim is to present an application of CGE models to a new area of research that can be especially useful when addressing policy exercises with real data. We apply our methodological proposal within a particular regional economy, Andalusia, in the south of Spain. This tool can give some keys for policy advice and policy implementation in the fight against unemployment and inflation.
2012	F62	Becker, Johannes, May Elsayyad, and Clemens Fuest. 2012. "Auswirkungen der Globalisierung auf die Struktur der Besteuerung. (With English summary)." <i>Perspektiven der Wirtschaftspolitik</i>, 13(1-2): 4-18. This paper reviews theoretical predictions on the likely effect of globalization on tax revenues and tax structures in developed countries. The predictions are then confronted with data from OECD countries. The evidence suggests that, in contrast to wide-held views, globalization only marginally affects tax revenues and structures. Most importantly, while it is often assumed that globalization would undermine national governments' ability to tax mobile businesses, corporate tax revenue has increased over time. Overall, the tax systems in developed countries are highly stable in terms of both revenues and tax structure.
2012	H80	Barnes, Sebastian, David Davidsson, and Lukasz Rawdanowicz. 2012. <i>Europe's New Fiscal Rules</i>. OECD Publishing, OECD Economics Department Working Papers: 972. Europe is putting in place a new system of fiscal rules following the euro area sovereign debt crisis and decades of rising government to debt-to-GDP ratios. These include the so-called "six pack" to upgrade the Stability and Growth Pact to a new Treaty incorporating the "fiscal compact". Much of the discussion about the new rules has been procedural or theoretical. This paper shows what the rules will mean in practice under a realistic medium term scenario

Year	DE	Title and Abstract
		developed by the OECD. In the short term, fiscal consolidation will largely be driven by the current wave of Excessive Deficit Procedures. Only once these commitments are fulfilled will the new system of rules come into action. Although the rules are complex, the central pillar of the new fiscal rules will be the requirement to balance budgets in structural terms. These imply a tight fiscal stance over the coming years for many European countries by comparison with the performance achieved in past decades: almost all countries will have to be as disciplined as the few countries that managed to make meaningful progress in tackling high debt levels in the past. A further tightening of budgetary Medium-Term Objectives is likely in 2012, which will in many cases make the required fiscal stance even tighter. Over the very long term, the rules imply very low levels of debt. The requirements can thus not be considered to be a permanent approach. The methodology to calculate the structural balance has a number of weaknesses and discretion will be needed in implementing the rules.

2012	I25	Dastidar, Sayantan, Sushil Mohan, and Monojit Chatterji. 2012. <i>The relationship between public education expenditure and economic growth: The case of India</i> . Economic Studies, University of Dundee, Dundee Discussion Papers in Economics: 273. The paper reviews the theoretical and the empirical case for public investment in education in India. Though the theoretical literature provides a backing for such a policy, the empirical literature fails to find a robust relation between education expenditure and growth. Expenditure on education is a necessary but not a sufficient condition for growth. It seems that the effectiveness of education expenditure depends on the institutional and labour market characteristics of the economy. The effectiveness of education investments also depends on other factors such as trade openness. Due to these aforesaid factors, we argue that the empirical relation between education expenditure and growth for India has been inconsistent.
2012	J71	CV: Nijkamp, Peter, and Jacques Poot. 2012. "Migration Impact Assessment: A State of the Art." In <i>Migration Impact Assessment: New Horizons</i> , ed. Peter Nijkamp, Jacques Poot and Mediha Sahin, 3-62. New Horizons in Regional Science. Cheltenham, U.K. and Northampton, Mass.: Elgar.
2012	K31	Ramaux, Christophe. 2012. "Persistance de l'Etat social et centralite de la politique economique. (The Persistence of the Welfare State and the Centrality of Economic Policy. With English summary.)." <i>European Journal of Economic and Social Systems</i> , 25(1-2): 113-26. The paper proposes to adopt a broad definition of the social state (welfare state) which includes four components: social protection, regulation of labor relations (labor law, etc.), public services and economic policy supporting activity and employment (fiscal, tax, monetary, industrial, income, etc.). The paper shows the permanence of the social state in the major developed countries despite the neoliberal turn over the last thirty years. Social protection has become rather developed since the 1980s. The regulation of labor relations, which applies to public services, has not disappeared. However, the conclusion is more nuanced for the component of economic policies. This fact confirms the importance of considering this component in order to understand the social state.
2012	L61	Feld, Lars P., Jan Schnellenbach, and Thushyanthan Baskaran. 2012. "Creative Destruction and Fiscal Institutions: A Long-Run Case Study of Three Regions." <i>Journal of Evolutionary Economics</i> , 22(3): 563-83. We analyze the rise and decline of the steel and mining industries in the regions of Saarland, Lorraine, and Luxembourg. Our main focus is on the period of structural decline in these industries after the second world war. Differences in the institutional framework of these regions are exploited to analyze the way in which the broader fiscal constitution sets incentives for governments either to obstruct or to encourage structural change in the private sector. Our main result is that fiscal autonomy of a region subjected to structural change in its private sector is associated with a relatively faster decline of employment in the sectors affected. Contrary to the political lore, fiscal transfers appear not to be used to speed up the destruction of old sectors, but rather to stabilize them.
2012	L66	Elliot, Rosemary. 2012. "Smoking for Taxes: The Triumph of Fiscal Policy over Health in Postwar West Germany, 1945-55." <i>Economic History Review</i> , 65(4): 1450-74. In the postwar period, the West German tobacco industry faced several challenges, not least competition from smuggled Virginia cigarettes. This reflected the Americanization of smoking tastes and threatened domestic tax revenue. The popular preference for 'American blend' cigarettes also hindered trade with Greece and Turkey, suppliers of Oriental tobacco to German manufacturers. The proposed solution was tax cuts to stimulate demand for domestically produced cigarettes. These proposals antagonized welfare groups, who saw tax cuts as a threat to the health of the population. The ensuing debates and settlement shed new light on the liberal smoking policies of postwar West Germany.
2012	N91	Horpedahl, Jeremy. 2012. "Public Finance and the Extent of the Voting Franchise: A Survey of Historical Cases and New Evidence from Early U.S. States." <i>Public Finance and Management</i> , 12(3): 281-97. How does the extent of the voting franchise impact public finance in a democracy? In this paper, I discuss that question from theoretical and historical perspectives. There is no simple relationship between the extent of the voting franchise and public finance, either in the total size of government spending or the allocation of that spending among different functions. Instead, franchise extensions are the product of the interaction of various groups in the polity, and the process by which the franchise extension occurs is a crucial factor in determining the government budget. Evidence from several historical periods is discussed, as well as new evidence from the U.S. states in the early Nineteenth Century.
2012	N94	Shelburne, Robert. 2012. <i>Restoring Stability to Europe</i> . UNECE, ECE Discussion Papers Series: 2012_3. The eurozone is in political and economic crisis. This is due to the inadequate design of the institutional structure of the eurozone and to the current poor implementation of macroeconomic policy. In designing the eurozone, well established principles of economics were ignored and major decisions were based primarily upon political considerations. Thus it was only a matter of time before these defects would become apparent. In addressing the current crisis that has developed policy makers have misdiagnosed the causes of the crisis and implemented solutions that are largely counterproductive to solving it. This paper describes the underlying factors that led to the inadequate design and improper macroeconomic response and explains what will be necessary in order to create an institutional structure and macroeconomic policy framework that can restore economic stability and growth to the region.
2012	Y20	Schafer, Dorothea. 2012. "Financial Transaction Tax Contributes to More Sustainability in Financial Markets." <i>Intereconomics/Review of European Economic Policy</i> , 47(2): 76-83. Against the backdrop of the debate over the introduction of a financial transaction tax (FTT) in the European Union, this Forum is dedicated to the discussion of issues

Year	DE	Title and Abstract
		concerning the implementation and impact of such a tax on the financial sectors of the member states. Dorothea Schafer regards as the main policy goal of an FTT to be the prospect of slowing down the mutually reinforcing and growing trends of an increasing number of derivative products and shorter holding periods. The FTT can therefore make an important contribution to preventing the decoupling of financial markets from the real economy. The paper by Stephan Schulmeister discusses the essential features of a general FTT that will ensure that the more short-term oriented and riskier a transaction is, the greater the effect of the FTT on transaction costs. John Vella identifies some commonly made claims about an FTT which are of questionable foundation and compares the FTT with some alternative taxes on the financial sector. Donato Masciandaro and Francesco Passarelli focus on how an FTT measure aimed at reducing financial systemic risk can cause political distortions, leading to inefficient and ineffective policies. Finally, the paper by Ross Buckley analyses common myths, inaccuracies and untruths about the EU's proposed FTT.
2013		
2013	A23	Vegh, Carlos A. 2013. <i>Open Economy Macroeconomics in Developing Countries</i>, Cambridge and London: MIT Press. Presents a small open economy model and shows how it can be extended to answer many macroeconomic questions that arise in emerging markets and developing economies, particularly those regarding monetary, fiscal, and exchange rate issues. Discusses the basic intertemporal model; capital market imperfections; intertemporal prices; nontradable goods and relative prices; the basic monetary model; the monetary approach to the balance of payments; temporary policy; sticky prices; interest rate policy; optimal fiscal and monetary policy in the open economy; optimal exchange rate regimes; real anchors; stopping high inflation; capital inflows; dollarization; balance-of-payments crises; and financial crises.
2013	C41	Agnello, Luca, Guglielmo Maria Caporale, and Ricardo M. Sousa. 2013. <i>Fiscal Adjustments and Business Cycle Synchronization</i>. CESifo Group Munich, CESifo Working Paper Series: 4505. Using a panel of annual data for 20 countries we show that synchronized fiscal consolidation (stimulus) programmes in different countries make their business cycles more closely linked, especially in the case of fiscal adjustments lasting 2 or 3 years. We also find: (i) little evidence of decoupling when an inflation targeting regime is unilaterally adopted; (ii) an increase in business cycle synchronization when countries fix their exchange rates and become members of a monetary union; (iii) a positive effect of bilateral trade on the synchronization of business cycles.
2013	C80	CV: Cuesta, Jose, and Jorge Martinez-Vazquez. 2013. "Analyzing the Distributive Effects of Fiscal Policies: How to Prepare (Analytically) for the Next Crisis." In <i>Is Fiscal Policy the Answer? A Developing Country Perspective</i>, ed. Blanca Moreno-Dodson, 171-212. Directions in Development: Public Sector Governance. Washington, D.C.: World Bank.
2013	C99	Jorda, Oscar, and Alan M. Taylor. 2013. <i>The Time for Austerity: Estimating the Average Treatment Effect of Fiscal Policy</i>. National Bureau of Economic Research, Inc. NBER Working Papers: 19414. Elevated government debt levels in advanced economies have risen rapidly as sovereigns absorbed private-sector losses and cyclical deficits blew up in the Global Financial Crisis and subsequent slump. A rush to fiscal austerity followed but its justifications and impacts have been heavily debated. Research on the effects of austerity on macroeconomic aggregates remains unsettled, mired by the difficulty of identifying multipliers from observational data. This paper reconciles seemingly disparate estimates of multipliers within a unified framework. We do this by first evaluating the validity of common identification assumptions used by the literature and find that they are largely violated in the data. Next, we use new propensity score methods for time-series data with local projections to quantify how contractionary austerity really is, especially in economies operating below potential. We find that the adverse effects of austerity may have been understated.
2013	D04	Krueger, Anne O. 2013. "Lessons from the Great Recession for Developing Countries." <i>Asian-Pacific Economic Literature</i>, 27(2): 14-24. Many lessons can be taken from the Great Recession and the Euro crisis with respect to both pre-crisis and post-crisis policies. Appropriate measures can reduce the risk of crisis in individual countries, the severity of crises, and the magnitude of needed adjustments. These include an appropriate exchange rate policy (flexibility is highly desirable), ensuring the soundness of the financial system, not allowing expansion of credit at too high a rate, adopting structural fiscal budgeting policies, and avoiding dangerous sovereign debt build-up. On the crisis resolution side, the lesson that stands out is the desirability of decisive and credible action to address the causes of the crisis. The issues that arise when the banking and financial system is weakened in the run-up to crisis are extremely difficult, especially when sovereign debt is unsustainable. Therefore, while the important lesson is to avoid overly expansive credit build-up during good times, in the event of a crisis, it is important that the health of the banks be restored as quickly as possible and that a viable supervision and resolution framework be put in place.
2013	D42	Zanette, Michele. 2013. "L'efficienza relativa delle politiche fiscali regionali. (The Relative Efficiency of Regional Fiscal Policies. With English summary.)" <i>Politica Economica</i>, 29(1): 57-89. Italian regions can stimulate their economies either by reducing the IRAP's tax rate or by increasing the amount of tax deductions. We have shown, using a partial equilibrium model where firms operate in monopolistic competition, that the latter manoeuvre is, in general, relatively more efficient than the former. Therefore, an appropriate mix of the two fiscal policies can increase regional added value without worsening the regional budget. Many different deduction schemes could be implemented. The most efficient policy arise when deductions are proportional to the increase of labour. In the short and in the medium run the relative efficiency of the two fiscal instruments, tax rate and deductions, depends crucially on demand elasticity's value. If this value is high, general conclusions do not hold and a tax rate manoeuvre appears more efficient than a manoeuvre based on deductions. In this case regions face a decreasing Laffer curve. In any case a lump sum deduction should not be used.
2013	F52	Schmeder, Genevieve. 2013. "Le casse-tete economique des depenses militaires. Le cas des Etats-Unis. (The Economic Puzzle in Military Spending: The Case of the United States. With English summary.)" <i>Innovations</i>, 0(42): 17-38. The first part of the paper presents the two main approaches, liberal and Keynesian, of the question of whether, in peacetime, military spending is good or bad for the economy, an issue on which the multiplicity and complexity of the relationship between defense and growth forbids providing a unique answer. The second part examines the case of the United States where, for decades, the two parties sharing power have made military Keynesianism a cornerstone of public policy as well as the national economy. This policy, however, cannot be considered as a sustainable one.
2013	F52	Sun, Lijuan. 2013. "The Role of China's Economic Diplomacy in Post-crisis." <i>International Journal of Diplomacy and Economy</i>, 1(3-4): 248-57. With the 2008 collapse of Lehman Brothers, Europe and the USA have become engulfed by sovereign debt crises, a problem that many felt no longer applied to the advanced economies. The US sub-prime loan crisis caused so much damage to the whole world, resulting in the global economy experiencing a shift of economic power from the advance to newly emerging economies. During the post-crisis years, the US and European countries are still reeling on in different ways to solve the problems, and nearly are thrown into 'Triple Crisis', while China as an emerging economy keeps a rising way in the shadow of the global crisis. Economic diplomacy, as a key link, plays a significant role in China's rising, successfully promoting its economic transition and growth, realising the balance of investment, consumption and export and balance of the different industries. This paper makes

Year	DE	Title and Abstract
		detailed analysis of the specific implementation of China's economic diplomacy in the fields of foreign trade, FDI and fiscal finance, in the view of multilateral mechanism and regional cooperation.
2013	F68	CV: Dagan, Tsilly. 2013. "The Tragic Choices of Tax Policy in a Globalized Economy." In <i>Tax, Law and Development</i> , ed. Yari Brauner and Miranda Stewart, 57-76. Cheltenham, U.K. and Northampton, Mass.: Elgar.
2013	K23	von Arnould, Andreas, and Klaus W. Zimmermann. 2013. "Regulating Government(s) Share: The Fifty-Percent Rule of the Federal Constitutional Court in Germany." <i>European Journal of Law and Economics</i> , 35(1): 1-19. Some numbers in the political sphere seem to be chosen rather arbitrarily. One example might be the rule set out by the Second Senate of the German Federal Constitutional Court in 1995 that the overall tax load on assets must be limited to 50% of the yield on those assets. This rule was understood by many as a general principle for taxation. The article first sketches the socio-political climate under which the rule originated: a rise of neo-liberal thought met with the inability of the political institutions to reform the German welfare state with its ever-growing expenses. The Constitutional Court's intervention is interpreted as a reaction to this stagnation in politics. An analysis from the perspective of Constitutional Law, however, reveals that the 50% rule cannot be convincingly based on the German Basic Law, and instead must be seen as a political move of the Court. But this move did not follow an economic rationality, either; for an optimal government's share can only be determined in relation to the economic performance of a country and not by fixing it generally at a maximum of 50% of GDP. The demise of the 50% rule already began four years later. In 2006, finally, the Senate moved away from the individual rights-based approach of 1995 to a more general assessment, taking also into account an increasingly globalized tax competition. The reason for this clear-cut change in the Court's jurisprudence can be found in a change of the socio-political and institutional parameters, thus witnessing to the effect of the political climate on court decisions. The analysis also shows that the rule was created and abandoned only on the basis of an "introverted" legal discussion, economic arguments hardly playing any role in the process. The new line of the Senate, however, might guarantee for a better integration of economic science into tax policy by exchanging fixed limits for a "discursive" model, demanding from the tax legislator better reasons for higher taxes.
2013	K23	Valle, Victorio, Fernando Pampillon, and Angel Laborda. 2013. "Las reformas pendientes de la economía española. (The Remaining Reforms of the Spanish Economy. With English summary)." <i>Boletín de Estudios Económicos</i> , 68(209): 343-68. The current government reform effort to correct the serious imbalances accumulated by the Spanish economy in the last twenty years, needs to be complemented by other reforms that impulse and ensure a robust and fast solution to the crisis. The article ponders over the objectives that should be pursued reforms, lists those that are still pending, and focuses on three that considers essential: i) the tax position aimed at raising levels of European countries with lower restrictive effects and greater equity in the distribution of the costs of the crisis, ii) to complete labor reform to reverse the temporary employment and active and passive employment policy, and iii) reforming the public administration, especially in areas relating to institutional structure, professionalizing the civil service, and the transparency of its actions.
2013	L44	Boheim, Michael. 2013. "'Überregulierung' als Hemmnis für Wettbewerb und Wirtschaftswachstum. ('Regulatory Overkill' as Barrier to Competition and Economic Growth. With English summary)." <i>Wirtschaftspolitische Blätter</i> , 60(4): 603-20. A lack of competition due to "regulatory overkill" has resulted in a bottleneck in economic growth in Austria. An intensification of competition and a reduction of overshooting regulations would substantially foster economic growth. Independent national measures to foster competition and deregulation to supplement EU-level requirements are necessary. The scope for an Austrian competition and regulatory policy that fosters economic growth is comparably large and could be carried out with little impact on the fiscal budget.
2013	L70	Pincus, Jonathan. 2013. "The Power to Tax, 33 Years Later." <i>Agenda</i> , 20(2): 89-101. The basic puzzle about the power to tax is how to limit the capacity of government to exploit taxpayers, while at the same time not overly hampering the government in going about its useful activities. Standard economics fondly believes that it is giving advice to benevolent despots as to how to collect a given target of tax revenue at the least possible harm to the size of the economic pie. The constitutional political economy approach of Geoff Brennan and Jim Buchanan showed that that very same advice is exactly what the non-benevolent government wants to hear in its efforts to maximise tax revenue. Brennan and Buchanan were concerned about excessive exploitation of taxpayers in the large; standard economics is concerned with second-order small triangles of economic inefficiency; government is concerned about the size of first-order revenue rectangles: and so should we be.
2013	M31	Manoku, Elfrida, and Mimoza Kalia. 2013. "Marketing in the Tax Administration in Albania." <i>Scientific Annals of the "Alexandru Ioan Cuza" University of Iasi</i> , 60(1): 127-38. After the late 1970s, the marketing discipline has known a considerable expansion and application not only in the private sector but also in public or non-profit sector. Currently the debate is focused on how to better integrate the marketing concept and marketing function into the activities of government organizations as means of increasing the effectiveness of the delivery of public policy and citizens satisfaction. Public marketing is a new concept for the Albanian reality and very slowly is entering into the management approach. The aim of this paper is to evaluate how much is known and accepted of the concept of marketing in the Albanian public sector and if this level of acceptance or rejection is reflected in the use of marketing strategies and tactics as instruments of public management.
2013	M40	Isai, Violeta, and Riana Iren Radu. 2013. "Accounting and Fiscal Policy in the Ottoman Empire." <i>Annals of "Dunarea de Jos" University of Galati: Fascicle 1: Economics and Applied Informatics</i> , 0(1): 53-58. The Ottoman Empire was an imperial superpower that manifested its domination in the Mediterranean zone between 1299 and 1922. At the moment of their maximum glory, the Ottomans ruled over three continents, meaning 19.9 million km ² . The tax system applied during 600 years, but also the accounting methods used, prove a remarkable administrative and fiscal organization in the Empire. There were taxes based on Islamic law, but also taxes established by the sultan concerning the salaries of employees and the military campaigns. The necessity of correct evidence of tax collecting and distribution required keeping registers "in stairs", according to an accounting method overtook from the Arabs, named the "Merdiban Method". The method was based on principles available until nowadays. It was applied until the end of 19th century, when it was replaced with the method based on double-entry recording, taken from the West.
2013	O34	CV: Otusanya, Olatunde Julius. 2013. "The Role of Inter-company Transfers of Intangible Assets in Tax Avoidance Practices in Nigeria." In <i>Tax Justice and the Political Economy of Global Capitalism, 1945 to the Present</i> , ed. Jeremy Leaman and Attiya Waris, 181-207. New York and Oxford: Berghahn Books.
2013	P48	Tahir, Sayyid. 2013. "Fiscal and Monetary Policies in Islamic Economics: Contours of an Institutional Framework." <i>Islamic Economic Studies</i> , 21(2): 1-22. This paper summarizes salient features of the existing thinking on fiscal and monetary policies in the Islamic economics literature. It outlines institutional framework for these policies from the Islamic economics perspective. The nature and role of government, in the light of the Shariah principles, are revisited. The general goals for macroeconomic policies are discussed along with separate goals for each of the two policies. The argument is capped with a look at practical considerations in the actual working of both the policies. The following are the main points in the paper. (1) Roles of both the

Year	DE	Title and Abstract
		policies shall be complementary in the context of the overall objectives at the state level. (2) Thrust of both policies would be different from that presently recognized. These conclusions are drawn in the context of the government's role being limited to prudent governance and the society's economic and distributional concerns being addressed as much as possible without adopting the budgetary channel.

2006	B41	Hoover, Kevin D. 2006. "A Neowicksellian in a New Classical World: The Methodology of Michael Woodford's Interest and Prices." <i>Journal of the History of Economic Thought</i> , 28(2): 143-49.
2006	B41	Laidler, David. 2006. "Woodford and Wicksell on Interest and Prices: The Place of the Pure Credit Economy in the Theory of Monetary Policy." <i>Journal of the History of Economic Thought</i> , 28(2): 151-59.
2006	B41	Mehrling, Perry. 2006. "Mr. Woodford and the Challenge of Finance." <i>Journal of the History of Economic Thought</i> , 28(2): 161-70.
2006	B41	Boianovsky, Mauro, and Hans-Michael Trautwein. 2006. "Wicksell after Woodford." <i>Journal of the History of Economic Thought</i> , 28(2): 171-85.
2006	B41	Woodford, Michael. 2006. "Comments on the Symposium on Interest and Prices." <i>Journal of the History of Economic Thought</i> , 28(2): 187-98.
2006	B53	Barnett, William, II, and Walter Block. 2006. "Galloway and Vedder on Stabilization Policy." <i>Quarterly Journal of Austrian Economics</i> , 9(1): 57-81.
2006	D40 L89	Ercolani, Marco G., and Jayasri Dutta. 2006. <i>The Euro-changeover and Euro-inflation: Evidence from Eurostat's HICP</i> . Department of Economics, University of Birmingham, Discussion Papers. Though anecdotal evidence suggests that retail price inflation increased temporarily in January 2002 when Euro notes and coins were introduced, the evidence from official statistics largely refutes this. We test for the presence of a sudden temporary increase in inflation for Euro-changeover countries. We use the countries that did not join the Euro: Denmark, Sweden and the UK; as a control group. Though the results are sensitive to the estimation method, we do uncover weak evidence of a minor increase in aggregate inflation in January 2002 for the countries that did join the Euro. Similar tests for the Restaurant sector find a strong Euro-changeover effect on temporary inflation. Summary tests for 129 other price sub-categories are also discussed.
2006	D50 D52	Dubey, Pradeep, and John Geanakoplos. 2006. <i>Money and Production, and Liquidity Trap</i> . Cowles Foundation, Yale University, Cowles Foundation Discussion Papers: 1574. We prove the existence of monetary equilibrium in a finite horizon economy with production. We also show that if agents expect the monetary authority to significantly decrease the supply of bank money available for short term loans in the future, then the economy will fall into a liquidity trap today.
2006	F20	Adao, Bernardino, Maria Isabel Horta Correia, and Pedro Teles. 2006. <i>On the Relevance of Exchange Rate Regimes for Stabilization Policy</i> . C.E.P.R. Discussion Papers, CEPR Discussion Papers: 5797. This paper assesses the relevance of the exchange rate regime for stabilization policy. This regime question cannot be dealt with independently of other institutions, in

Year	DE	Title and Abstract
		particular how fiscal policy is designed. We show that once fiscal policy is taken into account, the exchange rate regime is irrelevant. This is the case independently of the severity of price rigidities, independently of asymmetries across countries in shocks and transmission mechanisms and regardless of the incompleteness of international financial markets. The only relevant condition is labour mobility. The immobility of labour across countries is a necessary condition for our results.
2006	F55	Christl, Josef. 2006. "Regional Currency Arrangements: Insights from Europe." <i>International Economics and Economic Policy</i> , 3(3-4): 209-19. This paper focuses on the requirements and features of a successful monetary union on the basis of the optimum currency area theory, the "logical roadmap" for integration as proposed by Balassa as well as the economic and institutional framework of the European Economic and Monetary Union (EMU). The analysis suggests that monetary union is contingent upon high economic integration and strong political commitment. However, political union is not an ex-ante requirement. Outside factors such as systemic shocks and globalization seem to speed up the pooling of sovereignty in the economic domain. A firm commitment to stability-oriented monetary and fiscal policies is a precondition for gaining credibility and trust within and outside a monetary union. Last, but not least, convergence criteria, fiscal rules and strong institutions are necessary to help ensure and monitor the participants' compliance. However, the European experience is not a blueprint for regional integration that can be directly and entirely applied to other regions.
2006	F55	CV: Begg, Iain. 2006. "Is Full Participation in the EMU Likely to Favor or Slow Real Convergence?." In <i>Living Standards and the Wealth of Nations: Successes and Failures in Real Convergence</i> , ed. Leszek Balcerowicz and Stanley Fischer, 365-91. Cambridge and London: MIT Press.
2006	G31	Vagliasindi, Pietro A., Giovanni Verga, and Pasquale Cirillo. 2006. "Mercato del credito e imprese in un modello con agenti eterogenei. (With English summary)." <i>Rivista Internazionale di Scienze Sociali</i> , 114(3): 459-90. Recent economic literature indicates that imperfections in the credit market can amplify business fluctuations causing financial fragility. Starting from the framework of Greenwald and Stiglitz (1993) and Delli Gatti et al. (2005), we make a more careful model of the banking sector in Italy and its impact on firms' investment behaviour in an economic model with heterogeneous agents. We focus on the productive sector, considering mainly risk neutral firms, facing capital increasing adjustment costs. One of our aims is to comprehensively examine all incomes from capital in a static equilibrium, in order to consider the corporate and individual levels in a unitary framework. In doing so, we take a first step towards building an operational micro-simulation model, which will allow us to replicate the main empirical evidence of the credit market and provide useful and concrete policy recommendations on monetary and fiscal systems and policies.
2006	K42	CV: Holmes, Jennifer S., and Sheila Amin Gutierrez de Pineres. 2006. "Corruption: Is Dollarisation a Solution?." In <i>Institutions, Globalisation and Empowerment</i> , ed. Kartik C. Roy and Jorn Sideras, 130-47. Cheltenham, U.K. and Northampton, Mass.: Elgar.
2006	L89	THE SAME AS D40 Ercolani, Marco G., and Jayasri Dutta. 2006. <i>The Euro-changeover and Euro-inflation: Evidence from Eurostat's HICP</i> . Department of Economics, University of Birmingham, Discussion Papers.
2006	O31	Conway, Patrick. 2006. "The International Monetary Fund in a Time of Crisis: A Review of Stanley Fischer's IMF Essays from a Time of Crisis: The International Financial System, Stabilization, and Development." <i>Journal of Economic Literature</i> , 44(1): 115-44. Stanley Fischer was deputy managing director of the IMF from 1994 to 2001 and, perhaps more than any other individual, he personifies the international "rapid response" to financial crises in the 1990s. This book is a collection of essays written during his tenure at the IMF; taken together, the essays represent the strongest and most logical defense of IMF initiatives in the 1990s in print. My review essay comprises six parts. In parts 2 through 4, I provide an overview of Fischer's arguments in three central areas of contention: stabilization policy, the impact of IMF programs on poverty, and the IMF's anticipation of and response to international financial crisis. I then compare Fischer's arguments to those raised by the IMF's critics during that period. The controversial issues of these parts can be resolved only through empirical investigation but, on the issues of greatest importance from the financial crises of the 1990s, both Fischer and the IMF's critics make logically consistent arguments with little empirical support. In part 5, I review the recent empirical literature to illuminate what evidence has been found in support of--or counter to--the assertions of Fischer and the IMF's critics. Part 6 provides conclusions and suggestions for follow-on empirical research.
2007		
2007	B50	Hein, Eckhard, and Achim Truger, eds. 2007. <i>Money, Distribution and Economic Policy: Alternatives to Orthodox Macroeconomics</i> , New Directions in Modern Economics. Cheltenham, U.K. and Northampton, Mass.: Elgar. Eleven papers explore alternative approaches to macroeconomics and economic policy analysis, developing a critical view of modern orthodoxy. Papers discuss the Cambridge approach to economics; heterodox economics--a common challenge to mainstream economics; elements of a monetary theory of production; the monetary circuit approach--a stock-flow consistent model; what drives profits--an income-spending model; wages and aggregate demand--an empirical investigation for France; new institutions for a new economic policy; structural reforms and macroeconomic policy--the example of Germany; theories of fiscal policies and fiscal policies in the European Monetary Union; the link between fiscal and monetary policy--lessons for Germany from Japan; and monetary policy, macroeconomic policy mix, and economic performance in the Euro area.
2007	C38	CV: Decressin, Jorg. 2007. "Bank Business Correlations." In <i>Integrating Europe's Financial Markets</i> , ed. Jorg Decressin, Hamid Faruquee and Wim Fonteyne, 156-70. Washington, DC: International Monetary Fund.
2007	F51	Boyce, James. 2007. <i>Public Finance, Aid and Post-Conflict Recovery</i> . Political Economy Research Institute, University of Massachusetts at Amherst, Working Papers. In the wake of violent conflict, a key element of building a durable peace is building a state with the ability to collect and manage public resources. To implement peace accords and provide public services, the government must be able to collect revenue, allocate resources, and manage expenditure in a manner that is regarded by its citizens as effective and equitable. This paper addresses eight key issues related to this challenge. The first four pertain to resource mobilization: (i) How should distributional impacts enter into revenue policies? (ii) How can postwar external assistance do more to prime the pump of domestic revenue capacity? (iii) Should macroeconomic strictures prescribed for economic stabilization be relaxed to foster political stabilization? (iv) How should the benefits of external resources be weighed against their costs? The second four issues relate to the expenditure side of public finance: (i) How should the dynamics of conflict be factored into public spending policies? (ii) Can the pathologies of a 'dual public sector'--one funded and managed by the government, the other by the aid donors--be surmounted by channeling external resources through the government, with dual-control oversight mechanisms to reduce corruption? (iii) How should long-term fiscal sustainability enter into short-term expenditure decisions? (iv) Lastly, is there scope for more innovative solutions to postwar legacies of external debts?

Year	DE	Title and Abstract
2007	H51	Malpass, David. 2007. "Monetary Policy and the Growing Fiscal Imbalance." <i>Cato Journal</i> , 27(2): 219-30. The federal government has made commitments to increase entitlement spending rapidly in coming decades. In particular, Medicare expenditures are scheduled to balloon. My expectation is that these commitments will be met for many years by the current unfunded, pay-as-you-go system rather than being pre-funded, a preferable approach, with marketable investments. The 2005 discussion of personal accounts for Social Security didn't make much progress, nor is any marketable funding expected for the Medicare liability. Based on this assumption of a continuation of business-as-usual in Washington, this article focuses on the coming acceleration in outlay growth, in the context of rapidly growing unfunded entitlement liabilities, will affect monetary policy.
2007	H51	Gokhale, Jagadeesh. 2007. "Is the Fed Facilitating an Unpleasant Fiscal Arithmetic?" <i>Cato Journal</i> , 27(2): 237-59. Is the United States headed for an unprecedented economic disaster? The fact that prominent economists are posing that question says something about what they may be expecting. For example, in the St. Louis Fed's Review, Kotlikoff (2006) argues that the United States is headed for bankruptcy. Federal expenditure commitments on account of massive government entitlement programs are growing larger and becoming less reversible. The traditional perspective on how significant inconsistencies between outstanding government liabilities and the government's future expected budget balances are resolved suggests that higher inflation could be the mechanism by which those two items are realigned with each other.

With English summary.)." <i>Revue de L'OFCE</i> , 0(102): 283-314. This paper reviews the debate on the Stability and Growth Pact. Both empirical and theoretical arguments in favour of the Pact are weak, to warrant a different and plausible (even if extreme) hypothesis: We suggest the view that the Stability Pact is a public social norm, obeyed by countries because of the fear of reputation losses. Our simple model shows that reputation issues may cause the emergence of a stable but inferior equilibrium. Within this framework, the enlargement to more undisciplined countries may worsen the problems posed by the Pact.

2008	E27	Preston, Bruce. 2008. "Adaptive Learning and the Use of Forecasts in Monetary Policy." <i>Journal of Economic Dynamics and Control</i> , 32(11): 3661-81. This paper investigates monetary policy design when central bank and private-sector expectations differ. Private agents learn adaptively; the central bank has a possibly misspecified model of the economy. Successful implementation of optimal policy using inflation targeting rules requires the central bank to have complete knowledge of private agents' learning behavior. If the central bank mistakenly assumes private agents to have rational expectations when in fact they are learning, then policy rules frequently lead to divergent learning dynamics. However, if the central bank does not correctly understand agents' behavior, stabilization policy is best implemented by controlling the path of the price level rather than the inflation rate.

2008	G01	Prascevic, Aleksandra. 2008. "The Return to Keynesianism in Overcoming Cyclical Fluctuations?" <i>Economic Annals</i> , 0(177): 30-58. The problems faced by the American economy in the second half of 2007, which intensified in 2008, have once again asked economic science, and even more so economic policy, questions relating to business cycles--the reasons for cyclical fluctuations, the character of business cycles and, naturally, economic policy measures that can be implemented to alleviate and overcome an economic recession. Since the 1970s, business cycle theories have been intensively developed--ranging from monetary theories, developed within monetarism and the first phase of New Classical Macroeconomics, to the real business cycle theory of New Classical Macroeconomics. Consequently, the triggers for the beginning of a cycle can be monetary (monetary theories) or real in the form of technological shocks (real business cycles). In essence economic policy conducted since the 1970s, has rejected the Keynesian explanations of the functioning of the economic system, and thus the policy of aggregate demand management. However, the measures that are now being implemented in the USA point to a return to Keynesianism. This refers, above all, to attempts to compensate for the inefficiency of monetary policy with fiscal expansion. All three psychological propensities (propensity to consume, propensity to invest and liquidity preference) in Keynes's theory and applied in Keynesian economic policy, are still the significant determinants of monetary and fiscal policies. The return to Keynesianism points to the depth of the crisis faced by the USA, but also confirms the vitality of Keynesian economics and affirms the view that--although Keynes wished to present his theory as being "general"--it is actually the theory of economic depression.

2008	M13	Bergin, Paul R., and Giancarlo Corsetti. 2008. "The Extensive Margin and Monetary Policy." <i>Journal of Monetary Economics</i> , 55(7): 1222-37. The creation of new firms, referred to as the extensive margin, is a significant but overlooked dimension of monetary policy. A monetary VAR documents that monetary policy has significant effects on firm creation. An analytically tractable model combining sticky prices and firm entry shows that entry alters the transmission of monetary policy innovations, acting much like a type of investment in more standard models. Monetary policy rules that offset the uncertainty of productivity shocks can raise the mean level of entry and thereby welfare, suggesting a new motivation for stabilization policy.

2009	C12 C13	Li, Bing. 2009. <i>On the Identification of Fiscal Policy Behavior</i> . Center for Applied Economics and Policy Research, Economics Department, Indiana University Bloomington, Caepw Working Papers: 2008-026. In the current literature, fiscal policy is usually characterized by a single-equation rule, in which primary surplus is generally defined as a function of lagged government debt and other controlled variables. To apply Ordinary Least Squares (OLS) method on the single-equation rule has been one of the common approaches to identify fiscal policy behavior. From the rational expectations general equilibrium perspective, this paper illustrates that lagged government debt is generally endogenous and the OLS approach suffers from simultaneity bias. Consequently, the OLS-based identification of fiscal policy behavior is unreliable. As a solution, we apply the Generalized Method of Moments (GMM) for estimation and inference. Monte Carlo experiments demonstrate that GMM provides more reliable results than OLS in terms of accuracy of the estimator, size and power. In short, people should be cautious of the existing OLS-based identification results of fiscal policy behavior and the empirical researchers should not consider OLS regression as a reliable tool when trying to identify fiscal policy behavior in the future.
2009	D80	Buti, Marco, Martin Larch, and Fabio Balboni. 2009. "Monetary and Fiscal Policy Interactions in the EMU When Cyclical Conditions Are Uncertain." <i>Empirica</i> , 36(1): 21-44. This paper examines economic policy interactions in the Economic and Monetary Union when the assessment of cyclical conditions in real time is surrounded by uncertainty. On the basis of a simple stylised model it shows that with a Nash-type of interaction different views about the output gap on the side of the policy players--the Council of the European Union, the European Commission, and the European Central Bank--can give rise to excessive activism with policy players pushing economic variables into opposite directions. It argues that the costs of such policy conflicts can be reduced by agreeing on a common assessment of the cycle, by constraining policy variables, and/or by increasing the weight of fiscally conservative institutions. An alternative option to sidestep policy conflicts ensuing from diverging views of the cycle is to take policy decisions sequentially, as is the case in a Stackelberg-type of interaction. The paper shows that for a given misperception of the cycle, the impact on the policy instruments and on output and inflation are generally smaller in the Stackelberg equilibrium as compared to a Nash outcome. Alternative allocations of roles--that is leader versus follower--are discussed and assessed.

2009	H41	Chen, Been-Lon, and Shun-Fa Lee. 2009. "General Fund Financing, Earmarking, Economic Stabilization, and Welfare." <i>Public Finance Review</i> , 37(5): 507-38. Discussion has been made concerning the pros and cons of financing public projects via either earmarking or a general fund. The article studies the desirability of earmarked and general fund financing based on economic stabilization in a two-sector growth model. Regardless of the nature of public goods, earmarked taxes contribute to aggregate stabilization, while general fund financing may be destabilizing and cause fluctuations. The underlying mechanism in favor of earmarked taxes against general fund financing is that general fund financing creates intersectoral externalities and strategic complementarities that are sufficiently large to exert endogenously persistent and recurring fluctuations in aggregate activities in the absence of shocks to fundamentals. Earmarked taxing generates only sector-specific externalities that are too small to exert local indeterminacy. In a calibrated version, we compute the level of long-run welfare, and the results reflect favorably on the use of earmarked taxing.
2009	H68 H10 H11 H18	Baker, Dean, and David Rosnick. 2009. <i>Taming the Deficit: Saving Our Children from Themselves</i> . Center for Economic and Policy Research (CEPR), CEPR Reports and Issue Briefs. Many proponents of conservative fiscal policies talk of the budget deficit as being a matter of intergenerational equality. However, this paper shows the younger generations (and those yet to be born) will contribute more to the deficit than older generations. This analysis uses data from the CBO Long-Term Budget Outlook and the authors' calculations to show that the driving force behind the deficit is our broken health care system and that this should be the focus of the debate.

2009	J30	Baker, Dean, and John Schmitt. 2009. <i>The \$1 Trillion Wage Deficit</i> . Center for Economic and Policy Research (CEPR), CEPR Reports and Issue Briefs. The strong rise in the U.S. stock market since the spring and the return to positive economic growth in the third quarter of this year have created a consensus among economists that the Great Recession is very likely over. Unfortunately, the end of the official recession will have little visible impact on U.S. labor markets until almost 2012. Within that time, this paper estimates that U.S. workers will have lost over \$1 trillion in wages and salaries, \$150 billion more than the 10-year costs of proposed health care reform legislation.
2009	J30	Perez, Javier J., and Jesus Sanchez. 2009. <i>Is there a signalling role for public wages? Evidence for the euro area based on macro data</i> . Banco de Espana, Banco de Espana Working Papers: 0934. Do public sector wages exert pressures on private sector wages, or has private sector a leadership role in wage setting?. This paper tries to isolate the pure signalling effect that one sector might exert on the other by controlling for other determinants of wages (prices, productivity, institutions) for the main euro area economies (Germany, France, Italy and Spain) and the periods 1980-2007 and 1991-2007. It exploits available quarterly information not yet used in the literature, and combine different data sources in the framework of mixed frequencies time series models. The quarterly frequency of our data allows us to check the existence of strong evidence of public wages' leadership, either in conjunction with bidirectional links from the private sector (Germany and Spain) or pure public wage leadership (France in the sample 1991-2007, Italy for within-the-year linkages).

Banco de Espana, Banco de Espana Working Papers: 0924. This paper develops a dynamic general equilibrium model in which the public and the private sector interact in the labor market. Previous studies that analyze the labor market effects of public sector employment and wages have mostly assumed exogenous rules for public wage and public employment. We show that theories that equalize wages with marginal products in the private sector can rationalize the interaction of public and private

Year	DE	Title and Abstract
		sector wages when extended to accommodate a non-trivial government sector/public sector union that endogenously determines public employment and wages. Our model suggests a positive correlation between public and private sector wages. Any increase in tax revenues, coupled with the existence of a positive public-private sector wage gap, makes working in the public sector an attractive option. Thus, a positive neutral productivity shock increases public and private sector wages. More interestingly, even a private-sector specific productivity shock spills-over to the public sector, increasing public wages. These facts lend some support to the wage leading role of the private sector. Nevertheless, at the same time, a positive shock to public sector wages would lead to an increase in private sector wages, via the flow of workers from the private to the public sector.
2009	L10	THE SAME AS B52 CV: Gaffard, Jean-Luc. 2009. "Innovation, Competition, and Growth: Schumpeterian Ideas within a Hicksian Framework." 2009	L92	Visco, Vincenzo. 2009. "I ministri del Tesoro raccontano: Una testimonianza (aprile 2000-giugno 2001). (The Treasury Ministers Relate: An Account [April 2000-June 2001]. With English summary.)." <i>Rivista di Storia Economica, N.S.</i> , 25(2): 167-90. This article recounts the author's experience as Minister of the Treasury from April 25th, 2000 to June 11th, 2001; it reviews the economic and political climate, and the principal developments, of that time. There was then an imbalance between the economic situation, solid and promising after the previous years' recovery, and the political climate, marked by very strong tensions both within the governing and between the government and the opposition. The euphoria of the international stock markets that gave way to crisis when the "new economy" bubble burst is reconstructed. Within the G-7 Italy played a major role in launching "Beyond Debt Relief", promoting international support for the poor countries beyond the remission of debt. On the internal front, the Treasury addressed the organizational aspects of the modernization of government, and pursued the privatization of public enterprises. The historic dissolution of IRI occurred then; the Alitalia crisis developed as KLM withdrew from their alliance, and the ensuing, promising negotiations with Air France were then stopped by the subsequent government. In addition, the Treasury was active in preparing the complex transition from the lira to the euro, but some of its initiatives would be abandoned by the following government.
2009	M41	Stinespring, John Robert, and Brian T. Kench. 2009. "From Crunch to Crisis in the Interbank Lending Market." <i>Journal of Financial Transformation</i> , 0(27): 63-68. This article examines the conditions under which a credit crunch becomes a credit crisis by studying one aspect of the current financial crisis: the month-long turmoil in the interbank loan market. The credit crunch began in 2007 but became a crisis when the bankruptcy of Lehman Brothers on September 15, 2008 created a systemic confidence shock. The resulting panic ended with the U.S. Treasury Department's bank recapitalization on October 14, 2008. We show that the crisis and the subsequent transformation of the interbank loan market can be explained as a prisoner's dilemma in which banks with excess reserves play a game of "loan or no loan" with each other. The initial game simulates the confidence shock and results in a Nash equilibrium where banks choose "no loan" and are made worse off. The second game incorporates governmental efforts to transform the market through the U.S. Treasury's recapitalization program and FASB changes in mark-to-market and risk-based asset pricing. Both current data and historical evidence from the Panic of 1907 indicate that such programs can work to solve asymmetric information problems and revive lending in the interbank loan market.
2009	N27	Almunia, Miguel, Agustin S. Benetrix, Barry Eichengreen, Kevin H. O'Rourke, and Gisela Rua. 2009. <i>From Great Depression to Great Credit Crisis: Similarities, Differences and Lessons</i> . National Bureau of Economic Research, Inc. NBER Working Papers: 15524. The Great Depression of the 1930s and the Great Credit Crisis of the 2000s had similar causes but elicited strikingly different policy responses. It may still be too early to assess the effectiveness of current policy responses, but it is possible to analyze monetary and fiscal policies in the 1930s as a "natural experiment" or "counterfactual" capable of shedding light on the impact of recent policies. We employ vector autoregressions, instrumental variables, and qualitative evidence for a panel of 27 countries in the period 1925-1939. The results suggest that monetary and fiscal stimulus was effective—that where it did not make a difference it was not tried. The results also shed light on the debate over fiscal multipliers in episodes of financial crisis. They are consistent with multipliers at the higher end of those estimated in the recent literature, consistent with the idea that the impact of fiscal stimulus will be greater when banking system are dysfunctional and monetary policy is constrained by the zero bound.
2009	O50	Cordero, Jose Antonio. 2009. <i>The IMF's Stand-by Arrangements and the Economic Downturn in Eastern Europe: The Cases of Hungary, Latvia, and Ukraine</i> . Center for Economic and Policy Research (CEPR), CEPR Reports and Issue Briefs. This paper looks at three countries that have been hard-hit by the world economic recession, and have turned to the IMF for assistance: Hungary, Latvia, and Ukraine. In all of these countries, it would appear that there were more sensible responses to the crisis that would reduce the loss of employment and output, cuts in social services, and political instability that have resulted from the downturn. Instead, the governments' responses to the downturn as well as IMF conditions for assistance have caused additional harm.
2009	O50	Cordero, Jose Antonio. 2009. <i>Costa Rica During the Global Recession: Fiscal Stimulus with Tight Monetary Policy</i> . Center for Economic and Policy Research (CEPR), CEPR Reports and Issue Briefs. This paper shows that, in spite of a reasonably sized fiscal stimulus package, Costa Rica's economy continues on a downward path, partly because fiscal policy is being offset by a tightening of monetary policy. The paper notes that the International Monetary Fund has insisted that Costa Rica's monetary policy remain tight due to worries over inflation targets and a perceived risk of a balance of payments crisis. However, the author notes that the IMF could help prevent a balance of payments crisis through the provision of a credit line of foreign currency, as it has done, for example, in Mexico - a vastly larger economy. The paper also examines the government's macroeconomic policies in recent years, prior to the world recession, to see what alternative policies might have done better.
2009	O51 R20	Baker, Dean. 2009. <i>The Housing Crash Recession and the Case for a Third Stimulus</i> . Center for Economic and Policy Research (CEPR), CEPR Reports and Issue Briefs. This paper makes the case for a third stimulus package to in the face of economic indicators signaling that the economy is in a deeper downturn than was expected based on previous projections. Specifically, the report calls for an employer tax-credit for extending health care coverage and another per worker employer tax credit for increasing paid time off from work. The author also makes the case for a housing policy centered on the stabilization of prices in non-bubble and deflated markets rather than applying the same efforts on markets that remain at bubble inflated levels. Finally, the paper argues that the dollar must be allowed to fall in order to adjust trade imbalances that are compounding the U.S. economic crisis caused by the collapse of the housing market.

2010	H12	Bofinger, Peter, and Stefan Ried. 2010. "A New Framework for Fiscal Policy Consolidation in Europe." <i>Intereconomics/Review of European Economic Policy</i>, 45(4): 203-11. Current developments in Greece make clear that the rules of the European Stability and Growth Pact (SGP) were neither strict enough nor enforced strictly enough. To deal with the ongoing exit from the fiscal crisis and its related phenomena, we propose a new framework for fiscal policy consolidation in Europe. The centrepiece is a European Consolidation Pact to supplement the SGP which would supply loan guarantees in exchange for a fee and stricter budget consolidation measures. The new framework also spells out the details of an orderly government default.
2010	H12	Singh, Sumanjeet. 2010. "Global Financial Crisis and Indian Economy: A Journey from Recession to Recovery." <i>Journal of International Economic Studies</i>, 0(24): 155-84. The effects of the global financial crisis have been more severe than initially forecast. By virtue of globalization, the moment of financial crisis hit the real economy and became a global economic crisis; it was rapidly transmitted to many developing countries. The crisis emerged in India at the time when the Indian economy was already preoccupied with the adverse effects of inflationary pressures and depreciation of currency. The crisis confronted India with daunting macroeconomic challenges like a contraction in trade, a net outflow of foreign capital, fall in stock market, a large reduction in foreign reserves, slowdown in domestic demand, slowdown in exports, sudden fall in growth rate and rise in unemployment. The government of India has been highly proactive in managing this ongoing crisis with a slew of monetary and fiscal measures to stabilize the financial sector, ensure adequate liquidity and stimulate domestic demand. As a result of this combining with many several structural factors that have come to India's aid, India's economic slowdown unexpectedly eased in the first quarter of 2009. The present paper makes an attempt to assess the impact of global financial crisis on the Indian economy and discuss the various policy measures taken by government of India to reduce the intensity of impacts. The paper also highlights recovery of Indian economy from crisis and in the end of paper concluding remarks are given towards.
2010	H12	Hutchison, Michael M., Ilan Noy, and Lidian Wang. 2010. "Fiscal and Monetary Policies and the Cost of Sudden Stops." <i>Journal of International Money and Finance</i>, 29(6): 973-87. This article investigates the effects of monetary and fiscal policies on output growth during sudden-stop balance of payments crisis in emerging markets and developing countries. Sudden stops in capital flows, and subsequent deep recessions, are a frequent occurrence in these countries but there is no professional consensus, and little systematic empirical evidence, shedding light on the macroeconomic policy mix most likely to limit output losses during these episodes. To address this issue, we investigate 83 sudden-stop crisis in 66 countries using a baseline empirical model to control for the various determinants of output losses during sudden stops. We measure the marginal effects of policy on output losses, and find strong evidence that monetary tightening (rise in the discount rate or unsterilized rise in international reserves) and discretionary fiscal contraction are significantly correlated with larger output losses following a sudden stop. Fiscal expansion is associated with smaller output losses following a sudden stop, but monetary expansion has no discernable effect. The macroeconomic policy mix associated with the least output loss during a sudden-stop financial crisis is a discretionary fiscal expansion combined with a neutral monetary policy
2010	H53	Fernandes, Ana Cristina, and Andreas Novy. 2010. "Reflections on the Unique Response of Brazil to the Financial Crisis and Its Urban Impact." <i>International Journal of Urban and Regional Research</i>, 34(4): 952-66. This essay explores the reasons for the reduced negative effects of the 2008 global financial crisis on Brazil and its cities by applying an analysis that connects these urban effects with the national dynamics. Despite substantial variation within the country, reduced impact can be credited to the response to the crisis by the current Lula administration and to features of the country's urbanization process. First, universal redistributive social programmes, together with an enlarged domestic market, better insertion in the global economy, prudential regulation, and a stable fiscal situation, have put the country in a comfortable position to react to the crisis by adopting countercyclical policies. Second, given the advanced urbanization in Brazil, social and active macroeconomic policies have produced decisive and specific effects on the urban fabric. Recent processes of inland urbanization have created new areas of regional and urban dynamics, thus the impact of the crisis on cities has not only been mild, affecting the most industrialized and internationally oriented metropolises hardest, but has also become an opportunity for strengthening urban areas through active macroeconomic and social policies and helping foster a more decentralized national urban network, thereby leading to stronger links between social inclusion and territorial cohesion.

This paper examines inter-provincial consumption risk sharing and intertemporal consumption smoothing across Chinese provinces before and after the 1979 economic reform. Our results indicate that the degree of consumption risk sharing among Chinese provinces is lower than that within the United States and across the national boundaries of OECD countries. On the other hand, the level of consumption smoothing among Chinese provinces is higher than that across OECD or European Union countries, but lower than that in the United States. Moreover, our results show that consumption risk sharing and smoothing in China have deteriorated since the 1979 economic reform. Finally, we show that eliminating consumption fluctuations yields substantial welfare gains, which suggests that stabilization policies are desirable for China.

2010	R10	Cao, Yongfu, Wendy Dobson, Yiping Huang, Peter A. Petri, Michael Plummer, Raimundo Soto, and Shinji Takagi. 2010. <i>Inclusive, Balanced, Sustained Growth in the Asia-Pacific</i>. Instituto de Economia, Pontificia Universidad Catolica de Chile, Documentos de Trabajo: 370. The recovery of the Asia-Pacific from the global economic crisis of 2008-09 is underway but incomplete. Despite encouraging progress, major risks remain, ranging from slow growth and persistent unemployment to reemerging global imbalances and renewed financial volatility. The policies that stopped the economic freefall--massive stimulus and financial bailout packages--were urgent, relatively easy to sell politically, and to a large extent forced by circumstances. This report argues that sustained recovery now requires tackling different problems, including international imbalances among the United States, China, and other economies. U.S. consumers are not likely to drive world demand in the medium term, and the slack will have to be taken up in part by Asian consumption and investment. The early policy responses, successful as they were in averting a larger calamity, were not designed to address longer-term issues, and some are even counterproductive from that perspective.

F. de Groot. 2011. <i>The Crisis Sensitivity of European Countries and Regions: Stylized Facts and Spatial Heterogeneity</i>. Tinbergen Institute, Tinbergen Institute Discussion Papers: 11-071/3. This paper investigates the impact of the recent global recession on European countries and regions. We first present several stylized facts as to the heterogeneous impact of the global recession on individual European countries and regions. We then offer an investigation of three main classes of explanations for spatial heterogeneity in the severity of the crisis. The first is the extent to which countries are integrated in the global economy via financial and trade linkages. A second class of potential explanations is found in differences in the institutional framework of countries. A third possible cause why some countries and notably also regions are more affected than others is differences in their sectoral composition. We show that especially variation in the sectoral composition contributes to the variation in the effects of the current crisis, both at the country level and at the detailed regional level across the EU.

2011	H10	Attinasi, Maria-Grazia, Cristina Checherita-Westphal, and Malte Rieth. 2011. <i>Personal income tax progressivity and output volatility: evidence from OECD countries</i>. European Central Bank, Working Paper Series: 1380. This paper investigates empirically the effect of personal income tax progressivity on output volatility in a sample of OECD countries over the period 1982-2009. Our measure of tax progressivity is based on the difference between the marginal and the average income tax rate for the average production worker. We find supportive empirical evidence for the hypothesis that higher personal income tax progressivity leads to lower output volatility. All other factors constant, countries with more progressive personal income tax systems seem to benefit from stronger automatic stabilisers.

2011	J53	Brandl, Bernd, and Franz Traxler. 2011. "Labour Relations, Economic Governance and the Crisis: Turning the Tide Again?" <i>Labor History</i>, 52(1): 1-22. This article discusses the implications of the current economic crisis for the interaction of economic policy and labour relations. Its structure distinguishes between four phases of economic policy: Keynesianism; the conversion to orthodox economics; economic policy under accelerating market integration; and current crisis management. For each of the phases the impact of economic policy on the involvement of organized interests in public policy, inter- and intra-class relations, the labour-relations institutions, their feedback and performance is discussed. The article concludes that the extent to which coordinated bargaining and its actors enjoy state sponsorship may make the difference between stability and disintegration, and whatever changes will occur, they will increase cross national heterogeneity.

2011	M10	Bansak, Cynthia A., Mary E. Graham, and Allan A. Zebedee. 2011. "The Effects of Gender Composition of Senior Management on the Economic Fallout." <i>Applied Economics Letters</i> , 18(16-18): 1603-07. In this article, we test the proposition that the presence of women in management impacts decision-making outcomes. In particular, we hypothesize that the greater the proportion of women on the senior management team, the lower the degree of risks taken at the firm level. Using data from the US Equal Employment Opportunity Commission (EEOC), the Center for Research in Security Prices (CRSP) and the US Treasury in this study, we create firm-level gender ratios and control for firm size to assess the impact on two separate risk outcome measures. We find some evidence that financial institutions with more women in the senior management team avoided having to accept Troubled Asset Relief Program (TARP) funds, but that the proportion of women executives has no impact on stock return volatility.

With English summary.)." <i>Revista de Economia Politica/Brazilian Journal of Political Economy</i> , 31(1): 56-76. The Second Vargas Administration in Brazil (1951-1954) is commonly associated with the phenomenon of populism. However, based on the models of economic populism, it is clear that the economic policy of the period is not the one shown by those models. Besides, based on this historic experience, it is advocated that there is no incompatibility between developmentalism and the adoption of macroeconomic stability-oriented measures.
2011	O43	Ioannou, Demosthenes, and Livio Stracca. 2011. <i>Have euro area and EU economic governance worked? Just the facts.</i> European Central Bank, Working Paper Series: 1344. This paper examines the out-of-sample forecast performance of sectoral stock market indicators for real GDP, private consumption and investment growth up to 4 quarters ahead in the US and the euro area. Our findings are that the predictive content of sectoral stock market indicators: i) is potentially strong, particularly for the financial sector, and is stronger than that of financial spreads; ii) varies over time, with a substantial improvement after 1999 for the euro area; iii) is stronger for investment than for private consumption; and iv) is stronger in the euro area than in the United States.
2011	P43 P44 P45	Turnell, Sean. 2011. "Fundamentals of Myanmar's Macroeconomy: A Political Economy Perspective." <i>Asian Economic Policy Review</i> , 6(1): 136-53. The serial underperformer of the region, Myanmar's economy is largely without the institutions and qualities necessary to achieve genuine economic growth. This paper explores the fundamentals of Myanmar's economy, from a perspective that emphasizes policy and institutional failure as the principal determinants of the country's present circumstances. The paper explores Myanmar's economy in a multifaceted way, examining concerns over economic growth, public finances, monetary and financial policies, corruption, and international trade. Notwithstanding the change in the form of Myanmar's governing institutions following the elections of November 2010, the paper concludes pessimistically as to the likelihood of meaningful economic reform in the foreseeable future.

2012	B20 G38	Barbera, Robert J., and Gerald Holtham. 2012. <i>ECB Worries/European Woes: The Economic Consequences of Parochial Policy.</i> Levy Economics Institute, The Economics Working Paper Archive. Financial market crises with the threat of a subsequent debt-deflation depression have occurred with increasing regularity in the United States from 1980 through the present. Almost reflexively, when confronted with such circumstances, US institutions and the policymakers that run them have responded in a fashion that has consistently thwarted debt-deflation-depression dynamics. It is true that these "remedies," as they succeeded, increasingly contributed to a moral hazard in US and global financial markets that culminated with the crisis that began in 2007. Nonetheless, the straightforward steps taken by established institutions enabled the United States to derail depression dynamics, while European 1930s-style austerity proved as ineffective as it was almost a century ago. Europe's, and specifically Germany's, steadfast refusal to embrace the US recipe has fostered mushrooming economic hardship on the continent. The situation is gruesome, and any serious student of economic history had to have known, given European policy commitments, that it was destined to turn out this way. It is easy to understand why misguided policies drove initial European responses. Economic theory has frowned on Keynes. Economic successes, especially in Germany, offered up the wrong lessons, and enduring angst about inflation was a major distraction. At the outset, the wrong medicine for the wrong disease was to be expected. What is much harder to fathom is why such a poisonous elixir continues to be proffered amid widespread evidence that the patient is dying. Deconstructing cognitive dissonance in other spheres provides an explanation. Not surprisingly, knowing what one wants to happen at home completely informs one's claims concerning what will be good for one's neighbors. In such a construct, the last best hope for Europe is ECB President Mario Draghi. He seems to be able to speak German and yet act European.

2012	C30	De Giorgi, Giacomo, and Luca Gambetti. 2012. <i>The Effects of Government Spending on the Distribution of Consumption</i>. Unitat de Fonaments de l'Anàlisi Econòmica (UAB) and Institut d'Anàlisi Econòmica (CSIC), UFAE and IAE Working Papers. We study the effects of government spending on the distribution of consumption. We find a substantial degree of heterogeneity: consumption increases at the bottom and falls at the top of the distribution, implying a significant temporary reduction of consumption inequality. The effects of the shock display correlations of around -0.7/-0.9 with the percentage of stockholders within the decile. We interpret the results as in line and yielding support to models of limited participation where, while the Ricardian equivalence holds for rich households, for poor household, with no access to capital markets, the Keynesian multiplier is at work.
2012	C30	De Giorgi, Giacomo, and Luca Gambetti. 2012. <i>Consumption Heterogeneity Over the Business Cycle</i>. Unitat de Fonaments de l'Anàlisi Econòmica (UAB) and Institut d'Anàlisi Econòmica (CSIC), UFAE and IAE Working Papers. We study consumption heterogeneity over the business cycle. Using household panel data from 1984 to 2010 in the US we find that the welfare cost of the business cycle is non-negligible, once agents heterogeneity is taken into account, and sums to about 1% of yearly consumption. This is due to the structure of comovements between the different parts of the consumption distribution, in particular the tails are highly volatile and negatively related to each other. We also find that business cycle fluctuations originating from exogenous financial shocks only hit the top end of the consumption distribution and therefore reduce consumption inequality.
2012	C44	Wingrove, Rodney C., and Ronald E. Davis. 2012. "Manual-Control Analysis Applied to the Money Supply Control Task." <i>Computational Economics</i>, 39(1): 99-111. The recent procedure implemented by the Federal Reserve Board to control the money supply is formulated in the form of a tracking model as used in the study of manual-control tasks. Using this model, an analysis is made to determine the effect of monetary control on the fluctuations in economic output. The results indicate that monetary control can reduce the amplitude of fluctuations at frequencies near the region of historic business cycles. However, with significant time lags in the control loop, monetary control tends to increase the amplitude of the fluctuations at the higher frequencies. The study outlines how the investigator or student can use the tools developed in the field of manual-control analysis to study the nature of economic fluctuations and to examine different strategies for stabilization.

2012	G24	Kensil, Sean, and Kaitlin Margraf. 2012. "The Advantage of Failing First: Bear Stearns v. Lehman Brothers." <i>Journal of Applied Finance</i>, 22(2): 60-76. The collapse of the housing market coupled with the largest government intervention in the economy in US history led to a radical reorganization of the investment banking industry in 2008 culminating in the failure of two major US investment banks: Lehman Brothers and Bear Stearns. This paper examines why Lehman Brothers was forced into bankruptcy, while Bear Stearns received a government bailout. An analysis of market factors and the financial strength of these two firms and their peer group demonstrates that the problems these banks faced were shared throughout the industry, despite the different fates of the five major standalone investment banks. This paper finds the different treatments of Lehman compared to Bear Stearns by both the government and capital markets were not justified given the financial conditions of the companies. Both investment banks were very similar in terms of financial strength, and Bear Stearns was arguably in worse condition. The US government made efforts to broker a solution on behalf of Lehman Brothers, but ultimately chose to allow the firm to fail in order to prevent the spread of moral hazard. Thus, Lehman's failure was caused more by unfortunate timing and the government's desire to discourage moral hazard than by its financial characteristics. Ultimately, it seems Lehman's failure cannot be entirely explained by the firm's own assets or poor decisions, but rather Bear Stearns' advantage of being the first to fail and the government's subsequent decision to prevent the spread of moral hazard.
2012	G24	Nippani, Srinivas, and Kenneth Washer. 2012. "Creditor Nations' Equity Indexes and the U.S. Debt Downgrade." <i>International Journal of Economics and Finance</i>, 4(6): 3-10. On Friday, August 5, 2011 Standard and Poor's rating agency downgraded long-term U.S. Treasury debt from AAA to AA+ for the first time in history. In this study, the impact of this downgrade on world stock markets is examined. We analyze the immediate effect of this downgrade on leading stock indices of 31 nations owning U.S. Treasury debt. We find that the downgrade had a marked effect on the first trading day following the announcement. It truly was a macroeconomic event. We further examine whether return differentials were partially explained by the level of U.S. debt that each country possessed (both on an absolute and relative basis). We find no evidence of this relationship, which suggests equity markets in countries owning considerable Treasury securities suffered no more or less than equity markets in countries with less U.S. Treasury debt.
2012	G24	Hortacsu, Ali, and Jakub Kastl. 2012. "Valuing Dealers' Informational Advantage: A Study of Canadian Treasury Auctions." <i>Econometrica</i>, 80(6): 2511-42. In many financial markets, dealers have the advantage of observing the orders of their customers. To quantify the economic benefit that dealers derive from this advantage, we study detailed data from Canadian Treasury auctions, where dealers observe customer bids while preparing their own bids. In this setting, dealers can use information on customer bids to learn about (i) competition, that is, the distribution of competing bids in the auction, and (ii) fundamentals, that is, the ex post value of the security being auctioned. We devise formal hypothesis tests for both sources of informational advantage. In our data, we do not find evidence that dealers are learning about fundamentals. We find that the "information about competition" contained in customer bids accounts for 13-27% of dealers' expected profits.

2012	H74	Cestau, Dario, Richard Green, and Norman Schurhoff. 2012. <i>Tax-Subsidized Underpricing: Issuers and Underwriters in the Market for Build America Bonds</i>. C.E.P.R. Discussion Papers, CEPR Discussion Papers: 9186. Build America Bonds (BABs) were issued by states and municipalities for twenty months as an alternative to tax-exempt bonds. The program was part of the 2009 fiscal stimulus package. The bonds are taxable to the holder, but the federal Treasury rebates 35% of the coupon payment to the issuer. The stated purpose of the program was to provide municipal issuers with access to a more liquid market by making them attractive to foreign, tax-exempt, and tax-deferred investors. We evaluate one aspect of the liquidity of the bonds--the underpricing when the bonds are issued. We show that the structure of the rebate creates additional incentives to underprice the bonds when they are issued, and that the underpricing is larger for BABs than for traditional municipals, controlling for characteristics such as size of the issue or the trade. This suggests that the bonds are not more liquid, contrary to the stated purpose of the program, or that issuers and underwriters are strategically underpricing the bonds to increase the tax subsidy, or both. Several findings point to strategic underpricing. There is a negative correlation between the underwriter's spread and the underpricing. The underpricing for BABs is quite evident for institutional and interdealer trades, while that for tax-exempts is primarily for smaller sales to customers. Counterfactuals for our estimated structural model also suggest strategic underpricing.

2012	J12	Diss: Yu, Xiangrong. 2012. Essays in Economics. PhD diss. University of Wisconsin. This thesis consists of two self-contained essays in economics. The first essay introduces parent-child interactions into the Beckerian model of human capital. The acquisition of human capital, jointly determined by parental investment and child effort, is an equilibrium outcome of the intergenerational interactions, which is Pareto efficient within the family. This essay shows that the equilibrium output of human capital is not affected by the parental authority over child behavior, which in the spirit is analogous to Becker's (1974) "Rotten Kid Theorem," but is usually lower than the level that maximizes the instantaneous aggregate family welfare. In a family with more than one child, siblings not only compete for parental investments but also directly interact with each other in their effort choices. Exploring these intragenerational connections and their interplay with intergenerational forces, this essay presents a more complete theory of family linkages in the development of human capital and the associated implications for the rise and fall of families. Social interactions among children from different families induce intra-generational feedback effects that are further amplified by intrafamily interactions and accelerate regression towards the mean in the economic status of families. Allowing for endogenous group formation, this essay also characterizes the conditions, which reflect the interplay between family influences and social effects, for the emergence of segregation in equilibrium. Under a linear quadratic specification studied throughout this essay, the notion of social multipliers is generalized to conceptualize the role of parent-child interactions in peer behaviors. The second essay explores frequency-specific implications of measurement error for the design of stabilization policy rules. Policy evaluation in the frequency domain is interesting because the characterization of policy effects frequency by frequency gives the policymaker additional information about the effects of a given policy. Further, some important aspects of policy analysis can be better understood in the frequency domain than in the time domain. In this essay, I develop a rich set of design limits that describe fundamental restrictions on how a policymaker can alter variance at different frequencies. I also examine the interaction of measurement error and model uncertainty to understand the effects of different sources of informational limit on optimal policymaking. In a linear feedback model with noisy state observations, measurement error seriously distorts the performance of the policy rule that is optimal for the noise-free system. Adjusting the policy to appropriately account for measurement error means that the policymaker becomes less responsive to the raw data. For a parameterized example which corresponds to the choice of monetary policy rules in a simple AR (1) environment, I show that an additive white noise process of measurement error has little impact at low frequencies but induces less active control at high frequencies, and even may lead to more aggressive policy actions at medium frequencies. Local robustness analysis indicates that measurement error reduces the policymaker's reaction to model uncertainty, especially at medium and high frequencies.

2012	J45	Glomm, Gerhard, Juergen Jung, and Chung Tran. 2012. <i>Fiscal Austerity Measures: Spending Cuts vs. Tax Increases</i>. Australian National University, College of Business and Economics, School of Economics, ANU Working Papers in Economics and Econometrics. We study the macroeconomic and welfare effects of decumulating government debt in an overlapping generations model with skill heterogeneity and productive and non-productive government programs. Our results are: First, in the small open economy model calibrated to Greece, the spending-based austerity reform dominates the tax-based reform with respect to income effects but not with respect to the welfare effect. A mixed reform combining the tax-based and spending-based measures results in the largest welfare effects of up to 1.8 percent of pre-reform consumption. Second, the welfare effects vary significantly along the transition to the post reform steady state, depending not only on fiscal austerity measures, but also on skill types, working sectors and generations. When consumption taxes adjust the aggregate welfare effects are positive but the current old and middle age generations experience welfare losses while current young workers and future generations are beneficiaries. Third, interactions between fiscal distortions and the risk premium as well as accessibility to international capital markets strongly influence the effects of fiscal austerity. Larger growth and welfare effects are observed when the risk premium is larger than zero and when access to international capital markets is restricted.

2012	K10 K40	CV: Puccio, Laura. 2012. "The Pressures Inflicted by the Financial Crisis on the Euro Area: De Facto Creating an EU 'Economic Government' Despite the Status Quo Maintained in the Lisbon Treaty?." In <i>The Treaty of Lisbon and the Future of European Law and Policy</i> , ed. Martin Trybus and Luca Rubini, 74-96. Cheltenham, U.K. and Northampton, Mass.: Elgar.
2012	K14	Homburg, Stefan. 2012. "Der neue Kurs der Europäischen Zentralbank." <i>Wirtschaftsdienst</i> , 92(10): 673-77. In September 2012, the European Central Bank (ECB) announced its new "Outright Monetary Transactions (OMT)" programme, which entails unlimited purchases of member states' government bonds. Following an idea by George Soros, Goldman Sachs and Citigroup, the ECB intends to sterilise these purchases through the liabilities side of its balance sheet, i.e., through the issuance of ECB bonds. The article analyses this plan and argues that the ECB is introducing a second unlimited European Stability Mechanism (ESM). This clearly violates European law and is likely to be punishable under German criminal law.

2012	N21	Le Maux, Laurent. 2012. "Fractionnements et crises du National Banking System aux Etats-Unis, 1863-1913. (Disruptions and Crises of the National Banking System, United States, 1863-1913. With English summary.)." <i>Revue d'Economie Financiere</i> , 0(105): 25-48. The paper deals with the disruptions of the payment system during the National Banking Era in the United States (1863-1913). First, the Government policy and the Treasury action regarding the monetary regime, on the one side, the banking legislation and the institutional framework, on the other side, are described. Second, the consequences of the rule of issue of national notes on the seasonal movements of banking reserves and interest rates are examined. Third, the paper analyses proposition for reforming the National Banking System and shows how the banking reforms are insignificant. And fourth, let the clearing houses intervene several times in order to solve financial and liquidity crises.
2012	N94	Shelburne, Robert. 2012. <i>Restoring Stability to Europe. UNECE, ECE Discussion Papers Series: 2012_3</i> . The eurozone is in political and economic crisis. This is due to the inadequate design of the institutional structure of the eurozone and to the current poor implementation of macroeconomic policy. In designing the eurozone, well established principles of economics were ignored and major decisions were based primarily upon political considerations. Thus it was only a matter of time before these defects would become apparent. In addressing the current crisis that has developed policy makers have misdiagnosed the causes of the crisis and implemented solutions that are largely counterproductive to solving it. This paper describes the underlying factors that led to the inadequate design and improper macroeconomic response and explains what will be necessary in order to create an institutional structure and macroeconomic policy framework that can restore economic stability and growth to the region.

2013	C33	Mazhar, Ummad. 2013. <i>Transparency and output stability: Empirical evidence. ULB -- Universite Libre de Bruxelles, Working Papers CEB: 13-010</i> . This paper focuses on the empirical link between monetary policy transparency and output volatility. The questions addressed are: (i) Does transparency about policy processes stabilize output? (ii) Do different aspects of transparency differ qualitatively or quantitatively in terms of their effects on output volatility? Controlling for many standard structural sources of output stability, and using a data set of 80 countries over 1998 to 2007, our results show that transparency has a stabilizing influence on output volatility. However, it has less influence on output volatility than other structural sources of stabilization. Further, among the dimensions of transparency we find that operational transparency (covering control errors and macroeconomic disturbances) has the most robust stabilizing effect on output volatility. Whenever significant, political transparency (covering prioritization of objective and institutional arrangements) tends to increase output volatility, whereas other components have insignificant or negligible influence.

This study examines the transmission and response of inflation uncertainty and output uncertainty on inflation and output growth in the UK using a bi-variate EGARCH model. Results suggest that inflation uncertainty has positive and significant effects on inflation before the inflation-targeting period, but that the effect is significantly negative after the inflation-targeting period. On the other hand, output uncertainty has a negative and significant effect on inflation and a positive effect on growth, while oil price rises significantly increase inflation for the UK. Results also indicate that inflation uncertainty significantly reduces output growth before and after the inflation-targeting period. These findings are robust and the generalized impulse response functions corroborate the conclusions. These results have important implications for an inflation-targeting monetary policy, and for stabilization policy in general.

2006	E44 G12 G18	Brounen, Dirk, Peter Neuteboom, and Arjen van Dijkhuizen. 2006. <i>House Prices and Affordability--A First and Second Look Across Countries</i>. Netherlands Central Bank, Research Department, DNB Working Papers. In this paper we analyze the development of house prices for eight different countries over the period 1970-2003. First we look at real house price dynamics of the United States, the United Kingdom, Germany, France, Italy, the Netherlands, Sweden, and Belgium. After discussing the observable similarities and variations in national house prices, we continue by analyzing structural differences in legislation and mortgage markets, which might help us to understand the cross-sectional variation in prices levels and price developments. Next, we construct a comprehensive first-buyer affordability model in which nominal house prices are corrected for household income changes and the net financing costs of mortgage payments. This model grants us a second look on the cross-section of international house price dynamics. We finish our study with first-buyer elasticity tests, which give a first glance on the stability of each price level on the basis of affordability.

2007	J08	CV: Hein, Eckhard, and Achim Truger. 2007. "Macroeconomic Policies, Wage Developments and Germany's Stagnation." In <i>Germany's Economic Performance: From Unification to Euroization</i> , ed. Jens Holscher, 143-66. Anglo-German Foundation series. Houndmills, U.K. and New York: Palgrave Macmillan.
2007	L60	Kuzmin, Franc, and Miroslav Verbic. 2007. "Distorzija cen in place. (Distortion of Prices and the Wages. With English summary.)" <i>Bančni Vestnik</i>, 56(11): 13-17. The article analyzes the effects of distorted trends of consumer prices and producer prices on the wage bargaining process between trade unions and employers' associations in Slovenia. Trade unions underline the trends in consumer prices, while employers' associations emphasize the trends of producer prices. The greater the price distortions, the more difficult is the wage bargaining process; either because of deterioration of the economic situation of the firms or due to the relative lagging of real wages in manufacturing behind average real wage in other industries. Empirical analysis has shown us that neither of the two negotiating parties fulfilled its desired aim fully; both were satisfied with roughly half of the possible proceeds of the negotiating process.
2007	O34	Fumagalli, Andrea, and Stefano Lucarelli. 2007. "A Model of Cognitive Capitalism: A Preliminary Analysis." <i>European Journal of Economic and Social Systems</i>, 20(1): 117-33. The aim of this paper is to present a first theoretical macro-modelling of cognitive capitalism, by utilizing the French regulation theory approach. With regard to the supply side analysis, we shall emphasize the role played by productivity dynamics: it is mainly affected by two types of dynamics: scale economics, based on learning processes and network activity. Turning to demand-side aspects, aggregate demand takes in account also the role played by distribution effects of financial markets, which operates as a distorsive income multiplier. As, on the one side, it depends upon the trade-off between learning processes diffusion and intellectual property rights and, on the other, upon income polarization (due to precariousness and limited access to capital gains) and demand growth stability. The stability of the system cannot be guaranteed. The need for new rules concerning income distribution process (i.e. basic income policy) will be taken in consideration.
2007	Q43 Q48	Hartono, Djoni, and Budy P. Resosudarmo. 2007. <i>The Economy-wide Impact of Controlling Energy Consumption in Indonesia: An Analysis Using a Social Accounting Matrix Framework</i>. Australian National University, Economics RSPAS, Departmental Working Papers. Escalating oil prices and the need to control carbon emissions sound the alarm for Indonesia to reduce or be more efficient in its energy use. To create an incentive for society to be more energy efficient, they need to understand the full consequences of adopting more efficient energy use strategies toward their incomes. This paper aims to analyse the impact on the economy of energy policies aiming to reduce and to improve the efficiency of energy use, particularly on the income of various household groups. This paper will, first, construct a Social Accounting Matrix for Indonesia with detailed energy sectors and, second, utilise various multiplier analyses to observe and understand the impact of these energy policies.
2008		
2008	B25	Pressman, Steven, and Richard P. F. Holt. 2008. "Nicholas Kaldor and Cumulative Causation: Public Policy Implications." <i>Journal of Economic Issues</i>, 42(2): 367-73. This paper shows how cumulative causation supports Kaldor's main policy proposals. Kaldor advocated an expenditure tax to encourage savings, which would lead to technological advancement, productivity growth, income growth, and more savings. Second, Kaldor argued that tax policy should favor the manufacturing sector. Because productivity growth is greater there, this would lead to greater aggregate productivity growth and income growth, which increases the demand for manufactured goods and leads to a virtuous cycle of growth and improved living standards. Finally, Kaldor used cumulative causation arguments against monetarism and to support an incomes policy to stop the inflationary wage-price spiral.
2008	D02	Padovano, Fabio, and Roberto Ricciuti, eds. 2008. <i>Italian Institutional Reforms: A Public Choice Perspective</i>. New York: Springer. Twelve papers examine the evolution and political and economic impact of recent changes to the Italian institutional framework. Papers discuss pressure on the Bank of Italy--evidence using a Taylor rule; a simulative assessment of the Italian electoral system; whether the Italian public finances converged to European standards after the European Monetary Union; whether the income policy agreements of 1992-93 in Italy are still valid--toward a theory for the optimal design of the "social pact" in the European Monetary Union; laws and legislature size in Italian regions--which will be the effect of an increase in the number of legislators; setting house taxes by Italian municipalities--what the data say; how institutions shape policymaking--the transition

Year	DE	Title and Abstract
		from parliamentarism to presidentialism in Italian local governments; thirty years of reform to budget rules in Italy--an econometric evaluation; the "demand for justice" in Italy--civil litigation and the judicial system; the creation of independent authorities in Italy; the regional organization of hospital care in Italy--the effects of asymmetry of information and soft budget constraint rules; and the channeled Italian voters.
2008	N22	CV: Widmaier, Wesley W. 2008. "Incomes Policies and the U.S. Commitment to Fixed Exchange Rates, 1953-1974." In <i>Orderly Change: International Monetary Relations since Bretton Woods</i> , ed. David M. Andrews, 139-54. Ithaca and London: Cornell University Press.
2008	P11	Rancan, Antonella. 2008. "The Italian 'Metaphysical Adventure' of Economic Planning as Seen through the Italian Newspapers (1962-1964)." <i>History of Economic Ideas</i>, 16(1-2): 133-54. The paper reconstructs the broad economic planning debate of the early nineteen-sixties through the more representative Italian newspapers. As it appears evident from my review, the obstacles that economic planning met were due mainly to exogenous factors such as the weakness of the political forces with respect to the important political and economic reforms they had announced with the first Centre-Left government, and the unexpected change in the economic conditions which shifts the political attention from the structural reforms to the anti-conjunctural policy. The political and economic debate involved three significant and strictly related moments, which represented the crucial, controversial questions: the interpretations of economic planning, the relation between long and short-term policy, and the prevailing version of the incomes policy as an instrument to restore the fifties development model.
2008	P11	Cristiano, Carlo. 2008. "Changing Views on Incomes Policy and Economic Planning: Pasquale Saraceno and the Italian Experience, 1962-1964." <i>History of Economic Ideas</i>, 16(1-2): 155-69. The idea of incomes policy as a necessary condition for economic planning is sometimes dated back to the La Malfa Note of May 1962, a view which finds confirmation in the papers of Pasquale Saraceno who co-authored the Note, chaired the Experts' division of the CNPE (Commissione Nazionale per la Programmazione Economica, National Committee for Economic Planning) and drafted its Final Report. However, the Saraceno papers also bear witness to the fact that this idea underwent a process of significant modification before it was labelled with its proper name. The embryo of an incomes policy outlined in the Note consists of a control of the growth of nominal wages, to be implemented in agreement with the Unions, associated with an increased supply of public goods and a wide programme of social reforms and redistribution. During the CNPE meetings, Saraceno argued for a short-term anti-cyclical policy intended to keep the rate of growth of the 'Miracle' years stable. Finally, in the Report, when the rapid and unexpected downturn in the economy became more and more perceptible, Saraceno pointed out the need to bring the process of capital accumulation and investment "back to the preceding condition, in which the rate of savings sufficed for the needs of economic planning".
2009		
2009	E01 G01	CV: Atkinson, Tony. 2009. "A Stress Test for the Welfare State." In <i>Aftershocks: Economic Crisis and Institutional Choice</i> , ed. Anton Hemerijck, Ben Knapen and Ellen van Doorne, 207-11. Amsterdam: Amsterdam University Press; distributed by University of Chicago Press.
2009	E13	Setterfield, Mark. 2009. "Macroeconomics without the LM Curve: An Alternative View." <i>Cambridge Journal of Economics</i>, 33(2): 273-93. This paper develops a 'fully articulated' post-Keynesian alternative to the 'New Consensus' macroeconomic model, based on explicitly post-Keynesian hypotheses about the inflation process, the income-generating process and the appropriate conduct of monetary policy. The paper demonstrates how the equilibrium configuration of this model can be manipulated by non-monetary policy interventions, including fiscal policy and incomes policy. One (perhaps surprising) result that emerges from the analysis is that in the context of the proper policy environment, inflation targeting can have a positive impact on real economic performance.
2009	E20 E60 I10 I18 J20 J22	Baker, Dean. 2009. <i>Job Sharing: Tax Credits to Prevent Layoffs and Stimulate Employment</i>. Center for Economic and Policy Research (CEPR), CEPR Reports and Issue Briefs. The unemployment rate is expected to average 10.2 percent for 2010, 9.1 percent for 2011, and 7.3 percent for 2012. With this in mind, this Issue Brief describes a job sharing tax credit, designed to provide a quick and substantial boost to the economy. It would use tax dollars to pay firms to shorten the typical workweek, while keeping pay constant. This should cause employers to want to hire additional workers. A rough estimate of the impact of this tax credit is between 1.3 and 2.7 million jobs created.
2009	E20 E60 I10 I18	Sherman, Matt. 2009. <i>More Budget Belt-Tightening Means More Job Losses for States</i>. Center for Economic and Policy Research (CEPR), CEPR Reports and Issue Briefs. This paper looks at the problem of state budget shortfalls during the recession and calculates the number of jobs that would be lost (nationally and by state) if states utilize pro-cyclical spending cuts in an attempt to balance their budgets. This is an update to an earlier paper from December 2008, "Will Workers Survive State Budget Belt-Tightening?"
2009	E20 E60 I10 I18	Sherman, Matt, and Nathan Lane. 2009. <i>Cut Loose: State and Local Layoffs of Public Employees in the Current Recession</i>. Center for Economic and Policy Research (CEPR), CEPR Reports and Issue Briefs. In the current recession, millions of Americans have lost their jobs. Unemployment has increased nationwide to levels not witnessed since the 1980s. This issue brief tallies more than 110,000 jobs that have been shed from state and local governments in the last two years and breaks them down by state (and metropolitan area where available). Without the stimulus passed in February of this year, there would have been many more layoffs at the the state and local level.
2009	E20 E60 I10 I18	Baker, Dean, and Rivka Deutsch. 2009. <i>The State and Local Drag on the Stimulus</i>. Center for Economic and Policy Research (CEPR), CEPR Reports and Issue Briefs. This report shows that the \$787 billion included in the 2009 ARRA will not have as much of an immediate effect on the economy as initially anticipated. After subtracting the annual AMT patch and accounting for state level spending and tax cuts, the full effect of federal stimulus will equal a little more than 1 percent of GDP a year, falling far short of what is needed to re-ignite the economy. While the 2009 recovery act was a vital first step towards restoring the nations economic foundation, this paper puts some perspective on the immediate effects of the stimulus.
2009	E20 E60 I10 I18	Baker, Dean. 2009. <i>Pay for Play? Tax Credits for Paid Time Off</i>. Center for Economic and Policy Research (CEPR), CEPR Reports and Issue Briefs. Economists are increasingly coming to the recognition that the current downturn is likely to be longer and more severe than they had expected at the time the last stimulus package was approved in February. As a result, there is likely to be interest in additional stimulus in order to boost the economy and lower the unemployment rate. This paper briefly outlines a method for Congress to quickly boost demand in the economy, while at the same time promoting important public ends: an employer tax credit for paid time off. This paid time off can take the form of paid family leave, paid sick days, paid vacation, or a shorter workweek. This tax credit can both provide short-term stimulus and also provide an incentive to restructure workplaces in ways

Year	DE	Title and Abstract
		that are more family friendly. It is possible that many workplaces may leave in place changes made to take advantage of this tax credit even after it has expired.
2009	E30 E60	Baker, Dean, and John Schmitt. 2009. <i>The \$1 Trillion Wage Deficit</i> . Center for Economic and Policy Research (CEPR), CEPR Reports and Issue Briefs. The strong rise in the U.S. stock market since the spring and the return to positive economic growth in the third quarter of this year have created a consensus among economists that the Great Recession is very likely over. Unfortunately, the end of the official recession will have little visible impact on U.S. labor markets until almost 2012. Within that time, this paper estimates that U.S. workers will have lost over \$1 trillion in wages and salaries, \$150 billion more than the 10-year costs of proposed health care reform legislation.

2009	E60 J80 J88	Schmitt, John. 2009. <i>Inequality as Policy: The United States Since 1979</i> . Center for Economic and Policy Research (CEPR), CEPR Reports and Issue Briefs. Since the end of the 1970s, the United States has seen a dramatic increase in economic inequality. While the United States has long been among the most unequal of the world's rich economies, the economic and social upheaval that began in the 1970s was a striking departure from the movement toward greater equality that began in the Great Depression, continued through World War II, and was a central feature of the first 30 years of the postwar period. This is not due to chance circumstances but is the direct result of a set of policies designed first and foremost to increase inequality.
2009	E60 H62 H63 H68 I10 I18	Baker, Dean, and David Rosnick. 2009. <i>Taming the Deficit: Saving Our Children from Themselves</i> . Center for Economic and Policy Research (CEPR), CEPR Reports and Issue Briefs. Many proponents of conservative fiscal policies talk of the budget deficit as being a matter of intergenerational equality. However, this paper shows the younger generations (and those yet to be born) will contribute more to the deficit than older generations. This analysis uses data from the CBO Long-Term Budget Outlook and the authors' calculations to show that the driving force behind the deficit is our broken health care system and that this should be the focus of the debate.

2010		
2010	E69	Nersisyan, Yeva, and L. Randall Wray. 2010. <i>Does Excessive Sovereign Debt Really Hurt Growth? A Critique of This Time Is Different, by Reinhart and Rogoff</i> . Levy Economics Institute, The Economics Working Paper Archive. The worst global downturn since the Great Depression has caused ballooning budget deficits in most nations, as tax revenues collapse and governments bail out financial institutions and attempt countercyclical fiscal policy. With notable exceptions, most economists accept the desirability of expansion of deficits over the short term but fear possible long-term effects. There are a number of theoretical arguments that lead to the conclusion that higher government debt ratios might depress growth. There are other arguments related to more immediate effects of debt on inflation and national solvency. Research conducted by Carmen Reinhart and Kenneth Rogoff is frequently cited to demonstrate the negative impacts of public debt on economic growth and financial stability. In this paper we critically examine their work. We distinguish between a nation that operates with its own floating exchange rate and nonconvertible (sovereign) currency, and a nation that does not. We argue that Reinhart and Rogoff's results are not relevant to the case of the United States.
2010	O53 P25 R58	Herd, Richard. 2010. <i>A Pause in the Growth of Inequality in China?</i> . OECD, Economics Department, OECD Economics Department Working Papers: 748. In recent years, policymaking in China has put increasing emphasis on stemming the growth in inequality, which had been fairly steep since the 1980s. Policy action has taken the form of regional development measures and of reforms of various aspects of the social safety net broadly defined. The Western Development Plan has aimed at narrowing the income gap between the sparsely populated and under-developed West and the more prosperous and faster-growing East. The bulk of the expenditure, however, has been on large capital-intensive projects rather than on education and other social spending. More emphasis on education would help reduce the income gap, since human capital is a key determinant of income. Government policies to improve conditions in rural areas nationwide have involved a substantial reduction in the burden of regressive taxes and fees. Welfare assistance has also evolved: a minimum living allowance has been introduced in urban and more recently in rural areas, but it has not reduced poverty that much, not least because of how it is administered. Moreover, the financing of this allowance ought to rely more on national solidarity and its delivery needs to be better co-ordinated with that of other social benefits. A set of new indicators of nationwide inequality, based on household survey data, suggests that overall inequality has ceased to increase in recent years, and may even have inched down. Alternative measures of income inequality across provinces show that, if migration is taken into account, disparities are markedly less, and have tended to decline somewhat in recent years. Even so, geographical inequality remains very high by international standards. It reflects intra-more than inter-provincial differences, pointing to persistent, if diminishing, labour market segmentation.

2012	A20	Weisman, Dennis L., Shane D. Sanders, and Mantobaye Moundigbaye. 2012. "An Instructional Exercise in Price Controls: Product Quality, Misallocation, and Public Policy." <i>Journal of Industrial Organization Education</i> , 6(1). A price control policy has several potential effects upon market welfare. These include deadweight loss, surplus transfer from producer to consumer, misallocative cost, and quality degradation. The present article provides accessible pedagogical models with which to incorporate the former two issues into a welfare analysis of price control. The analysis allows students to form a more complete understanding of price control policies.
2012	C63 D92 G31	Napoletano, Mauro, Giovanni Dosi, Giorgio Fagiolo, and Andrea Roventini. 2012. "Wage Formation, Investment Behavior and Growth Regimes: An Agent-Based Analysis." <i>Revue de L'OFCE</i> , 0(124): 235-61. Using the "Keynes+Schumpeter" (K+S) agent-based model developed, we study how the interplay between firms' investment behavior and income distribution shapes the short- and long-run dynamics of the economy at the aggregate level. We study the dynamics of investment under two different scenarios. One in which investment is fully determined by past profits, and one in which investment is tied to expectations about future consumption demand. We show that, independently from the investment scenario analyzed, the emergence of steady growth with low unemployment requires a balance in the income distribution between profits and wages. If this is not the case, the economy gets locked either in stagnation equilibria, or into growth trajectories displaying high volatility and unemployment rates. Moreover, in the demand-led scenario, we show the emergence of a non-linear relation between real wages and unemployment. Finally, we study whether increasing degrees of wage-flexibility are able to restore growth and unemployment and reduce the volatility in the economy. We show that this is indeed the case only when investment is profit-led. In contrast, in the scenario where investment is driven by demand expectations wage-flexibility has no effect on either growth and unemployment. In turn, this result casts doubts on the ability of wage-flexibility policies to stabilize the economy.

2012	E11	Panigo, Demian Tupac, and Pablo Ignacio Chena. 2012. "Regulationist Macro-models for Developing Countries: An Application to the Argentine New Development Pattern." <i>Revue de la Regulation</i> , 0(11). In this paper we present a regulationist structural macroeconomic model (RSMM) to develop economic forecasts and examine different policy outcomes in Argentina. RSMM main characteristics involve cumulative causation dynamics where income distribution, macroeconomic volatility, credit rationing and productive heterogeneity conjugates to obtain a new instrument to precisely examine key macroeconomic and social variables. Available empirical results indicate: 1) the existence of dynamic increasing returns to scale; 2) the relevance of income distribution for investment, tax collection and public expenditures; 3) the significant influence of macroeconomic volatility on employment generation; 4) the strong effect of investment (positive) on imports and domestic consumption (negative) on exports; and 5) that price dynamics depend on wages and demand factors but also (and predominantly) on external variables and income policies.
2012	E11	Cassetti, Mario. 2012. "Macroeconomic Outcomes of Changing Social Bargains: The Feasibility of a Wage-Led Open Economy Reconsidered." <i>Metroeconomica</i> , 63(1): 64-91. It has been argued, in neo-Kaleckian growth theory, that profit-led growth regimes are more likely in an open economy, at least in the short run. This paper reconsiders this question by developing a macroeconomic model for the medium run where distribution and inflation, caused by conflicting nominal income claims, influence growth. We show that the strict alternative between wage-led and profit-led growth is misguided, and that an expansion of real wages and employment is feasible when enduring incomes policies are established. Hindrance to these policies is reminiscent of the political opposition to permanent full employment envisaged by Kalecki.

2006	A22	CV: Booth, Philip. 2006. "364 Economists and Economics without Prices." In <i>Were 364 Economists All Wrong?</i> , ed. Philip Booth, 88-103. London: Institute of Economic Affairs in association with Profile Books.
2006	E00 N01	Richardson, Gary. 2006. <i>Bank Distress during the Great Depression: The Illiquidity-Insolvency Debate Revisited</i>. National Bureau of Economic Research, Inc, NBER Working Papers: 12717. During the contraction from 1929 through 1933, the Federal Reserve System tracked changes in the status of all banks operating in the United States and determined the cause of each bank suspension. This essay analyzes chronological patterns in aggregate series constructed from that data. The analysis demonstrates both illiquidity and insolvency were substantial sources of bank distress. Periods of heightened distress were correlated with periods of increased illiquidity. Contagion via correspondent networks and bank runs propagated the initial banking panics. As the depression deepened and asset values declined, insolvency loomed as the principal threat to depository institutions.
2006	E40	Kehoe, Patrick, and Varadarajan V. Chari. 2006. <i>Modern Macroeconomics in Practice: How Theory is Shaping Policy</i>. National Bureau of Economic Research, Inc, NBER Working Papers: 12476. Theoretical advances in macroeconomics made in the last three decades have had a major influence on macroeconomic policy analysis. Moreover, over the last several decades, the United States and other countries have undertaken a variety of policy changes that are precisely what macroeconomic theory of the last 30 years suggests. The three key developments that have shaped macroeconomic policy analysis are the Lucas critique of policy evaluation due to Robert Lucas, the time inconsistency critique of discretionary policy due to Finn Kydland and Edward Prescott, and the development of quantitative dynamic stochastic general equilibrium models following Finn Kydland and Edward Prescott.

Year	DE	Title and Abstract
2006	F50	CV; Islam, Iyanatul. 2006. "Neoliberalism and Post-Saddam Iraq: A Global Perspective." In <i>Beyond the Iraq War: The Promises, Pitfalls and Perils of External Interventionism</i> , ed. Michael Heazle and Iyanatul Islam, 156-81. Cheltenham, U.K. and Northampton, Mass.: Elgar.
2006	F54	Ferreira, Manuel Ennes. 2006. "Angola: Conflict and Development, 1961-2002." <i>Economics of Peace and Security Journal</i>, 1(1): 25-29. Can a country achieve its development goals or, at least, its economic growth goals when it faces forty years of war? Angola's case serves as a paradigmatic example to answer this question. From 1961 to 1974, Angolans opposed Portuguese colonial rule by violent, revolutionary struggle. But from 1975 (Angola's independence year) to April 2002 (the date of the last cease-fire), a civil war pitted the ruling MPLA party against the main rebel group, UNITA. Macroeconomic performance differed across these two time-periods. The article explores the influence of internal and external economic and political conditions on Angola's development, under circumstances of war, and speculates on Angola's immediate future. The article argues, in particular, that Angola's elites have used the civil war as an excuse behind which to hide atrocious economic policy.
2006	F55	CV; Begg, Iain. 2006. "Is Full Participation in the EMU Likely to Favor or Slow Real Convergence?." In <i>Living Standards and the Wealth of Nations: Successes and Failures in Real Convergence</i> , ed. Leszek Balcerowicz and Stanley Fischer, 365-91. Cambridge and London: MIT Press.
2006	I30	CV; Nidhiprabha, Bhanupong. 2006. "The Distributive and Macroeconomic Impact of Liberalization in Thailand." In <i>External Liberalization in Asia, Post-socialist Europe, and Brazil</i> , ed. Lance Taylor, 388-416. Oxford and New York: Oxford University Press.
2006	I30	Amann, Edmund, and Werner Baer. 2006. "Economic Orthodoxy versus Social Development? The Dilemmas Facing Brazil's Labour Government." <i>Oxford Development Studies</i>, 34(2): 219-41. It has often been suggested that the trade-off between equity and efficiency can be overcome by achieving both goals sequentially. This article shows how the government of President Lula has tried to follow this rule, by first emphasizing economic orthodoxy, to be followed by measures to achieve more socio-economic equity. With President Lula's administration in the second half of its mandate, our analysis suggests that such a sequence may be difficult to achieve.
2006	J08	CV; Sabethai, Isaac D. 2006. "Greece: The Long Process of Economic and Institutional Convergence." In <i>Living Standards and the Wealth of Nations: Successes and Failures in Real Convergence</i> , ed. Leszek Balcerowicz and Stanley Fischer, 251-67. Cambridge and London: MIT Press.
2006	J11	CV; Azam, Jean-Paul. 2006. "Comment on "Explaining African Economic Growth: The Role of Anti-growth Syndromes," by Augustin Kwasi Fosu and Stephen A. O'Connell." In <i>Annual World Bank Conference on Development Economics 2006: Growth and Integration</i> , ed. Francois Bourguignon and Boris Pleskovic, 67-70. Washington, D.C.: World Bank.
2006	J20	Newman, Katherine S. 2006. <i>Chutes and Ladders: Navigating the Low-Wage Labor Market</i>. New York: Russell Sage Foundation; Cambridge and London: Harvard University Press. Explores whether the poorest workers and families in America benefited from the tight labor markets and good economic times of the late 1990s. Discusses lives in the long run; the best-case scenario; high flyers, low riders, and the "up but not out" club; all in the family; the national picture; streetwise economics; work and welfare in the boom years; dreams deferred--aspirations and obstacles in work and family life; and opening the gates.
2006	K22	Farmer, Karl. 2006. "Germany's Social Market Economy and the New Systems Competition." <i>Journal of Markets and Morality</i>, 9(2): 317-36. World championship in exporting manufactures notwithstanding, weak gross domestic product (GDP) growth and the largest number of unemployed since the 1930s have tarnished the splendor of Germany's once celebrated social market economy (SME). In search of the reasons for their country's present mediocrity, contemporary (ordo-) liberal German economists point to construction defects in the economic constitution that escaped the attention of the founders of the SME. This article reviews the legacy of the father of the SME as well as the liberal critique of the evolution of the SME in postwar Germany under the old systems competition (OSC) between capitalist West and communist East. The liberal white hope, that is the new systems competition (NSC), ensued by European integration and globalization, is presented as a mechanism for overcoming national policy blockades in reforming (labor) market institutions in accordance with the common socioeconomic preferences of all citizens.
2006	L10	Chung, Ching-Yi, and Gary Richardson. 2006. <i>Deposit Insurance and the Composition of Bank Suspensions in Developing Economies: Lessons from the State Deposit Insurance Experiments of the 1920s</i>. National Bureau of Economic Research, Inc. NBER Working Papers: 12594. Eight states established deposit insurance systems between 1908 and 1917. All abandoned the systems between 1921 and 1930. Scholars debate the costs and benefits of these policy experiments. New data drawn from the archives of the Federal Reserve Board of Governors demonstrate that deposit insurance influenced the composition of bank suspensions in these states. In typical years, suspensions due to runs fell. Suspensions due to mismanagement rose. During the penultimate year of each system, the bank failure rate rose to an unsustainable height and the system ceased operations.
2006	L53	CV; O'Connell, Thomas, and Diarmaid Smyth. 2006. "Real Convergence within the European Union: The Case of Ireland." In <i>Living Standards and the Wealth of Nations: Successes and Failures in Real Convergence</i> , ed. Leszek Balcerowicz and Stanley Fischer, 285-308. Cambridge and London: MIT Press.
2006	L96	Klein, Daniel B., and Michael J. Clark. 2006. "A Little More Liberty: What the JEL Omits in Its Account of What the Economic Report of the President Omits: A Comment." <i>Econ Journal Watch</i>, 3(3): 466-83. In September of 2005 the Journal of Economic Literature published a review of that year's Economic Report of the President. They had an opportunity to object to current government interventions, an opportunity to challenge the "impertinence and presumptions" of "kings and ministers [who] pretend to watch over the economy of private people." The ERP itself tepidly proposes a few liberalizations, and regarding those few the JEL authors are sometimes supportive and sometimes dubious. But what is most significant is that the JEL authors do not suggest a single liberalization (outside the few raised by the ERP). There is little trace of the Smithian character. The failing is especially noteworthy because an image of Adam Smith graces the cover of the Journal of Economic Literature.

2007		
2007	A12 D02 L26	Brownlow, Graham, and Chris Batstone. 2007. "Institutions, Entrepreneurship and Economic Performance: Reinterpreting Rogernomics." <i>Journal of Interdisciplinary Economics</i> , 18(2-3): 149-76. Entrepreneurship has been a neglected issue in the teaching and research of mainstream economics. Baumol has likened entrepreneurship to a spectre that haunts the mainstream. He provides a model of entrepreneurship that draws on a variety of sources and which suggests that entrepreneurship, depending on the underlying incentives, can affect an economy for good or ill. This framework is applied to the long-run economic development of New Zealand and is used to explain why the free market reforms initiated in response to financial crisis in 1984, did not lead to sustained economic improvement in the manner consistent with that of Ireland's 'Celtic tiger'. It is suggested that New Zealand, because of the unique features of its historical experience, has inherited institutions that tend to reward unproductive and destructive entrepreneurship. It is shown empirically that the free market reforms did little to reverse this situation. Some policy conclusions for New Zealand are derived based on Baumol's model and the Irish experience. Baumol's model, with its important role for history and politics, provides an important framework for interdisciplinary economists seeking to study economic performance.
2007	D14	CV: Montgomerie, Johnna. 2007. "The Logic of Neo-liberalism and the Political Economy of Consumer Debt-Led Growth." In <i>Neo-liberalism, State Power and Global Governance</i> , ed. Simon Lee and Stephen McBride, 157-72. Dordrecht: Springer.

2007	G32	Karademir, Bahattin, and Ali Danisman. 2007. "Business Groups and Media in Turkey: A Co-evolutionary Perspective to Their Interrelationships." <i>Problems and Perspectives in Management</i> , 5(3): 44-57. Based on the co-evolutionary perspective, the study examines the changing nature of interrelationships of business groups and media in an emerging economy, Turkey, over two institutionally and economically different time periods from 1960 to 2005. According to the co-evolutionary perspective, patterns of relationships between business groups and media exhibit a dynamic nature, taking form depending on their interactions with institutional and macro-economic contexts. For a better understanding of this view, we do a description analysis of the interrelationships between business groups and media in the Turkish context, from a co-evolutionary perspective. It appears that coevolutionary dynamics led to substantial changes in patterns of the interrelationships of business groups and media along with the transformation from the planned period to the liberalization period in the Turkish context. For instance, through the changes in institutional and economic contexts, as well as organizational attributes from the planned period to liberalization period, higher level of media ownership by business groups and higher involvement of business groups in governance mechanisms of the media companies unfolded. The implications of the study for both theory and practice are discussed.
2007	J59	Carlin, Wendy, and David Soskice. 2007. <i>Reforms, Macroeconomic Policy and Economic Performance in Germany</i> . C.E.P.R. Discussion Papers, CEPR Discussion Papers: 6415. The conventional diagnosis of Germany's poor economic performance focuses on supply-side weaknesses and the need for more vigorous reforms to make low-skill labour markets more flexible. We question this on both theoretical and empirical grounds. In an extended version of a New Keynesian model shifts in aggregate demand can move the economy along a range of constant-inflation medium-run unemployment equilibria. The evolution of the real exchange rate and the external balance help to identify whether aggregate supply or aggregate demand shifts have been dominant in accounting for changes in unemployment. We provide some prima facie evidence for Germany and the UK that aggregate demand factors have played an important role in sustaining growth in the UK and weakening it in Germany over the medium run. We show that Germany has a relatively strong record in implementing OECD recommended reforms but the expected employment effects in low-skill service sectors appear disappointing and poverty has increased. By contrast, it is in high productivity sectors including services that the German economy has performed well, especially in exports. Here labour markets are not flexible in the conventional sense: codetermination, vocational training, and coordinated wage bargaining are important. We pursue the implications of these claims for the design and political economy of reforms in Germany.
2007	J60 R10	Coutts, Ken, Andrew Glyn, and Bob Rowthorn. 2007. <i>Structural Change under New Labour</i> . Faculty of Economics (formerly DAE), University of Cambridge, Cambridge Working Papers in Economics. The paper examines specific features of structural change in the UK since 1997, contrasting the decline in industrial jobs with the rise in a variety of service jobs. It examines the proximate causes of structural change, in particular whether the chronically slow growth of manufacturing output in the 1980s has persisted. The implications of this structural change are considered, particularly the effects on the balance of payments and regional employment patterns. The paper suggests that the main impact of government policies on regional employment may have been through the direct and multiplier effects of public expenditure.
2007	L11	Ozmucur, Suleyman. 2007. "Liberalization and Concentration: Case of Turkey." <i>Quarterly Review of Economics and Finance</i> , 46(5): 762-77. The paper attempts to evaluate the liberalization program in terms of its degree of success in achieving competition. The analysis is limited to sellers' concentration ratio in manufacturing. There is a decline in concentration ratio in manufacturing following liberalization measures taken during the post-1980 period. Considering the degree of the success in such targets as low and stable inflation, and high and sustainable growth, the modest decrease in the concentration ratio appears to be a real success. This decrease looks even better if one considers resources devoted to various targets in the economy.

Year	DE	Title and Abstract
2007	P37	Muller, Hannes. 2007. "Pourquoi la Russie n'a-t-elle pas suivi la voie polonaise? Quelques leçons pour les économistes. (Why Did Russia Fail to Follow Poland? Some Lessons for Economists. With English summary.)." <i>Revue d'Etudes Comparatives Est-Ouest</i> , 38(2): 143-66. The differences between the Polish and the Russian transitions during the 1990s are reviewed in light of the economic theories applied to the reform process. Special attention is placed on how the historical and political background of reforms shaped this process. Theoretical explanations have failed to describe how political and institutional complementarities shape policy options. Conclusions are drawn for economic research. In particular, arranging countries according to the pace of reforms--shock therapy or gradualism--does not help us understand the transition experience.
2007	R10	THE SAME AS J60 Coutts, Ken, Andrew Glyn, and Bob Rowthorn. 2007. <i>Structural Change under New Labour</i> . Faculty of Economics (formerly DAE), University of Cambridge, Cambridge Working Papers in Economics.
2007	R21	Bellod Redondo, Jose Francisco. 2007. "Crecimiento y especulación inmobiliaria en la economía española. (With English summary.)." <i>Principios: Estudios de Economía Política</i> , 0(8): 59-82. In this paper we analyze the Spanish economic growth path in late nineties. An important speculative component dominates the economic activity during this period. Housing prices and housing activity show an exploding path that contributes to expand rent and employment faster than other eurozone's countries. We find that near 30% of housing demand is due to speculative demand. We also analyze risks associated to this growth model.
2007	R42	Pereira, Alfredo M., and Jorge M. Andraz. 2007. "Public Investment in Transportation Infrastructures and Industry Performance in Portugal." <i>Journal of Economic Development</i> , 32(1): 1-20. The objective of this paper is to evaluate the effects at the industry level of public investment in transportation infrastructures in Portugal. The empirical results are based on VAR/ECM models for the Portuguese economy and for eighteen industries covering the whole spectrum of economic activity in the country. These models consider private-sector output, employment and investment as well as public investment. Empirical results at the aggregate level indicate that public investment has a positive effect on both private inputs as well as on private output and that it affects labor productivity positively. These aggregate results, however, hide a wide variety of industry-level effects. In absolute terms, the industries that benefit the most from public investment are construction, trade, transportation, Finance, real estate, and services. In turn, relative to their size, the industries that benefit the most are mining, non-metal products, metal products, construction, restaurants, transportation, and finance, and, therefore, public investment tends to shift the industry mix toward these industries. Accordingly, our empirical results suggest that although public investment has been a powerful instrument to enhance the long-term economic performance in Portugal it does so in a way that is rather unbalanced across industries.
2008		
2008	B52 P10	CV: Whalen, Charles J. 2008. "Post-Keynesian Institutionalism and the Anxious Society." In <i>Alternative Institutional Structures: Evolution and Impact</i> , ed. Sandra S. Batie and Nicholas Mercurio, 273-99. Economics of Legal Relationships series. London and New York: Taylor and Francis, Routledge.
2008	C43	CV: Dalle Nogare, Chiara, and Matilde Vassalli. 2008. "Pressure on Bank of Italy: Evidence Using a Taylor Rule." In <i>Italian Institutional Reforms: A Public Choice Perspective</i> , ed. Fabio Padovano and Roberto Ricciuti, 1-20. New York: Springer.
2008	D71	CV: Cavallari, Lilia. 2008. "Are the Income Policy Agreements of 1992-93 in Italy Still Valid? Towards a Theory for the Optimal Design of the "Social Pact" in the European Monetary Union." In <i>Italian Institutional Reforms: A Public Choice Perspective</i> , ed. Fabio Padovano and Roberto Ricciuti, 51-76. New York: Springer.
2008	D83	Collard, Fabrice, and Harris Dellas. 2008. "Monetary Policy and Inflation in the 70s." <i>Journal of Money, Credit, and Banking</i> , 40(8): 1765-81. An influential paper by Clarida, Gali, and Gertler (2000) has attributed the great inflation of the 1970s to the violation of the Taylor principle in the conduct of U.S. monetary policy (weak, indeterminacy inducing response to expected inflation). We evaluate this thesis in the context of a standard New Keynesian model against a version of the model that incorporates incomplete information learning about the true state of the economy. The likelihood-based estimation of the model overwhelmingly favors the specification with indeterminacy over the alternatives with determinacy, independent of the presence and size of misperceptions.
2008	E27	Soto, Raimundo. 2008. <i>Dollarization, Economic Growth, and Employment</i> . Instituto de Economía, Pontificia Universidad Católica de Chile. Documentos de Trabajo: 338. Dollarization brought economic stability to Ecuador and higher economic growth. The labor market has not reacted accordingly and unemployment rates remain stubbornly around 10%. I use a simple econometric model of the labor market to disentangle the impact on employment of GDP growth, real wages, the cost of capital, and the real exchange rate. I found two opposing effects at work. On one hand, vigorous economic growth has led to a substantial expansion of labor demand (scale effect). On the other hand, changes in relative factor prices brought about by the dollarization process have played against employment creation (substitution effects): real minimum wages have increased while at the same time the real price of imported intermediate goods and the cost of capital have declined steadily. Together, these price changes indicate that labor is becoming a more expensive factor of production and, thus, signal for substituting labor away.
2008	F10 N70	Estevadeordal, Antoni, and Alan M. Taylor. 2008. <i>Is the Washington Consensus Dead? Growth, Openness, and the Great Liberalization, 1970s-2000s</i> . National Bureau of Economic Research, Inc, NBER Working Papers: 14264. According to the Washington Consensus, developing countries? growth would benefit from a reduction in tariffs and other barriers to trade. But a backlash against this view now suggests that trade policies have little or no impact on growth. If "getting policies right" is wrong or infeasible, this leaves only the more tenuous objective of "getting institutions right" (Easterly 2005, Rodrik 2006). However, the empirical basis for judging recent trade reforms is weak. Econometrics are mostly ad hoc; results are typically not judged against models; trade policies are poorly measured (or not measured at all, as when trade volumes are spuriously used); and the most influential studies in the literature are based on pre-1990 experience (which predates the "Great Liberalization" in developing countries which followed the GATT Uruguay Round). We address all of these concerns--by using a model-based analysis which highlights tariffs on capital and intermediate goods; by compiling new disaggregated tariff measures to empirically test the model; and by employing a treatment-and-control empirical analysis of pre-versus post-1990 performance of liberalizing and nonliberalizing countries. We find evidence that a specific treatment, liberalizing tariffs on imported capital and intermediate goods, did lead to faster GDP growth, and by a margin consistent with theory (about 1 percentage point per annum). Endogeneity problems are considered and other observations are consistent with the proposed mechanism: changes to other tariffs, e.g. on consumption goods, though collinear with general tariffs reforms, are more weakly correlated with growth outcomes; and the treatment and control groups display different behavior of investment prices and quantities, and capital flows.

2008	L74 L78 R38	Trojaneck, Maria. 2008. "The Conditions of Dwellings Market under Transition--A Case of Poland." <i>Journal of International Studies</i> , 1(1): 144-53. Dwelling market policy that ran in Poland from the beginning of the 1990s, based on the dominant role of government financing has lead to the below mentioned results: significant lack of available dwellings; poor quality of supply linked with its decapitalization; low hire rates which didn't cover maintenance of dwellings' resources; and hire rates were government regulated, so they didn't cover cost of living. This policy turned out to be ineffective. The market changes implemented in the economy were applied also to the dwellings sector--they became a market good instead of a social privilege, which was subject to all rules of buying, selling, pricing, and financing like all market goods. This resulted in the need for changes aimed at: improvement of low cost, long term credit availability and the design of government aid for low income citizens in order to help them solve accommodation problems. Some legal regulations aimed at solving this problem were implemented starting in 1994, however the long-run plan of dwellings policy was not designed. The paper contains diagnosis of the dwellings market in Poland under transition and an attempt to identify its development factors.

2008	P40	Jameson, Ken. 2008. <i>The Indigenous Movement and the Economic Trajectory of Ecuador</i> . University of Utah, Department of Economics, Working Paper Series, Department of Economics, University of Utah. On many measures, the indigenous movement in Ecuador has been the most successful in Latin America. This is particularly the case in political terms where they were key players until leaving the Gutierrez cabinet. Their influence on the direction of economic policy has been minimal, however, and the rapid economic changes undertaken by the Correa administration since 2007 may marginalize them further. This paper examines Ecuador's checkered economic performance in the Washington Consensus period and the notable changes undertaken by Pres. Correa. These changes are then set in the context of the economic programs of the indigenous movement, specifically of CONAIE (Confederacion de Nacionalidades Indigenas del Ecuador). This allows us to isolate several significant areas of overlap where the interests of the indigenous movement and of the Correa administration coincide and where collaboration on economic policy may be feasible.

2009	C31 C35 C83	Conflitti, Cristina. 2009. <i>Opinion Surveys on the Euro: a Multilevel Multinomial Logistic Analysis</i> . Universite Libre de Bruxelles, Ecares, ECARES Working Papers: 2009_015. The main contribution of the paper is to identify the socio economic characteristics that affect the perception of the euro across the original 12 Euro Area countries by specifying and estimating a multilevel multinomial model for polytomous data. The analysis is based on the Flash Eurobarometer dataset that contains cross-country data augmented speci?c country macroeconomic and political series. The use of the multilevel multinomial logistic regression allows to estimate the model considering individuals features and countries characteristics in a single analysis with two-level structure. This structure takes into account dependence between individuals within the same country given a certain component of unobserved heterogeneity between countries. The attitudes towards the euro vary across individuals and across countries and are driven by personal considerations based on the bene?ts and costs of using a single currency within a common area. Individual features, as a high level of education and living in a metropolitan area, have a positive impact towards the perception of the euro, since people having these characteristics can bene?t more from new markets opportunities created by the common area. Moreover, a positive country economic context (low in?ation and high growth) can in?uence people attitudes.
2009	C51	Mountford, Andrew, and Harald Uhlig. 2009. "What Are the Effects of Fiscal Policy Shocks?" <i>Journal of Applied Econometrics</i> , 24(6): 960-92. We propose and apply a new approach for analyzing the effects of fiscal policy using vector autoregressions. Specifically, we use sign restrictions to identify a government revenue shock as well as a government spending shock, while controlling for a generic business cycle shock and a monetary policy shock. We explicitly allow for the possibility of announcement effects, i.e., that a current fiscal policy shock changes fiscal policy variables in the future, but not at present. We construct the impulse responses to three linear combinations of these fiscal shocks, corresponding to the three scenarios of deficit-spending,

Year	DE	Title and Abstract
		deficit-financed tax cuts and a balanced budget spending expansion. We apply the method to US quarterly data from 1955 to 2000. We find that deficit-financed tax cuts work best among these three scenarios to improve GDP, with a maximal present value multiplier of five dollars of total additional GDP per each dollar of the total cut in government revenue 5 years after the shock.
2009	C83	Sahm, Claudia R., Matthew D. Shapiro, and Joel B. Slemrod. 2009. <i>Household Response to the 2008 Tax Rebate: Survey Evidence and Aggregate Implications</i>. National Bureau of Economic Research, Inc, NBER Working Papers: 15421. Only about one-fifth of respondents in the Reuters/University of Michigan survey report that the 2008 tax rebates led them to mostly increase spending, while over half said it would lead them to mostly pay off debt. Of those in the mostly-spend category, the response was swift, with over 80 percent reporting increasing their spending within three months of receiving their rebate. Older households, households with higher wealth and higher income, and those expecting future income growth were generally more likely to spend the rebates. A review of other surveys confirms the general pattern of results and suggests that small changes in survey design do not have a major effect on the distribution of responses. The distribution of survey answers corresponds to an aggregate MPC after one year of about one-third. The paper combines this survey-based estimate of the MPC and the survey-based estimate of the timing of spending to show that the rebates help explain the aggregate movements in saving, spending, and debt in 2008. Because the rebate was large and distributed over a short period, it had a non-trivial effect on total spending in the second and third quarters of 2008. Nonetheless, the results imply that the rebates provided only a modest stimulus to spending per dollar of rebate.

2009	H40 P29	Hermelink, Ursula, and Claudia Trentini. 2009. <i>Gender-sensitive Economic Policies in the UNECE Region in the Context of the Economic and Financial Crisis</i>. UNECE, ECE Discussion Papers Series: 2009_3. Gender equality is a basic human right and is as such a part of the social policy framework. At the same time, it is a multi-faceted concept with its cultural, social, legal, political and economic dimensions and interrelations. The prevalent practice in most countries illustrates that traditionally, macroeconomics and gender equality have been considered as two distinct policy areas that are independently shaped and carried out by different authorities. However, this approach fails to acknowledge the numerous interlinkages between both areas. Indeed, it is in the interest of both gender equality advocates and economic policymakers to closely cooperate. On the one hand, economic policies have an effect on gender equality through their potential to rebalance economic opportunities for both men and women and by influencing the incentive structure of economic agents; on the other hand, gender equality has an impact on the economy, for example through changes in labour force participation and the full use of human capital. This paper presents the interplay between these two policy areas highlighting mechanisms through which they influence each other, both under a structural--or long-term--perspective and in the context of the current economic crisis. The concluding recommendations are primarily directed to national decision-makers

Year	DE	Title and Abstract
		but also to international organizations, particularly financial institutions which influence national decision-making in the economic field.

2009	H68 I11	Baker, Dean, and David Rosnick. 2009. <i>Taming the Deficit: Saving Our Children from Themselves</i>. Center for Economic and Policy Research (CEPR), CEPR Reports and Issue Briefs. Many proponents of conservative fiscal policies talk of the budget deficit as being a matter of intergenerational equality. However, this paper shows the younger generations (and those yet to be born) will contribute more to the deficit than older generations. This analysis uses data from the CBO Long-Term Budget Outlook and the authors' calculations to show that the driving force behind the deficit is our broken health care system and that this should be the focus of the debate.
2009	H75 J30 J62	van den Berg, Gerard J., and Johan Vikstrom. 2009. <i>Monitoring Job Offer Decisions, Punishments, Exit to Work, and Job Quality</i>. C.E.P.R. Discussion Papers, CEPR Discussion Papers: 7460 Unemployment insurance systems include monitoring of unemployed workers and punitive sanctions if job search requirements are violated. We analyze the effect of sanctions on the ensuing job quality, notably on wage rates and hours worked, and we examine how often a sanction leads to a lower occupational level. The data cover the Swedish population over 1999-2004. We estimate duration models dealing with selection on unobservables. We use weighted exogenous sampling maximum likelihood to deal with the fact the data register is large whereas observed punishments are rare. We also develop a theoretical job search model with monitoring of job offer rejection vis-a-vis monitoring of job search effort. The observation window includes a policy change in which the punishment severity was reduced. We find that the hourly wage and the number of hours are on average lower after a sanction, and that individuals move more often to a lower occupational level, incurring human capital losses. Monitoring offer rejections is less effective than monitoring search effort.

2009	J80 J88	Schmitt, John. 2009. <i>Inequality as Policy: The United States Since 1979</i>. Center for Economic and Policy Research (CEPR), CEPR Reports and Issue Briefs. Since the end of the 1970s, the United States has seen a dramatic increase in economic inequality. While the United States has long been among the most unequal of the world's rich economies, the economic and social upheaval that began in the 1970s was a striking departure from the movement toward greater equality that began in the Great Depression, continued through World War II, and was a central feature of the first 30 years of the postwar period. This is not due to chance circumstances but is the direct result of a set of policies designed first and foremost to increase inequality.

Discussion Papers, CEPR Discussion Papers: 7859. This paper examines the relationship between fiscal policy and the current account, drawing on a larger country sample than in previous studies and using panel regressions, vector auto-regressions, and an analysis of large fiscal and external adjustments. On average, a strengthening in the fiscal balance by 1 percentage point of GDP is associated with a current account improvement of 0.2-0.3 percentage point of GDP. This association is as strong in emerging and low-income countries as it is in advanced economies; and significantly higher when output is above potential.
2010	C52	Rondina, Francesca. 2010. <i>The role of model uncertainty and learning in the U.S. postwar policy response to oil prices</i>. Unitat de Fonaments de l'Anàlisi Econòmica (UAB) and Institut d'Anàlisi Econòmica (CSIC), UFAE and IAE Working Papers. This paper studies optimal monetary policy in a framework that explicitly accounts for policymakers' uncertainty about the channels of transmission of oil prices into the economy. More specifically, I examine the robust response to the real price of oil that US monetary authorities would have been recommended to implement in the period 1970-2009; had they used the approach proposed by Cogley and Sargent (2005b) to incorporate model uncertainty and learning into policy decisions. In this context, I investigate the extent to which regulator' changing beliefs over different models of the economy play a role in the policy selection process. The main conclusion of this work is that, in the specific environment under analysis, one of the underlying models dominates the optimal interest rate response to oil prices. This result persists even when alternative assumptions on the model's priors change the pattern of the relative posterior probabilities, and can thus be attributed to the presence of model uncertainty itself.
2010	C54	Mehrhoff, Jens. 2010. "Ajuste estacional en tiempos de cambios económicos fuertes. (Seasonal Adjustment in Times of Strong Economic Changes. With English summary.)" <i>Ensayos Económicos</i>, 0(59): 7-23. The present paper refers to the ESS Guidelines on Seasonal Adjustment and gives an example of how to use them in times of crisis. Taking as a basis the example of Argentine currency in circulation, a comparison is made between revisions from readjusting data every time a new figure is released (partial concurrent adjustment--with and without outlier modeling) and adjusting data with forecast seasonal/calendar factors (controlled

Year	DE	Title and Abstract
		current adjustment). Unlike the recent financial and economic crisis, this example comprises sufficient data to explore the crisis from an ex post view. If strong economic changes are treated adequately, i.e., either by introducing outlier variables or using forecast seasonal/calendar factors, revisions can be kept low, and both methods will give similar results. By contrast, if outliers are not specified, it will be wrongly assumed that the effects of the crisis (partially) recur year after year. This would limit the quality of the estimates of seasonal and calendar factors and result in probably misleading outcomes of the partial concurrent adjustment approach. As the conditions for seasonality remain valid during the crisis, seasonal adjustment is justified in order to facilitate the uncovering of "news" in economic developments during this period.

2010	F44	Patil-Dake, Jayashree, and Swati Mathur. 2010. "India's International Trade during Global Recession." <i>International Journal of Research in Commerce and Management</i>, 1(8): 83-87. Due to the globalization national and local business cannot be unaffected by the global business environment these days. The global recession spread across developed economies in first nine months in 2008-09 and then it started to affect a number of developing economies. It is often said that when the US sneezes the rest of the world catches a cold. The US economy has been deeply affected by the extreme volatility in the energy, food, and commodity prices. India's engagement with the global economy became deeper from the 1990s and interdependence of international trade makes it inevitable to impact the trading partners all over the world. The recent global recession also had a huge impact on Indian industries as well. The present paper attempts to analyze the growth trends of international trade of India especially the import and export trade in the lights of the global recession.
2010	G13	Stern, Robert M. 2010. Trade in Financial Services--Has the IMF Been Involved Constructively?. Research Seminar in International Economics, University of Michigan, Working Papers: 613. This paper considers the key policy issues related to liberalization of trade in financial services that the IMF should be concerned with, and the role the IMF has played in advising on policies related to trade in financial services in its bilateral and multilateral surveillance and conditionality attached to lending programs. IMF staff were generally aware of the literature and country experiences showing the benefits of financial liberalization. But Fund advice in support of liberalization can be best interpreted to be in support of country unilateral policy actions and the dynamics of the WTO accession process.
2010	H12	Singh, Sumanjeet. 2010. "Global Financial Crisis and Indian Economy: A Journey from Recession to Recovery." <i>Journal of International Economic Studies</i>, 0(24): 155-84. The effects of the global financial crisis have been more severe than initially forecast. By virtue of globalization, the moment of financial crisis hit the real economy and became a global economic crisis; it was rapidly transmitted to many developing countries. The crisis emerged in India at the time when the Indian economy was already preoccupied with the adverse effects of inflationary pressures and depreciation of currency. The crisis confronted India with daunting macroeconomic challenges like a contraction in trade, a net outflow of foreign capital, fall in stock market, a large reduction in foreign reserves, slowdown in domestic demand, slowdown in exports, sudden fall in growth rate and rise in unemployment. The government of India has been highly proactive in managing this ongoing crisis with a slew of monetary and fiscal measures to stabilize the financial sector, ensure adequate liquidity and stimulate domestic demand. As a result of this combining with many several structural factors that have come to India's aid, India's economic slowdown unexpectedly eased in the first quarter of 2009. The present paper makes an attempt to assess the impact of global financial crisis on the Indian economy and discuss the various policy measures taken by government of India to reduce the intensity of impacts. The paper also highlights recovery of Indian economy from crisis and in the end of paper concluding remarks are given towards.

2010	O25	Woo, Wing Thye, and Chang Hong. 2010. "Indonesia's Economic Performance in Comparative Perspective and a New Policy Framework for 2049." <i>Bulletin of Indonesian Economic Studies</i>, 46(1): 33-64. This is the first paper of a planned 'Indonesia 2049' project, which asks how far Indonesia's economy will have developed 100 years after actual political independence in 1949. We compare dimensions of Indonesia's economy with those of two oil exporters (Mexico and Nigeria), three large populous developing economies (China, India and Brazil) and three Southeast Asian neighbours (Malaysia, Thailand and the Philippines). Under Soeharto, Indonesia's economic performance was better than it had been under Soekarno, and above the average of the eight comparator countries, but below that of the East Asian economies. Our view is that Susilo Bambang Yudhoyono's second administration must adopt a new economic policy framework to ensure successful transition to knowledge-based growth. This proposed new framework goes beyond the Washington Consensus of 'getting prices right' and 'getting institutions right' to include 'getting the role of science right' and 'getting the conception of the reform process right'.
2010	O31	Mani, Sunil. 2010. "Are Innovations on the Rise in India since the Onset of Reforms of 1991? Analysis of Its Evidence and Some Disquieting Features." <i>International Journal of Technology and Globalisation</i>, 5(1-2): 5-42. There is a general feeling among both the academic and business communities across the world that the India is becoming an important location for the release of a number of innovations. In the context, the paper systematically puts together the empirical evidence on whether this is indeed the case since the reform process of 1991. The ensuing analysis shows that the growth in innovations is not widespread but concentrated in certain specific sectoral systems of innovation such as in the case of the pharmaceutical industry. Also most of the recent innovative activities could be traced to foreign companies operating from the country.
2010	O43	de la Escosura, Leandro Prados, Joan R. Roses, and Isabel Sanz Villarroja. 2010. <i>Stabilization and Growth under Dictatorship: The Experience of Franco's Spain</i>. C.E.P.R. Discussion Papers, CEPR Discussion Papers: 7731. Stabilizing and liberalizing policies are key elements of the Washington Consensus. This paper adds a historical dimension to the ongoing debate by assessing the economic impact of market-oriented reforms undertaken during General Franco's dictatorship, the 1959 Stabilization and Liberalization Plan. Using an index of macroeconomic distortions (IMD) the relationship between economic policies and the growth record is examined. Although a gradual reduction in macroeconomic distortions was already in motion during the 1950s, the 1959 Plan opened the way to a new institutional design that favoured a free-market allocation of resources and allowed Spain to accelerating growth and catching up with Western Europe. Without the 1959 Plan, per capita GDP would have been significantly lower in 1975.

2010	P20 P45	Shelburne, Robert. 2010. <i>The Global Financial Crisis and Its Impact on Trade: The World and the European Emerging Economies</i> . UNECE, ECE Discussion Papers Series: 2010_2. This paper describes how the global financial crisis of 2007-2010 impacted trade both globally and more specifically for the European emerging economies, which in terms of GDP decline, were the most negatively impacted economies in the world. Just as with GDP, the trade of the European emerging economies was more severely impacted by the crisis than the trade for other regions of the world; exports for over one half of these economies declined by more than 50 per cent between the third quarter of 2008 and the first quarter of 2009. Despite these large declines, the geographical and sectoral distribution of their trade remained relatively stable. Most of these economies adjusted to the shock with a currency depreciation of about 20 per cent. The current account deficits of many of these economies which were quite large prior to the crisis were reduced significantly. Although there were some increases in protectionist measures and they did have a beggar-thy-neighbor component, in many cases these measures reflected macroeconomic policy failures, especially regarding the coordination of fiscal stimulus programs, and may have been welfare improving second best policies. The crisis is unlikely to result in major design changes in the world trading system, although the opposite is true for the world financial system.
2010	P20	Cviic, Christopher, and Peter Sanfey. 2010. <i>In Search of the Balkan Recovery: The Political and Economic Reemergence of South-Eastern Europe</i> , New York and Chichester, U.K.: Columbia University Press. 2010	Q11 Q17	Anderson, Kym, and Signe Nelgen. 2010. "How Do Governments Respond to Food Price Spikes? Lessons from the Past." <i>Journal of International Commerce, Economics and Policy</i> , 1(2): 265-85. Food prices in international markets spiked upward in 2008, doubling or more in a matter of months. Evidence is still being compiled on policy responses over the following two years, but new time series estimates of government intervention for the previous five decades allow insights into past policy responses to price fluctuations and spikes. This paper reviews the distortionary impacts of policies used by governments attempting to stabilize their domestic food markets. It then focuses on policy responses in the mid-1970s, as reflected in domestic prices and various annual indicators of distortions to producer and consumer incentives, before drawing out some policy lessons.
2011		
2011	D44	Wilson, Linus. 2011. "Troubling Research on Troubled Assets: Charles Zheng on the U.S. Toxic Asset Auction Plan." <i>Econ Journal Watch</i> , 8(1): 33-38. Charles Zheng (2009) purports to model the U.S. toxic asset auction plan. In the model, "moderately poor bidders outbid rich bidders in such auctions," because poor bidders have less to lose by defaulting on taxpayer loans. Thus, says Zheng: "After defeating their rich rivals and acquiring the toxic assets, such bidders will default on government-provided loans whenever the toxic assets turn out to be unsalvageable." The chief trouble with the paper is that the assumptions do not fit reality. In reality, the government-provided loans used to buy toxic assets are nonrecourse, allowing the borrower to walk away from the loan with no penalties besides ceding the asset that the loan purchased. Thus, there is nothing to make rich bidders less ready to win the auction. Zheng's conclusions that less well endowed borrowers will win toxic asset auctions are erroneous. Further Zheng's use of auctions to model these plans is largely inappropriate since only one of the three government toxic asset plans has government backed investors bid for the same toxic asset in an auction format.
2011	D91	Parker, Jonathan A., Nicholas S. Souleles, David S. Johnson, and Robert McClelland. 2011. <i>Consumer Spending and the Economic Stimulus Payments of 2008</i> . National Bureau of Economic Research, Inc, NBER Working Papers: 16684. We measure the response of household spending to the economic stimulus payments (ESPs) disbursed in mid-2008, using special questions added to the Consumer Expenditure Survey and variation arising from the randomized timing of when the payments were disbursed. We find that, on average, households spent about 12-30% (depending on the specification) of their stimulus payments on non-durable expenditures during the three-month period in which the payments were received. Further, there was also a significant increase in spending on durable goods, in particular vehicles, bringing the average total spending response to about 50-90% of the payments. Relative to research on the 2001 tax rebates, these spending responses are estimated with greater precision using the randomized timing variation. The estimated responses are substantial and significant for older, lower-income, and home-owning households. We further extend the literature in two ways. First, we find little evidence that the propensity to spend varies with the method of disbursement (paper check versus electronic transfer). Second, we evaluate a complementary methodology for quantifying the impact of tax cuts, which asks consumers to self-report whether they spent their tax cuts. The response of spending to the ESPs is indeed largest for self-reported spenders. However, self-reported savers also spent a significant fraction of the payments.
2011	D91	Gavilan, Angel, Pablo Hernandez de Cos, Juan F. Jimeno, and Juan A. Rojas. 2011. "Fiscal Policy, Structural Reforms and External Imbalances: A Quantitative Evaluation for Spain." <i>Moneda y Crédito</i> , 0(232): 49-91. This paper builds a large overlapping generations model of a small open economy featuring imperfect competition in the labor and product markets to understand i) which were the main determinants of the large expansionary phase experienced in Spain from the mid-1990s until the arrival of the global financial crisis in 2007-08; ii) what role fiscal policy and structural reforms could have played to avoid the buildup of large external imbalance over this period; and iii) how these policies could affect the recovery of economic activity in Spain after the crisis. Our results indicate that falling interest rates and demographic changes were the main drivers of the Spanish expansionary phase. As for the macroeconomic behavior of the Spanish economy after the crisis, our results suggest that a front-loading in fiscal consolidation together with structural reforms that eliminate distortions in the goods and labor markets could make the recovery of economic activity in Spain more successful.

2011	E69 H71 H72 H74 H81	Herd, Richard, Sam Hill, and Vincent Koen. 2011. <i>Fiscal Prospects and Reforms in India</i> . OECD Publishing, OECD Economics Department Working Papers: 911. Substantial fiscal consolidation was achieved under the aegis of the 2003 Fiscal Responsibility and Budget Management Act. While deficits widened anew in 2008 and 2009, against the backdrop of the global financial and economic crisis, efforts to reduce them have resumed since. To ensure continued progress, as well as stronger government finances in the longer term, the medium-term fiscal framework needs to be improved, notably by embedding the annual budget in a detailed three-year rolling programme. Expenditure needs to be controlled better, in particular as regards subsidies, which the central government has indeed been trying to rein in, though with difficulty in the face of rising world oil prices. Expenditure also needs to become more effective, in particular in the areas of health care, education and social assistance. On the revenue side, tax reforms have been tabled, both for direct taxes and for the complex and inefficient system of indirect taxes. Corporate income tax rates are being cut, though the headline rate remains high. Lower taxation for large special economic zones deserves to be maintained for some time. For the personal income tax, which only a fairly small proportion of the population pays, thresholds are set to be raised considerably. A goods and services tax is to be introduced, which should help reduce the segmentation of the national market for goods and services. Customs duties have been reduced on average but remain high for some categories of imports, implying scope for further reduction over time.
2011	G22 H81 K23 Q14	Herd, Richard, Vincent Koen, Ila Patnaik, and Ajay Shah. 2011. <i>Financial Sector Reform in India: Time for a Second Wave?</i> . OECD Publishing, OECD Economics Department Working Papers: 879. The Indian financial system has changed considerably since the 1990s. Interest rates have been deregulated and new entrants allowed in the banking and the securities business. The Indian equity market has become world-class. New private banks have emerged that are more customer-oriented than the older state-owned banks. Meanwhile, the scale of saving within the economy has expanded considerably, much as in East Asian economies during their high-growth period. This adds to the need for further financial-sector reform. In particular, banks need much greater freedom in asset allocation. While public-sector banks did appear sounder to the public during the 2007/08 crisis due to implicit government backing, they ought to be privatised to improve their governance and minimise the recurrent need for recapitalisation. The remaining obstacles to new entry have to be reduced. Financial inclusion is an important priority and restrictions on microfinance should be avoided. The regulatory and legal framework also needs to be overhauled, consolidating the diverse legislation. While such reforms would improve financial sector efficiency they would also likely have positive spillover effects on the rest of the economy and help sustain rapid growth. This Working Paper relates to the 2011 OECD Economic Survey of India (www.oecd.org/eco/surveys/india)

2011	H87	Paudyn, Bartholomew. 2011. "The Uncertain (Re)politicisation of Fiscal Relations in Europe: A Shift in EMU's Modes of Governance." <i>Review of International Studies</i> , 37(5): 2201-20. Europe's numerous fiscal crises--2003 Stability and Growth Pact (SGP) crisis, its subsequent 2005 reforms, and the recent sovereign debt woes--draw attention to a shift in the management of EMU; namely the inclusion of more uncertainty-based governance. Understood as modalities of government, risk, and uncertainty make the production of this fiscal-monetary space intelligible as a recognised form of knowledge and object of government. Whereas the Pact was devised as the anchor for EMU, it has come to symbolise its weakness. This article argues that the result is an antagonistic relationship between the programmatic and operational dimensions of fiscal governance; otherwise seen as a dialectic between the two competing domains of expertise/law and politics. Starting with the 2005 SGP reforms, and exacerbated by the credit crisis, uncertainty has been mobilised to justify alternative forms of managing fiscal conduct linked to new strategies of calculation and issues of responsibility. Bound to variegated notions of 'fiscal normality', I contend that the 2005 reforms signal the (re)politicisation of the budgetary framework and the reconfiguration of the politics of limits. Rather than marginalising informal judgment, the government through uncertainty places a greater emphasis on creative entrepreneurialism in fostering compliance in ways risk does not.
2011	H87	Breuss, Fritz. 2011. "Makroökonomische Ungleichgewichte. (Macroeconomic Imbalances. With English summary.)" <i>Wirtschaftspolitische Blätter</i> , 58(3): 409-28. Keynes developed the first macroeconomic disequilibrium theory as an answer to the "Great Depression" in the 1930s. In times of crisis, his theory is still valid. A "new Keynes" as response to the "Great Recession" of 2009 is not yet in sight. The drifting apart of competitiveness of the Euro zone countries caused the building-up of external imbalances. Together with the sovereign debt crises this cumulated in the present Euro crisis. The hope for economic convergence of the Euro zone member states did not materialize. In the course of the further development of the asymmetric policy design of EMU towards better "governance" or even an "EU economic government" (the EL) will pay attention also to "macroeconomic imbalances"--together with the fiscal imbalances handled with the reformed SGP. In the world economy, the G20 group will correct global imbalances with the strategy of "rebalancing growth".
2011	H87	Schnabl, Gunther. 2011. "Triebkräfte und Lösungsansätze globaler und europäischer Leistungsbilanzungleichgewichte. (Determinations of and Economic Policy Solutions for Global and Intra-European Imbalances. With English summary.)" <i>Wirtschaftspolitische Blätter</i> , 58(3): 429-49. The paper scrutinizes the determinants of global and intra-European current account imbalances, which have continued to grow since the turn of the millennium up to the recent crisis. For Europe, the reasons of the current account imbalances are identified to originate in the German attempts to consolidate public finances and to restore the international competitiveness of the enterprise sector after the end of its reunification boom. On a global level, expansionary monetary and fiscal policies of the US, which interact with the macroeconomic policies of the countries at the periphery of the world dollar standard, are seen to be at the root of the global imbalances. Based on the different types of current account imbalances in Europe and within the informal dollar standard different crisis and adjustment scenarios are discussed. Due

Year	DE	Title and Abstract
		to the pivotal role of the dollar in the international monetary system, a sustained consolidation of US monetary and fiscal policies is seen as the prerequisite for a reduction of global and intra-European imbalances.

2011	H87	Belke, Ansgar. 2011. "Wachwechsel in der EZB--Trichets Erbe in Zeiten von Eurozonen- und globalen Ungleichgewichten. (Change of Guards in the ECB--Trichet's Legacy in Times of Euro Area and Global Imbalances. With English summary.)." <i>Wirtschaftspolitische Blätter</i> , 58(3): 519-40. This paper provides a review of the Trichet ECB presidency and his main legacy. It also delivers a political-economic preview of the Draghi presidency and evaluates the challenges the new President will have to deal with. Among the legacies is the potential dramatic worsening of the euro area debt crisis since up to now no sustainable institutional solution is found. On top of that Draghi will be confronted to a larger extent than his predecessor with challenges concerning international liquidity spillovers and the reform of the international monetary system.
2011	H87	Skaperdas, Stergios. 2011. <i>Seven Myths about the Greek Debt Crisis</i> . University of California-Irvine, Department of Economics, Working Papers: 111201. In Greece and other countries of the eurozone there are a number of misconceptions about the debt crisis. I argue against seven of such misconceptions (or, myths) about the effects of default, the primary cause of the crisis, the likely effects of an exit from the eurozone, the bargaining power of the Greek government in its negotiations with the EU/ECB/IMF troika, and others. Default and exit from the eurozone appears to be the most viable alternative in the long run; such a move would seem to require considerable preparation under short time constraints and a government with broad political support.
2011	J33	Burda, Michael C., and Jennifer Hunt. 2011. <i>What Explains the German Labor Market Miracle in the Great Recession?</i> . Sonderforschungsbereich 649, Humboldt University, Berlin, Germany, SFB 649 Discussion Papers: SFB649DP2011-031. Germany experienced an even deeper fall in GDP in the Great Recession than the United States with little employment loss. Employers' reticence to hire in the preceding expansion--associated in part with a lack of confidence it would last--contributed to an employment shortfall equivalent to 40 percent of the missing employment decline in the recession. Another 20 percent may be explained by wage moderation. A third important element was the widespread adoption of working time accounts, which permit employers to avoid overtime pay if hours per worker average to standard hours over a window. We find that this provided disincentives for employers to lay off workers in the downturn. While the overall cuts in hours per worker were consistent with the severity of the Great Recession, reduction of working time account balances substituted for traditional government-sponsored short time work.
2011	J33	Schmitt, John. 2011. <i>Labor Market Policy in the Great Recession: Some Lessons from Denmark and Germany</i> . Center for Economic and Policy Research (CEPR), CEPR Reports and Issue Briefs. This paper reviews the recent labor-market performance of 21 rich countries, with a focus on Denmark and Germany. Denmark, which was widely seen as one of the world's most successful labor markets before the downturn, has struggled in recent years. Germany, however, has outperformed the rest of the world's rich countries since 2007, despite earlier labor-market difficulties. Labor-market institutions seem to explain the different developments in the two economies. Danish institutions--which include extensive opportunities for education, training, and placement of unemployed workers--appear to perform well when the economy is at or near full employment, but have not been effective during the downturn. German labor-market institutions, which emphasize job security by keeping workers connected to their current employers, may have drawbacks when the economy is operating at or near full employment, but have performed well in the Great Recession. The paper also discusses lessons for U.S. labor-market policy.
2011	J33	Schmitt, John, and David Rosnick. 2011. <i>The Wage and Employment Impact of Minimum-Wage Laws in Three Cities</i> . Center for Economic and Policy Research (CEPR), CEPR Reports and Issue Briefs. This report analyzes the wage and employment effects of the first three city-specific minimum wages in the United States -San Francisco (2004), Santa Fe (2004), and Washington, DC (1993). We use data from a virtual census of employment in each of the three cities, surrounding suburbs, and nearby metropolitan areas, to estimate the impact of minimum-wage laws on wages and employment in fast food restaurants, food services, retail trade, and other low-wage and small establishments.
2011	J61	Davies, James B., and Stanley L. Winer. 2011. "Closing the 49th Parallel: An Unexplored Episode in Canadian Economic and Political History." <i>Canadian Public Policy</i> , 37(3): 307-41. We draw attention to, and begin to consider the implications of, the severe restrictions on emigration by Canadians to the United States introduced under the US Immigration Act of 1965. These restrictions came into effect in 1968 and lasted until mobility began to increase to some extent under the free trade agreements in the early 1990s. This is an unusual episode in Canadian history, the implications of which for the Canadian economy and for Canadian public policy appear to have received little attention. We assemble evidence that suggests that the near closing of the border led toward uncoupling of Canadian and US labour markets and to a decrease in the elasticity of labour supply in Canada. Implications for Canadian fiscal policy of a decline in labour elasticity are then derived using a model of equilibrium fiscal structure. We show that these predictions, including heavier taxation of labour income and an increase in the overall size of the public sector, are consistent with what occurred over the two decades after the near closing of the US border, as well as with the partial reopening following the free trade agreements. The analysis continues by acknowledging additional factors that determine the structure and size of the public sector, and by considering the near closing of the border in a broader historical context. We conclude with a prediction about the future course of Canada-US migration policy that follows from our analysis.
2011	K00	Stevenson, Betsey, and Justin Wolfers. 2011. <i>Trust in Public Institutions over the Business Cycle</i> . National Bureau of Economic Research, Inc, NBER Working Papers: 16891. We document that trust in public institutions--and particularly trust in banks, business and government--has declined over recent years. U.S. time series evidence suggests that this partly reflects the pro-cyclical nature of trust in institutions. Cross-country comparisons reveal a clear legacy of the Great Recession, and those countries whose unemployment grew the most suffered the biggest loss in confidence in institutions, particularly in trust in government and the financial sector. Finally, analysis of several repeated cross-sections of confidence within U.S. states yields similar qualitative patterns, but much smaller magnitudes in response to state-specific shocks.

We develop an otherwise standard sticky-price DSGE model, whereby at low enough asset market participation, standard aggregate demand logic

Year	DE	Title and Abstract
		is inverted: interest rate increases become expansionary. Thereby, a passive monetary policy rule ensures equilibrium determinacy and maximizes welfare, suggesting that Federal Reserve policy in the pre-Volcker era was better than conventional wisdom suggests. We provide empirical evidence consistent with this hypothesis, and study the relative merits of changes in structure and shocks for reproducing the conquest of the Great Inflation and the Great Moderation.
2011	N22	Alcidi, Cinzia, and Daniel Gros. 2011. "Great Recession versus Great Depression: Monetary, Fiscal and Banking Policies." <i>Journal of Economic Studies</i>, 38(5-6): 673-90. This paper sets out to explore three areas in which the experience of the great depression might be relevant today: monetary policy, fiscal policy, and the systemic stability of banks. A critical review of the US data for the 1920s and 1930s is presented and stylised facts for monetary, fiscal, and banking policies during the noughties are shown and compared with those of the great depression. The authors confirm the consensus on monetary policy: deflation and massive bank failures must be avoided. With regard to fiscal policy it is impossible to confirm a widespread opinion according to which fiscal policy did not work because it was not tried. The paper finds that fiscal policy went to the limit of what was possible under the conditions as they existed then. Policy reaction after 1932 was no less bold than that of today if one accounts for sustainability issues. Lastly, the investigation of the US banking system shows a surprising resilience of commercial banks that remained profitable, at least on average, even during the worst years.

2012	B54 D13 H41	Tcherneva, Pavlina R. 2012. "What Do Poor Women Want? Public Employment or Cash Transfers? Lessons from Argentina" Levy Economics Institute, The, Economics Working Paper Archive. The literature on public employment policies such as the job guarantee (JG) and the employer of last resort (ELR) often emphasizes their macroeconomic stabilization effects. But carefully designed and implemented policies like these can also have profound social transformative effects. In particular, they can help address enduring economic problems such as poverty and gender disparity. To examine how, this paper will look at the reform of Argentina's Plan Jefes into Plan Familias. Plan Jefes was the hallmark stabilization policy of the Argentine government after the 2001 crisis. It guaranteed a public sector job in a community project to unemployed male and female heads of households. The vast majority of beneficiaries, however, turned out to be poor women. For a number of reasons that are explored below, the program was later reformed into a cash transfer policy, known as Plan Familias, that still exists today. The paper examines this reform in order to evaluate the relative impact of such policies on some of the most vulnerable members of society; namely, poor women. An examination of the Argentine experience based on survey evidence and fieldwork reveals that poor women overwhelmingly want paid work opportunities, and that a policy such as the JG or the ELR cannot only guarantees full employment and macroeconomic stabilization, but it can also serve as an institutional vehicle that begins to transform some of the structures and norms that produce and reproduce gender disparities. These transformative features of public employment policies are elucidated by turning to the capabilities approach developed by Amartya Sen and elaborated by Martha Nussbaum-an approach commonly invoked in the feminist literature. This paper examines how the access to paid employment can enhance what Sen defines as an individual's "substantive freedom." Any policy that fosters genuine freedom begins with an understanding of what the targeted population (in this case, poor women) wants. It then devises a strategy that guarantees that such opportunities exist and removes the obstacles to accessing these opportunities.
2012	C18	Pesaran, M. Hashem, and Ron P. Smith. 2012. <i>Counterfactual Analysis in Macroeconometrics: An Empirical Investigation into the Effects of Quantitative Easing</i>. CESifo Group Munich, CESifo Working Paper Series: 3879. This paper is concerned with ex ante and ex post counterfactual analyses in the case of macroeconomic applications where a single unit is observed before and after a given policy intervention. It distinguishes between cases where the policy change affects the model's parameters and where it does not. It is argued that for ex post policy evaluation it is important that outcomes are conditioned on ex post realized variables that are invariant to the policy change but nevertheless influence the outcomes. The effects of the control variables that are determined endogenously with the policy outcomes can be solved out for the policy evaluation exercise. An ex post policy ineffectiveness test statistic is proposed. The analysis is applied to the evaluation of the effects of the quantitative easing (QE) in the UK after March 2009. It is estimated that a 100 basis points reduction in the spread due to QE has an impact effect on output growth of about one percentage point, but the policy impact is very quickly reversed with no statistically significant effects remaining within 9-12 months of the policy intervention.
2012	C32	Kim, Hyeyoen, and Mark P. Taylor. 2012. "Large Datasets, Factor-Augmented and Factor-Only Vector Autoregressive Models, and the Economic Consequences of Mrs Thatcher." <i>Economica</i>, 79(314): 378-410. We investigate methods of capturing the salient characteristics of very large datasets in an investigation of UK and US macroeconomic policy, using factor-augmented VAR (FAVAR) models. We also estimate structural factor-only VAR (FOVAR) models and examine the impact of aggregate demand and aggregate supply. In a further empirical application, we find that while there is some evidence of increased macroeconomic flexibility in the USA as well as the UK since the late 1980s, the speed of macroeconomic adjustment is more marked in the UK economy post-1987, possibly reflecting the UK labour market reforms of the Thatcher government in the 1980s.

2012	F62	Unay, Sadik. 2012. "Domestic Transformation and Raison du Monde: Turkey's Nascent Competition State." <i>Emerging Markets Finance and Trade</i>, 48(0): 7-18. The complex issue of state transformation in the face of global economic integration has constituted the locus of the interdisciplinary globalization literature, attracting a myriad of contributions from the analysts rooted in various weltanschauungs and academic specializations. This study presents a theoretically informed comparative political economy analysis focusing on various manifestations of the competition state with special reference to Turkey. To this end, an overview of the competition state literature is presented in order to convey the main dynamics of political globalization under pressures for increased economic integration. Analytically, four crucial policy shifts propounded by the competition state theorists are taken on board. These include the transition from inflationary expansionism to neoliberal monetarism; the shift from macroeconomic to microeconomic governance; the shift from extensive interventionism to strategic targeting; and the shift from maximization of social welfare to promotion of innovation, profitability, and entrepreneurship in public and private sectors. An external dimension is added to these shifts in the form of the transition from a geopolitically determined national security mentality to the dominance of economic diplomacy and the quest for increased competitiveness. Following a vigilant analysis of Turkey's first and second generation neoliberal transformation experiments in light of these five profound policy shifts, the author concludes that the Turkish state could at best be described as a "nascent competition state" with varying levels of advancement in each of the studied dimensions.
2012	G24	Conard, Edward. 2012. <i>Unintended Consequences: Why Everything You've Been Told about the Economy Is Wrong</i>, New York: Penguin, Portfolio. Explores how the U.S. economy works, why the United States has outperformed its high-wage rivals, what caused the financial crisis, and what improvements might better protect our economy without damaging its growth. Discusses a brief history of the U.S. economy; the role of investment; the role of the trade deficit; the role of incentives; the role of banks, credit rating agencies, and regulators; the role of short-term debt and government policy; preventing another bank run; reducing unemployment; and redistributing income. Conard is a former partner at Bain Capital.

2012	J48	Grimshaw, Damian, and Jill Rubery. 2012. "The End of the UK's Liberal Collectivist Social Model? The Implications of the Coalition Government's Policy during the Austerity Crisis." <i>Cambridge Journal of Economics</i>, 36(1): 105-26. This paper reviews change and continuity in social policy up to summer 2011, contrasting the liberal collectivist approach of New Labour with the reinforced neoliberalism of the coalition government. Given the ongoing uncertainty of economic conditions and the obvious difficulty of forecasting the stability of coalition policy, it is not possible to arrive at a firm conclusion as to the sustainability of the recent change of policy direction. Nevertheless, in a critical assessment of policy in three areas--labour market governance, the life course and the public sector--the paper argues that the UK is witnessing an intensified neoliberal policy emphasis, a redrawing or abolition of minimum standards and failures to meet changing patterns of social needs. While the collectivist elements of New Labour's social policy approach were contradictory in many respects, the coalition government through a withdrawal of the state and obtuse pronouncements about the big society is seeking to embed in the UK a stronger neoliberal approach to social policy. Flawed assumptions about the scope for traditional families and localised big society programmes to compensate for state withdrawal mean the trajectory of change is not clear-cut; preferences for collectivist and publicly accountable solutions to issues of social policy are unlikely to be easily eroded. However, ongoing policy change during the austerity crisis is already inflicting radical change with adverse impacts upon many groups of society.
2012	J48	Tcherneva, Pavlina R. 2012. <i>Reorienting Fiscal Policy after the Great Recession</i>. Levy Economics Institute, The, Economics Working Paper Archive. The paper evaluates the fiscal policy initiatives during the Great Recession in the United States. It argues that, although the nonconventional fiscal policies targeted at the financial sector dwarfed the conventional countercyclical stabilization efforts directed toward the real sector, the relatively disappointing impact on employment was a result of misdirected funding priorities combined with an exclusive and ill-advised focus on the output gap rather than on the employment gap. The paper argues further that conventional pump-priming policies are incapable of closing this employment gap. In order to tackle the formidable labor market challenges observed in the United States over the last few decades, policy could benefit from a fundamental reorientation away from trickle-down Keynesianism and toward what is termed here a "bottom-up approach" to fiscal policy. This approach also reconsiders the nature of countercyclical government stabilizers.

2012	N94	Shelburne, Robert. 2012. <i>Restoring Stability to Europe</i>. UNECE, ECE Discussion Papers Series; 2012_3 The eurozone is in political and economic crisis. This is due to the inadequate design of the institutional structure of the eurozone and to the current poor implementation of macroeconomic policy. In designing the eurozone, well established principles of economics were ignored and major decisions were based primarily upon political considerations. Thus it was only a matter of time before these defects would become apparent. In addressing the current crisis that has developed policy makers have misdiagnosed the causes of the crisis and implemented solutions that are largely counterproductive to solving it. This paper describes the underlying factors that led to the inadequate design and improper macroeconomic response and explains what will be necessary in order to create an institutional structure and macroeconomic policy framework that can restore economic stability and growth to the region.

2013	L85	Gurun, Umit G., Gregor Matvos, and Amit Seru. 2013. Advertising Expensive Mortgages. National Bureau of Economic Research, Inc, NBER Working Papers: 18910. We use a unique dataset that combines information on advertising by subprime lenders and mortgages originated by them from 2002 to 2007 to study the relationship between advertising and the nature of mortgages obtained by consumers. We exploit the richness of our data and measure the relative expensiveness of a given mortgage as the excess rate of a mortgage after accounting for a broad set of borrower, contract, and regional characteristics associated with a given mortgage--less expensive mortgages, all else equal, are better products from the perspective of the consumer. We find a strong positive relationship between the intensity of local advertising and the expensiveness of mortgages extended by lenders within a given region, with the relationship strongest for advertising through newspapers, the most heavily used channel for local advertising of mortgages. This pattern survives even after conditioning for a rich set of borrower, loan and region characteristics and exploiting differences in advertising within a given lender. Advertisers lend to consumers who, all else equal, default less, making it unlikely that our results are driven by unobservable borrower quality. We also exploit variation in mortgage advertising induced by the entry of Craigslist across different regions to demonstrate that the relation between advertising and expensiveness of mortgages is not likely to be spurious. We corroborate that advertising is most effective when targeted at groups that might be less informed about mortgages, such as the poor, the less educated and minorities. These findings are inconsistent with the "informative view" under which advertising allows consumers to find cheaper products, and instead support the "persuasive view" that advertising in the subprime mortgage market was used to steer consumers into expensive choices.

Year	DE	Title and Abstract
2006		
2006	C22	Diron, Marie. 2006. <i>Short-term forecasts of euro area real GDP growth - an assessment of real-time performance based on vintage data</i>. European Central Bank, Working Paper Series: 622. Economic policy makers, international organisations and private-sector forecasters commonly use short-term forecasts of real GDP growth based on monthly indicators, such as industrial production, retail sales and confidence surveys. An assessment of the reliability of such tools and of the source of potential forecast errors is essential. While many studies have evaluated the size of forecast errors related to model specifications and unavailability of data in real time, few have provided a complete assessment of forecast errors, which should notably take into account the impact of data revision. This paper proposes to bridge this gap. Using four years of data vintages for euro area conjunctural indicators, the paper decomposes forecast errors into four elements (model specification, erroneous extrapolations of the monthly indicators, revisions to the monthly indicators and revisions to the GDP data series) and assesses their relative sizes. The results show that gains in accuracy of forecasts achieved by using monthly data on actual activity rather than surveys or financial indicators are offset by the fact that the former set of monthly data is harder to forecast and less timely than the latter set. While the results presented in the paper remain tentative due to limited data availability, they provide a benchmark which future research may build on.
2006	D02	CV: Ericson, Richard E. 2006. "Regional Retreat: The Reaction of Russian Institutions to Liberalising Reform." In <i>Institutions, Globalisation and Empowerment</i> , ed. Kartik C. Roy and Jorn Sideras, 175-98. Cheltenham, U.K. and Northampton, Mass.: Elgar.
2006	G01	Andrescu, Eugen. 2006. "The Monetary Outlook by 2025-2030." <i>Romanian Economic and Business Review</i> , 1(2): 63-68. The globalization and the worldwide regionalization phenomena which also bring about a simplification of the usages, the rules, the instruments, the legislation as well as that of the behaviour of states and economic agents could not leave untouched the currencies of the more than 200 independent countries, although the minting of such currencies has always been the "royal" prerogative and the very symbol of the sovereignty of a state. Already the great number of currencies that exist throughout the world imply additional costs for the international business people and for the investors, but also for the central banks of those states that are confronted with major monetary crisis.
2006	H32	CV: Bosworth, Barry P., and Susan M. Collins. 2006. "Economic Growth." In <i>The Economy of Puerto Rico: Restoring Growth</i> , ed. Susan M. Collins, Barry P. Bosworth and Miguel A. Soto-Class, 17-69. Washington, D.C.: Brookings Institution Press; San Juan, Puerto Rico: Center for the New Economy.
2006	K21 L40	CESifo European Economic Advisory Group. 2006. <i>Report on the European Economy 2006</i>, Munich: Ifo Institute for Economic Research. Fifth annual report of the European Economic Advisory Group at CESifo comments on the state and prospects of the European economy. Discusses the short-term macroeconomic outlook and policy options for the European economy. Reviews the current debate about global imbalances. Analyzes the growth performance of different European Union countries. Studies primary and secondary educational systems in the European Union. Considers merger control and competition policy in Europe.
2006	K40	CV: Randall, Laura. 2006. "Reinventing Mexico." In <i>Changing Structure of Mexico: Political, Social, and Economic Prospects</i> , ed. Laura Randall, 3-18. Second edition. Columbia University Seminar Series. Armonk, N.Y. and London: Sharpe.
2006	L40	THE SAME AS K21 CESifo European Economic Advisory Group. 2006. <i>Report on the European Economy 2006</i>, Munich: Ifo Institute for Economic Research.
2006	L71	CV: Larsen, Erling Roed. 2006. "Escaping the Resource Curse and the Dutch Disease? When and Why Norway Caught Up with and Forged Ahead of Its Neighbors." In <i>Natural Resources, Taxation, and Regulation: Unusual Perspectives on a Classic Topic</i> , ed. Laurence S. Moss, 133-68. Studies in Economic Reform and Social Justice. Malden, Mass. and Oxford: Blackwell.
2006	M16	CV: Presley, John R. 2006. "Economic Performance and Outlook." In <i>Doing Business with Saudi Arabia</i> , ed. Anthony Shoult, 29-45. Third edition. Global Market Briefings. London and Philadelphia: GMB.
2006	N11	Bonner, William, and Addison Wiggin. 2006. <i>Empire of Debt: The Rise of an Epic Financial Crisis</i>, Hoboken, N.J.: Wiley. Argues that America has become an empire, that empires eventually fall, and that the American empire will fall due to debt. Discusses lessons from history and the historical record of empires; how empires work; military adventurism as a characteristic of empires;

Year	DE	Title and Abstract
		why the best U.S. presidents did the least; the "revolution" of 1913, when the United States got the tools needed to fund and direct its ambitious military and domestic programs; the Great Depression; the Vietnam War; Nixon and the end of dollar/gold convertibility; Reagan's legacy; America's great empire of debt; modern imperial finance; Americans' delusion that they can get richer without saving or earning more money and the coming correction; how Americans spend and consume while residents of more thrifty countries build more factories, import more technology, and improve their products; population aging in America; how Wall Street thrives on illusions; and why the investor should prepare for a write-down of U.S. debt at any moment.
2006	P40	SESRTCIC. 2006. "Annual Economic Report on the OIC Countries, 2005." <i>Journal of Economic Cooperation among Islamic Countries</i> , 27(3): 1-50. In the light of the recent major developments in the world economy, this report analyses the economic situation in the OIC countries during the five-year period 2000-2004. It examines the major economic indicators of those countries and compares them with those of the world averages and the averages of both developing and developed countries during the same period. Overall, the Report shows that the average economic performance of the OIC countries, as a group, remained below the level maintained by the developing countries which reflects more vulnerability to the adverse external shocks in the world economy. The Report also shows that the said performance is highly influenced by that of a few members such that only 10 major countries account for more than 60% of the total OIC output and exports. Such a situation becomes worse considering the high external debt burden and unsatisfactory levels of FDI in many OIC countries. Given this state of affairs, and noting the high pace of globalization and liberalization in the world economy, the OIC countries have become more vulnerable to the intense competition and unpredictable fluctuations in international trade, the instability in financial flows and changes in technology. In this connection, the Report suggests some broad indicative policy actions to which the attention of the member countries needs to be drawn in their efforts to attain a higher level of economic progress and integration.
2006	Q17	CV: Radhakrishna, R., S. K. Rao, S. Mahendra Dev, and K. Subbarao. 2006. "India in a Globalising World: Introduction and Overview." In <i>India in a Globalising World: Some Aspects of Macroeconomy, Agriculture and Poverty</i> , ed. R. Radhakrishna, S. K. Rao, S. Mahendra Dev and K. Subbarao, 53-78. New Delhi: Academic Foundation In collaboration with Centre for Economic and Social Studies, Hyderabad; distributed by Independent Publishers Group, Chicago.
2006	Q52	Organisation for Economic Co-operation and Development. 2006. <i>OECD Economic Surveys: Czech Republic 2006</i> , Paris and Washington, D.C.: Organisation for Economic Co-operation and Development. Reviews the economic situation and policies of the Czech Republic. Presents basic statistics on the Czech Republic, covering land, people, government, production, foreign trade, and currency. Discusses policy challenges in sustaining catch-up; ensuring fiscal sustainability and assessing recent proposals for pension reform; motivating regional and municipal governments; improving the labor market--getting education right for long-term growth; and enhancing the business environment--policies to promote innovation.
2007		
2007	B22	Jha, Raghendra. 2007. <i>The Indian View of Economic Development: Resilience and the Quest for Growth</i> . Australian National University, Australia South Asia Research Centre, ASARC Working Papers.
2007	C11	Milani, Fabio. 2007. <i>Learning and Time-Varying Macroeconomic Volatility</i> . University of California-Irvine, Department of Economics, Working Papers: 070802. This paper presents a DSGE model in which agents' learning about the economy can endogenously generate time-varying macroeconomic volatility. Economic agents use simple models to form expectations and need to learn the relevant parameters. Their gain coefficient is endogenous and is adjusted according to past forecast errors. The model is estimated using likelihood-based Bayesian methods. The endogenous gain is jointly estimated with the structural parameters of the system. The estimation results show that private agents appear to have often switched to constant-gain learning, with a high constant gain, during most of the 1970s and until the early 1980s, while reverting to a decreasing gain later on. As a result, the model can generate a pattern of volatility, which is increasing in the 1970s and falling in the second half of the sample, with a decline that can roughly match the magnitude of the Great Moderation. The paper also documents how a failure to incorporate learning into the estimation may lead econometricians to spuriously find time-varying volatility in the exogenous shocks, even when these have constant variance by construction.

2007	C43 K12	Squalli, Jay, Kenneth Wilson, and Sarah Hugo. 2007. "An Examination of European Growth Competitiveness." <i>Economic and Business Review</i> , 9(2): 127-46. This paper argues that the arbitrary selection of weights by the World Economic Forum, (WEF) used in the calculation of the Growth Competitiveness Index (GCI) could lead to a distorted vision of the relative competitiveness of European countries. Using the weights generated by Structural Equation Modelling (SEM), the gap in competitiveness between European Union members becomes more distinct, whilst for many of the acceding and candidate European countries the competitiveness rating is found to have been previously underestimated by the WEF. This paper demonstrates the superiority and robustness of SEM for calculating weights which lead to more reliable policy and business recommendations.
2007	C43	Maravall, Agustin, and Ana del Rio. 2007. <i>Temporal aggregation, systematic sampling, and the Hodrick-Prescott filter</i> . Banco de Espana, Banco de Espana Working Papers: 0728. Maravall and del Rio (2001), analyzed the time aggregation properties of the Hodrick-Prescott (HP) filter, which decomposes a time series into trend and cycle, for the case of annual, quarterly, and monthly data, and showed that aggregation of the disaggregate component cannot be obtained as the exact result from direct application of an HP filter to the aggregate series. The present paper shows how, using several criteria, one can find HP decompositions for different levels of aggregation that provide similar results. We use as the main criterion for aggregation the preservation of the period associated with the frequency for which the filter gain is 1/2; this criterion is intuitive and easy to apply. It is shown that the Ravn and Uhlig (2002) empirical rule turns out to be a first-order approximation to our criterion, and that alternative--more complex--criteria yield similar results. Moreover, the values of the parameter lambda of the HP filter, that provide results that are approximately consistent under aggregation, are considerably robust with respect to the ARIMA model of the series. Aggregation is seen to work better for the case of temporal aggregation than for systematic sampling. Still a word of caution is made concerning the desirability of exact aggregation consistency. The paper concludes with a clarification having to do with the questionable spuriousness of the cycles obtained with HP filter.

2007	H31	Farhi, Emmanuel. 2007. <i>Capital Taxation and Ownership when Markets are Incomplete</i>. National Bureau of Economic Research, Inc. NBER Working Papers: 13390. This paper analyzes the theoretical and quantitative implications of optimal capital taxation in the neoclassical growth model with aggregate shocks and incomplete markets. The model features a representative-agent economy with proportional taxes on labor and capital. I first consider the case that the only asset the government can trade is a real risk-free bond. Taxes on capital are set one period in advance, reflecting inertia in tax codes and ruling out replication of the complete markets allocation. Because capital income varies with the state of the economy, capital taxation provides a state contingent source of revenues. I thus identify a novel potential role for capital taxation as a risk sharing instrument between the government and private agents. However, this benefit must be weighted again the distortionary cost of capital taxation. For a baseline case, the optimal policy features a zero tax on capital. Moreover, numerical simulations show that the baseline case provides an excellent benchmark. I next allow the government to hold a non trivial position in capital. Capital ownership provides the same benefit or risk sharing but without the cost of tax distortions. In a variety of quantitative exercises, I show that capital ownership allows the government to realize about 90% of the welfare gains from moving to complete markets. Large positions are typically required for optimality. But smaller positions achieve substantial benefits. In a business-cycle simulation, I show that a 15% short equity position achieves over 40% of the welfare gains from completing markets.

2008	J65	Appelbaum, Eileen, Dean Baker, and John Schmitt. 2008. <i>Slow-Motion Recession: What Congress Can Do to Help</i>. Center for Economic and Policy Research (CEPR), CEPR Reports and Issue Briefs. This report presents several proposals designed to address the nation's current economic slowdown. To blunt the effects of this downturn and provide immediate relief, the authors suggest a second stimulus package. Proposals for the package include an expanded tax credit for homes and businesses to make energy conserving renovations, subsidies for state and local governments to reduce fares on public transportation, matching grants to state and local governments to invest in energy conserving renovations, grants to state and local governments so that they will not be forced to raise taxes and/or layoff workers and cut services in the middle of a downturn, additional payments to low- and moderate-income households through programs such as Food Stamps, School Lunches and the Low Income Heating and Energy Assistance Program to make it easier for families to cope with rising food and energy prices, modernization of the unemployment insurance system and further extension of the benefit period. To promote continued, sustained growth, the paper suggests policies that will require restructuring the U.S. economy to protect homeowners, reel in financial markets, and to restore some balance to our work and family commitments.
2008	K20 L10	Rossi, Salvatore. 2008. "Lo stato dell'industria italiana e le sue prospettive. (The State of Italian Industry and Its Outlook. With English summary.)" <i>L'Industria, Nuova Serie</i>, 29(0): 81-97. The world economy has been going through two main changes over the last fifteen years: globalization and the ICT-based revolution. Italy has only partially responded to the new global scenario. The first results of a survey conducted by the Bank of Italy on the structural transformations of the Italian industry show that, over the last five-six years, Italian enterprises have introduced some innovating elements in the fields of technology, organization and localization, in order to face the changing competition environment worldwide. The scenario still looks uncertain. Italian structural policies ought to be updated and adapted to the new global context, through the liberalization of protected markets, adjustments in the financial structure and a revolution of juridical and administrative culture.

The Deposit Insurance Fund reserve ratio fell to -0.16 percent, and 50 FDIC-insured institutions failed during the quarter.
2009	H68 II1	Baker, Dean, and David Rosnick. 2009. <i>Taming the Deficit: Saving Our Children from Themselves</i>. Center for Economic and Policy Research (CEPR), CEPR Reports and Issue Briefs. Many proponents of conservative fiscal policies talk of the budget deficit as being a matter of intergenerational equality. However, this paper shows the younger generations (and those yet to be born) will contribute more to the deficit than older generations. This analysis uses data from the CBO Long-Term Budget Outlook and the authors' calculations to show that the driving force behind the deficit is our broken health care system and that this should be the focus of the debate.
2009	J30	Baker, Dean, and John Schmitt. 2009. <i>The \$1 Trillion Wage Deficit</i>. Center for Economic and Policy Research (CEPR), CEPR Reports and Issue Briefs. The strong rise in the U.S. stock market since the spring and the return to positive economic growth in the third quarter of this year have created a consensus among economists that the Great Recession is very likely over. Unfortunately, the end of the official recession will have little visible impact on U.S. labor markets until almost 2012. Within that time, this paper estimates that U.S. workers will have lost over \$1 trillion in wages and salaries, \$150 billion more than the 10-year costs of proposed health care reform legislation.
2009	J80 J88	Schmitt, John. 2009. <i>Inequality as Policy: The United States Since 1979</i>. Center for Economic and Policy Research (CEPR), CEPR Reports and Issue Briefs. Since the end of the 1970s, the United States has seen a dramatic increase in economic inequality. While the United States has long been among the most unequal of the world's rich economies, the economic and social upheaval that began in the 1970s was a striking departure from the movement toward greater equality that began in the Great Depression, continued through World War II, and was a central feature of the first 30 years of the postwar period. This is not due to chance circumstances but is the direct result of a set of policies designed first and foremost to increase inequality.

2010	E13	Graves, Philip E. 2010. <i>Appropriate Fiscal Policy over the Business Cycle: Proper Stimulus Policies Can Work</i>. CESifo Group Munich, CESifo Working Paper Series: 3160. Fiscal policy has become quite controversial in the post-Keynesian era, the debate over the Obama stimulus package being a contentious recent example. Some pundits go so far as to take the position that macroeconomic theory has failed to meaningfully progress in terms of providing useful recommendations for policy-makers, particularly in times of recession. Others take the laissez-faire view that policy reactions to the business cycle do not help in a rational expectations world and indeed do harm by increasing uncertainty. Still others, while not necessarily viewing themselves as in any sense "Keynesian," have a nagging feeling that sometimes doing nothing must be worse than doing something--but what to do? Sensible guidance is provided here on how governments should spend taxpayer dollars and on how that spending should change under varying economic conditions. The nature of public goods, namely whether they are complements, substitutes, or neutral to private goods, is seen to be critical to such decisions.
2010	F44	Organisation for Economic Co-operation and Development. 2010. <i>OECD Economic Outlook 88</i>, Paris and Washington, D.C.: Organisation for Economic Co-operation and Development. Analyzes the current economic situation and examines the economic policies required to foster a sustained recovery in OECD member countries, covering the outlook to the end of 2012. Provides a general assessment of the macroeconomic situation. Discusses developments in individual OECD countries; developments in selected nonmember economies; and fiscal consolidation--requirements, timing, instruments, and institutional arrangements.
2010	F44	Sentance, Andrew. 2010. "Prospects for the British Economy after the Financial Storm." <i>Economic and Financial Modelling</i>, 17(4): 167-97. There are four main elements supporting the view that the UK economy is now moving out of recession and into the recovery phase of the cycle. (i) As a major trading nation, economic conditions in the UK are strongly influenced by the performance of other parts of the world economy. (ii) The improvement seen by a wide range of business surveys in the UK point to a positive growth picture. (iii) Indicators of consumer spending and confidence such as the CBI's Distributive Trades Survey have signalled a return to growth. (iv) The sharp increases in unemployment recorded in the UK in late 2008 and earlier in 2009 eased dramatically towards late 2009. Nevertheless, the author argues that a key issue for UK economic prospects is the pace of the global economic recovery.

2011	E02 L50 L93 N75 O43	Herd, Richard, Paul Conway, Sam Hill, Vincent Koen, and Thomas Chalaux. 2011. <i>Can India Achieve Double-digit growth ?</i> . OECD Publishing, OECD Economics Department Working Papers: 883. In recent years, India has enjoyed one of the highest growth rates worldwide, weathering the global financial crisis better than many other countries. Prudent macroeconomic policies will be critical to prolonging the current expansion, given the risks associated with high inflation and volatile capital flows. A steadfast commitment to fiscal consolidation is needed to continue to reduce the large deficit that emerged in the aftermath of the slowdown and avoid crowding out private investment. Stepping up structural reforms will also be necessary if double-digit growth rates are to be achievable over the coming decade or so. Indeed, the operating environment for private business remains challenging. While infrastructure is improving in key sectors, partly thanks to greater private investment, bottlenecks endure and efforts to intensify competition and ensure continued strong investment are required. Labour market reforms are also required to promote job creation. Rapid economic development has boosted living standards and reduced poverty but poverty remains high. There is a need to strengthen social welfare systems and access to health and education to ensure widespread benefits from continued high growth. This Working Paper relates to the 2011 OECD Economic Survey of India (www.oecd.org/eco/surveys/india)
2011	E69 H53 H72 H74 H81 H83	Herd, Richard, Sam Hill, and Vincent Koen. 2011. <i>Fiscal Prospects and Reforms in India</i> . OECD Publishing, OECD Economics Department Working Papers: 911. Substantial fiscal consolidation was achieved under the aegis of the 2003 Fiscal Responsibility and Budget Management Act. While deficits widened anew in 2008 and 2009, against the backdrop of the global financial and economic crisis, efforts to reduce them have resumed since. To ensure continued progress, as well as stronger government finances in the longer term, the medium-term fiscal framework needs to be improved, notably by embedding the annual budget in a detailed three-year rolling programme. Expenditure needs to be controlled better, in particular as regards subsidies, which the central government has indeed been trying to rein in, though with difficulty in the face of rising world oil prices. Expenditure also needs to become more effective, in particular in the areas of health care, education and social assistance. On the revenue side, tax reforms have been tabled, both for direct taxes and for the complex and inefficient system of indirect taxes. Corporate income tax rates are being cut, though the headline rate remains high. Lower taxation for large special economic zones deserves to be maintained for some time. For the personal income tax, which only a fairly small proportion of the population pays, thresholds are set to be raised considerably. A goods and services tax is to be introduced, which should help reduce the segmentation of the national market for goods and services. Customs duties have been reduced on average but remain high for some categories of imports, implying scope for further reduction over time.

2011	F52	Luparelli Mathieu, Miguel S., and Andres Montero Gomez. 2011. "Inteligencia prospectiva de seguridad economica. (With English summary)." <i>Ekonomiaz</i> , 0(76): 38-63. World economic crisis has caused instability and insecurity in a way that Human Security was seriously challenged. Information failures as well as the incapacity to estimate an instable future has proved the needs for tools to estimate the future. Complexity within the international system makes unavoidable the existence of some unmeasurable uncertainty. Fortuitous events, or accidents, are one of the main future threats to world economic stability and security. The States are competing within the market against business companies for the benefits of strategic resources. Business intelligence and prospective (as a complementary discipline) are both necessary tools to compete in such a complex system.

2011	I23 I25	Lim, Teck Ghee. 2011. "Malaysia Today: Lagging Economy and Ailing Higher Education System." <i>Asian Economic Papers</i> , 10(1): 139-56. The Malaysian economy has lost economic dynamism since 2000. As education is inextricably linked with the generation of employment and the growth of income, we examine some of the major developments and outcomes in the country's higher education system and raise questions about its effectiveness in helping to generate economic growth. We find the general performance of the Malaysian higher education sector to be dismal, and we attribute this negative outcome to the use of the higher education sector by the Malaysian government as a major policy instrument to force socioeconomic restructuring along racial lines in the last 40 years.

Year	DE	Title and Abstract
2012	H87 N94	Shelburne, Robert. 2012. <i>Restoring Stability to Europe</i> . UNECE, ECE Discussion Papers Series: 2012_3. The eurozone is in political and economic crisis. This is due to the inadequate design of the institutional structure of the eurozone and to the current poor implementation of macroeconomic policy. In designing the eurozone, well established principles of economics were ignored and major decisions were based primarily upon political considerations. Thus it was only a matter of time before these defects would become apparent. In addressing the current crisis that has developed policy makers have misdiagnosed the causes of the crisis and implemented solutions that are largely counterproductive to solving it. This paper describes the underlying factors that led to the inadequate design and improper macroeconomic response and explains what will be necessary in order to create an institutional structure and macroeconomic policy framework that can restore economic stability and growth to the region.

2012	O31	Gordon, Robert J. 2012. <i>Is U.S. Economic Growth Over? Faltering Innovation Confronts the Six Headwinds</i> . National Bureau of Economic Research, Inc. NBER Working Papers: 18315. This paper raises basic questions about the process of economic growth. It questions the assumption, nearly universal since Solow's seminal contributions of the 1950s, that economic growth is a continuous process that will persist forever. There was virtually no growth before 1750, and thus there is no guarantee that growth will continue indefinitely. Rather, the paper suggests that the rapid progress made over the past 250 years could well turn out to be a unique episode in human history. The paper is only about the United States and views the future from 2007 while pretending that the financial crisis did not happen. Its point of departure is growth in per-capita real GDP in the frontier country since 1300, the U.K. until 1906 and the U.S. afterwards. Growth in this frontier gradually accelerated after 1750, reached a peak in the middle of the 20th century, and has been slowing down since. The paper is about "how much further could the frontier growth rate decline?" The analysis links periods of slow and rapid growth to the timing of the three industrial revolutions (IR's), that is, IR #1 (steam, railroads) from 1750 to 1830; IR #2 (electricity, internal combustion engine, running water, indoor toilets, communications, entertainment, chemicals, petroleum) from 1870 to 1900; and IR #3 (computers, the web, mobile phones) from 1960 to present. It provides evidence that IR #2 was more important than the others and was largely responsible for 80 years of relatively rapid productivity growth between 1890 and 1972. Once the spin-off inventions from IR #2 (airplanes, air conditioning, interstate highways) had run their course, productivity growth during 1972-96 was much slower than before. In contrast, IR #3 created only a short-lived growth revival between 1996 and 2004. Many of the original and spin-off inventions of IR #2 could happen only once--urbanization, transportation speed, the freedom of females from the drudgery of carrying tons of water per year, and the role of central heating and air conditioning in achieving a year-round constant temperature. Even if innovation were to continue into the future at the rate of the two decades before 2007, the U.S. faces six headwinds that are in the process of dragging long-term growth to half or less of the 1.9 percent annual rate experienced between 1860 and 2007. These include demography, education, inequality, globalization, energy/environment, and the overhang of consumer and government debt. A provocative "exercise in subtraction" suggests that future growth in consumption per capita for the bottom 99 percent of the income distribution could fall below 0.5 percent per year for an extended period of decades.
2012	R40	Akhalumeh, Paul. 2012. "Nigeria's Vision 20:2020: A Myth or a Reality?" <i>African Journal of Economic and Sustainable Development</i> , 1(2): 179-92. Nigeria aspires to be among the top 20 economies in the world come year 2020 - Vision 20:2020. This study examines the aspiration, encoded Vision 20:2020. The aim is to determine if the country has sufficient capacity to catapult its economy from its current 41st position to within 20 come year 2020. This study is relevant because it will show to policy makers how priorities should be set so as to be able to provide the basis for the take-off needed by the Nigerian economy. Data collection in this study was done using the secondary source. Data analysis is done using percentages. The study reveals that Nigerian economy is far too backward to aspire to be among the top 20 economies by year 2020; and that the Nigerian infrastructure is too deficient to be able to support the vision. It is therefore recommended that Nigeria should take urgent steps to upgrade its infrastructure to be able to take its pride of place, and that Nigeria should take concerted steps to build its institutions to be able to support sustainable development.

Year	DE	Title and Abstract
2013	D57	Wang, J. Christina. 2013. <i>The cost of fiscal policy uncertainty: industry evidence of its impact on the labor market</i>. Federal Reserve Bank of Boston, Working Papers: 13-22. The anemic pace of the recovery of the U.S. economy from the Great Recession has frequently been blamed on heightened uncertainty, much of which concerns the nation's fiscal policy. Intuition suggests that increased policy uncertainty likely has different impacts on industries with different exposure to government actions. Such heterogeneity can help identify the effect of shocks due to policy uncertainty. This study uses industry data to explore whether policy uncertainty indeed affects the dynamics of employment during this recovery, and particularly whether it has a differential impact on employment across industries. This analysis focuses on heterogeneity across industries in terms of the fraction of their product demand that can ultimately be attributed to federal government expenditures. The estimation results reveal that policy uncertainty indeed retards employment growth more in industries that rely more heavily on federal government demand: the growth rate in the number of production employees in these industries appears to have been four-tenths of a percentage point lower during the quarters in recent years when policy uncertainty spiked. A similar impact is found for the growth of total employment, which also includes nonproduction employees. In addition, the evidence suggests that increased policy uncertainty renders firms more reluctant to adjust the number of employees in response to changes in output, a contributing factor to the sluggish recovery in employment. Moreover, this damping effect is stronger for industries with higher shares of output sold directly and indirectly to the federal government. By comparison, the adverse effect of heightened policy uncertainty on average weekly hours differs little across industries.
2013	E16	Suslov, N. I. 2013. "UN Project Future of the World Economy: What Did Not Come True? [2011]." <i>Problems of Economic Transition</i>, 56(1): 53-68. The article is devoted to an analysis of long-term forecasting based on input-output models. The base scenarios for world economic development constructed within the framework of the well-known United Nations forecasting project of the 1970s, Future of the World Economy, are discussed. Substantiation is given to the idea that the main reason why the forecast deviated from the actual development parameters for regions of the world is that institutional threats in countries of Africa and Latin America and in the Soviet Union and Eastern Europe were underestimated. Another reason is the failure to adequately take into account the effect of the energy crisis. The main conclusion is that experts involved in forecasting are able to foresee development possibilities better than threats.
2013	G31	Falk, Martin, Andrea Kunnert, and Gerhard Schwarz. 2013. "2013 Ausweitung der Investitionen in der Sachgütererzeugung--Bauunternehmen erwarten Stagnation: Ergebnisse des WIFO-Investitionstests vom Herbst 2013. (Investment Is Expected to Increase in Manufacturing in 2013: While Construction Firms Expect a Decrease: Results of the WIFO Autumn 2012 Investment Survey. With English summary.)" <i>WIFO-Monatsberichte</i>, 86(1): 81-88. According to the results of WIFO's Autumn 2012 Investment Survey, investment in manufacturing (in current prices) will increase by 13 percent in 2013. The largest rise is expected for producers of consumer goods, followed by investment goods. Manufacturers of intermediates expect a decrease in investment. Construction firms expect practically no change in investment as compared to the previous year.

Table E69.F Examples of Publications according to New Links in 2006—2013

Year	DE	Title and Abstract
2006		
2006	H20 H50 H60	Kremer, Jana, Claudia Rodrigues Braz, Teunis Brosens, Geert Langenus, Sandro Momigliano, and Mikko Spolander. 2006. <i>A disaggregated framework for the analysis of structural developments in public finances</i> . European Central Bank, Working Paper Series: 579. In this paper, we present a disaggregated framework for the analysis of past and projected structural developments in the most relevant revenue and expenditure categories and the fiscal balance. The framework, in particular, distinguishes between the effects of discretionary fiscal policy and of macroeconomic and other developments and is sufficiently standardised to be used in multi-country studies. Here, it is applied to Belgium, Finland, Germany, Italy, the Netherlands and Portugal over the period 1998 to 2004. During this period the structural primary balance ratio clearly worsened in all countries except Finland. In Belgium, Italy and the Netherlands, both revenue and expenditure contributed to the deterioration of the structural primary balance. In Germany the large deterioration in revenue was partially offset by the decline in the structural primary expenditure ratio, while the opposite was true for Portugal. The analysis highlights the various factors that contributed to these developments.
2010		
2010	E31 E32 E60 E61 E62 E64 O40	Nersisyan, Yeva, and L. Randall Wray. 2010. <i>Does Excessive Sovereign Debt Really Hurt Growth? A Critique of This Time Is Different, by Reinhart and Rogoff</i> . Levy Economics Institute, The Economics Working Paper Archive. The worst global downturn since the Great Depression has caused ballooning budget deficits in most nations, as tax revenues collapse and governments bail out financial institutions and attempt countercyclical fiscal policy. With notable exceptions, most economists accept the desirability of expansion of deficits over the short term but fear possible long-term effects. There are a number of theoretical arguments that lead to the conclusion that higher government debt ratios might depress growth. There are other arguments related to more immediate effects of debt on inflation and national solvency. Research conducted by Carmen Reinhart and Kenneth Rogoff is frequently cited to demonstrate the negative impacts of public debt on economic growth and financial stability. In this paper we critically examine their work. We distinguish between a nation that operates with its own floating exchange rate and nonconvertible (sovereign) currency, and a nation that does not. We argue that Reinhart and Rogoff's results are not relevant to the case of the United States.
2010	E41	Fischer, Andreas M. 2010. <i>Immigration and large banknotes</i> . Swiss National Bank, Working Papers: 2010-17. Do immigrants have a higher demand for large denominated banknotes than natives? This micro study examines whether cash orders for CHF 1,000 notes, a banknote used for storage purposes, is concentrated in Swiss municipalities with a high foreign-to-native ratio. Controlling for a range of regional indicators across 251 Swiss municipalities, European immigrants in Switzerland are found to hoard less CHF 1,000 banknotes than natives. This result says that immigration reduces seigniorage (per person) as measured by currency orders. A 1% increase in the immigrant-to-native ratio is coincident with a reduction in currency orders by CHF 4,000. The dampening effect is attributed to specific traits linked to immigrants.

Year	DE	Title and Abstract
2011	E65 E66 H51 H53 H54 H55 H70 H71 H72 H74 H81 H83 I18 I32 I38 O23 O53	Herd, Richard, Sam Hill, and Vincent Koen. 2011. <i>Fiscal Prospects and Reforms in India</i> . OECD Publishing, OECD Economics Department Working Papers: 911. Substantial fiscal consolidation was achieved under the aegis of the 2003 Fiscal Responsibility and Budget Management Act. While deficits widened anew in 2008 and 2009, against the backdrop of the global financial and economic crisis, efforts to reduce them have resumed since. To ensure continued progress, as well as stronger government finances in the longer term, the medium-term fiscal framework needs to be improved, notably by embedding the annual budget in a detailed three-year rolling programme. Expenditure needs to be controlled better, in particular as regards subsidies, which the central government has indeed been trying to rein in, though with difficulty in the face of rising world oil prices. Expenditure also needs to become more effective, in particular in the areas of health care, education and social assistance. On the revenue side, tax reforms have been tabled, both for direct taxes and for the complex and inefficient system of indirect taxes. Corporate income tax rates are being cut, though the headline rate remains high. Lower taxation for large special economic zones deserves to be maintained for some time. For the personal income tax, which only a fairly small proportion of the population pays, thresholds are set to be raised considerably. A goods and services tax is to be introduced, which should help reduce the segmentation of the national market for goods and services. Customs duties have been reduced on average but remain high for some categories of imports, implying scope for further reduction over time.
2013		
2013	E44	Takamura, Tamon. 2013. <i>A General Equilibrium Model with Banks and Default on Loans</i> . Bank of Canada, Working Papers. During the recent financial crisis in the U.S., banks reduced new business lending amidst concerns about borrowers' ability to repay. At the same time, firms facing higher borrowing costs alongside a worsening economic outlook reduced investment. To explain these aggregate business cycle patterns, I develop a model with households, banks and firms. I assume that a bank's ability to raise deposits is constrained by a limited commitment problem and that, furthermore, loans to firms involve default risk. In this environment, changes in loan rates affect the size of the business sector. I explore how banks influence the behavior of households and firms and find that both productivity and financial shocks lead to counter-cyclical default and interest rate spreads. I examine the implications of a government capital injection designed to mitigate the effect of negative productivity and financial shocks in the spirit of the Troubled Asset Relief Program (TARP). I find that the stabilizing effect of such policy interventions hinges on the source of the shock. In particular, a capital injection is less effective against aggregate productivity shocks because easing banks' lending stance only weakly stimulates firms' demand for loans when aggregate productivity falls. In contrast, a capital injection can counteract the adverse effect of financial shocks on the supply of loans. Finally, I measure aggregate productivity and financial shocks to evaluate the role of each in the business cycle. I find that the contribution of aggregate productivity shocks in aggregate output and investment is large until mid-2008. Financial shocks explain 65% of the fall in investment and 55% of the fall in output in the first quarter of 2009.

E69: Balance of Links

10	Links in 2005
29	New links in 2006-2013
783	Potential links at the end of 2013
822	Total

The date of final verification: November 22, 2017.

E69 — Contributors — Авторы

Lychagin, Anton M. — Лычагин Антон Михайлович — 0.2 AS²;

Lychagin, Dmitry M. — Лычагин Дмитрий Михайлович — 0.2 AS;

Lychagin, Mikhail V. — Лычагин Михаил Васильевич — 0.2 AS.

The total volume of derivative works for E69 is equal to 0.6 AS.

Общий объем раздела E69 — 0,6 авторских (уч.-изд.) л.

² AS — Author's Sheet — unit of measuring the volume of a literary work; equal to 40,000 characters (including the spaces between words), or 3,000 sq cm of illustrations (maps) like the table E69.E.

This section presents a generalization of the information for all 45 micro categories that belong to the JEL macro category E (see appendix C).

Table A1 includes the following indicators:

DE — the JEL codes of micro categories.

N05 — the numbers of records in EconLit (one record reflects one publication) for the 1991–2005, which contain in the field DE the JEL code shown in column “DE”.

N13 — the same as N05 for the 1991–2013.

$D = N13 - N05$ — the increase of publications in 2006–2013.

$T = N13 / N05$ — the growth rate in relation to the level of 2005.

N05S — the indicator of N05 with the addition the numbers of intersections of the JEL code shown in column “DE” with the rest of 821 JEL classification codes for the 1991–2005.

N13S — the same as N05S for the 1991–2013.

Similarly $DS = N13S - N05S$;

$TS = N13S / N05S$.

$K05 = N05S / N05$ and $K13 = N13S / N13$ — the number of JEL codes per publication with the code in the DE line for 1991–2005, and for 1991–2013, respectively.

The numbers in the row “S” in the columns N05, N13, D, N05S, N13S, and DS show the sums of values of appropriate indicators for all codes in the column DE. The numbers in the row “S” in the columns T, TS, K05 and K13 show the respective average values.

The color turquoise labels the cells with the values that are more than 1,000. Values in excess of 10 thousand units are marked in bold. The color green marks the growth rates values that are above average values shown in the row “S”. We used the bold font for the values in columns K05 and K13 that exceed three.

The largest number of publications at the End of 2013 falls on the micro category E52 Monetary Policy. The category E32 Business Fluctuations, Cycles holds the second place. The category E31 Price Level, Inflation, Deflation holds the third place.

The largest rates of growth belong to the categories E02 Institutions and the Macroeconomy, E23 Production, and E44 Financial Markets and the Macroeconomy. There was a noticeable increase in the shares of these micro categories in 2006–2013.

Only two micro categories (E02 and E39) have more than four links with the other subject micro categories at the end of 2005. We see that 12 micro categories (E02, E16, E22, E23, E26, E27, E39, E44, E62, E63, E65, and E69) have more than four links at the end of 2013 (see indicators K05 and K13).

Данный раздел содержит сводную информацию по всем 45 микрокатегориям, принадлежащим JEL-макрокатегории E (см. приложение C).

Таблица A1 включает следующие показатели:

DE — JEL коды микрокатегорий.

N05 — число записей в EconLit (одна запись отражает одну публикацию) за 1991–2005 гг., которые содержат в поле DE JEL-код, указанный в столбце “DE”.

N13 — то же, что и N05 для 1991–2013 гг.

$D = N13 - N05$ — прирост публикаций в 2006–2013 гг.

$T = N13 / N05$ — темп роста числа публикаций по отношению к уровню 2005 года.

N05S — показатель N05 с добавлением числа пересечений JEL-кода, указанного в столбце “DE”, с остальными 821 кодами классификации JEL за 1991–2005 гг.

N13S — то же, что и N05S для 1991–2013 гг.

Аналогично $DS = N13S - N05S$;

$TS = N13S / N05S$.

$K05 = N05S / N05$ и $K13 = N13S / N13$ — число кодов JEL в расчете на одну публикацию с кодом в строке DE за 1991–2005 гг. и 1991–2013 гг., соответственно.

Числа в строке “S” в столбцах N05, N13, D, N05S, N13S и DS показывают суммы значений соответствующих показателей по всем кодам в столбце DE. Числа в строке “S” в столбцах T, TS, K05 и K13 показывают соответствующие средние значения.

Бирюзовый цвет помечает ячейки, значения в которых больше 1000. Среди них жирным шрифтом выделены значения, превышающие 10 тысяч единиц. Зеленый цвет указывает на темпы роста, которые выше средних значений в строке “S”.

Жирным шрифтом в столбцах K05 и K13 выделены значения, которые больше трех.

Наибольшее число публикаций в конце 2013 г. приходится на категорию E52 Монетарная политика. На втором месте находится категория E32 Колебания деловой активности; циклы. Категория E31 Уровень цен, инфляция, дефляция занимает третье место.

Наибольшие темпы роста принадлежат категориям E02 Институты и макроэкономика, E23 Макроэкономика: производство и E44 Финансовые рынки и макроэкономика. В течение 2006–2013 гг. произошло заметное увеличение удельного веса этих микрокатегорий.

Только две микрокатегории (E02 и E39) в конце 2005 г. имели четыре и более связей с другими предметными микрокатегориями. Мы видим, что на конец 2013 г. микрокатегорий с более чем четырьмя связями стало 12: E02, E16, E22, E23, E26, E27, E39, E44, E62, E63, E65 и E69 (см. показатели K05 и K13).

Indicators N05, N13, N05S, and N13S in the Table A2 are identical to those given in Table A1.

The number in column DN05 indicates the share (in percent), which the micro category with code in column DE and the value, shown in the column N05, has in the sum, which is allocated in the cell in row S and in the column N05. We defined the numbers in column DN13 in a similar manner using the data shown in the column N13. Indicator DDN = DN13 – DN05 shows the change of micro categories shares by the end of 2013.

Indicators in columns DS05, DS13 and DDS are calculated in a similar manner to the values shown in the columns N05S and N13S.

The color turquoise labels the cells with the values that are more than 1,000 (like in the Table A1). The color green marks the cells for micro categories with the positive DDN and DDS.

В таблице A2 показатели N05, N13, N05S и N13S идентичны тем, которые приведены в таблице A1.

Число в столбце DN05 показывает долю (в процентах), которая приходится на микрокатегорию с кодом в столбце DE, исчисленную исходя из суммы, приведенной в строке S и столбце N05. Число в столбце DN13 определено аналогичным образом для данных, приведенных в столбце N13. Показатель DDN = DN13 – DN05 показывает изменение удельного веса микрокатегории к концу 2013 года. Показатели в столбцах DS05, DS13 и DDS исчислены аналогичным образом для значений, приведенных в столбцах N05S и N13S.

Как и в таблице A1 бирюзовым цветом помечены ячейки, числа в которых больше 1000. Зеленым цветом помечены ячейки для микрокатегорий с DDN и DDS больше нуля.

Table A2. The Structure of the Macro Category E by the End of 2005 and 2013

Таблица A2. Структура макрокатегории E на конец 2005 и 2013 годов

The following are the results of the ranking of micro categories in descending order of relevant indicators in the tables A1 and A2.

Далее приведены результаты ранжирования микрокатегорий в порядке убывания соответствующих показателей в таблицах А1 и А2.

N05: E52(9,987), E31(9,274), E32(8,244), E24(7,762), E62(7,580), E58(4,703), E43(4,563), E22(4,134), E21(3,813), E44(3,103), E42(2,628), E10(2,359), E51(2,347), E12(2,274), E66(2,130), E63(2,064), E41(1,804), E23(1,769), E40(1,453), E60(1,351), E50(1,258), E17(1,221), E65(1,163), E61(1,004), E13(986), E20(811), E37(795), E30(759), E25(754), E11(672), E00(618), E64(375), E01(370), E27(369), E26(367), E47(207), E19(46), E49(17), E59(15), E39(13), E29(9), E69(8), E02(1), E03(0), E16(0).

N13: E52(21,821), E32(21,046), E31(18,777), E62(15,214), E24(14,568), E23(12,872), E44(12,344), E43(10,333), E58(10,211), E22(7,850), E21(7,657), E42(4,520), E12(4,506), E51(3,994), E63(3,641), E66(3,323), E10(2,701), E13(2,670), E41(2,614), E60(2,382), E40(2,317), E65(2,224), E37(1,988), E50(1,939), E17(1,779), E61(1,778), E25(1,518), E01(1,440), E20(1,382), E30(1,369), E27(1,307), E26(1,243), E00(1,134), E11(870), E47(524), E64(487), E02(438), E16(95), E19(52), E59(27), E39(23), E49(22), E69(16), E29(13), E03(4).

The Table A3 permits to compare the processes of emergence and evolution of new links in 2006–2013 for all micro categories that belong the general category F. The data was extracted from the tables of the types “E” and “Balance of Links”. Bellow the Table A3 we can see d the results of the ranking of micro categories in descending order of relevant indicators.

L05 — the sum of new links that the micro category with the code in the column DE created with the other JEL micro categories within 1991–2005.

NLS — the sum of new links that the micro category with the code in the column DE created with the other JEL micro categories within 2006–2013.

L13 = L05 + NLS — the sum of new links within 1991–2013.

TN = NLS / L05 — the increase rate of new links.

PL — the sum of potential new links at the end of 2013 because of 822 micro codes of JEL classification.

Таблица А3 позволяет сравнить, как происходило возникновение и развитие новых связей в 2006—2013 гг. для всех микрокатегорий, входящих в макрокатегорию F. Данные взяты из таблиц типа “E” и “Баланс связей”. После таблицы приведены результаты ранжирования микрокатегорий в порядке убывания значений соответствующих показателей.

L05 — сумма новых связей, которые микрокатегория с кодом в столбце DE создала с другими JEL-микрокатегориями в 1991–2005 гг.

NLS — сумма новых связей, которые микрокатегория с кодом в столбце DE создала с другими JEL-микрокатегориями в 2006–2013 гг.

L13 = L05 + NLS — сумма новых связей за 1991–2013 гг.

TN = NLS / L05 — темп прироста новых связей.

PL — сумма потенциальных новых связей на конец 2013 г. на основе 822 микрокодов классификации JEL.

Table A3. Emergence and Evolution of New Links in 2006–2013 in All Micro Categories of the Macro Category E**Таблица А3.** Возникновение и развитие новых связей в 2006–2013 гг. во всех микрокатегориях категории E

DZ = L13/822, DN = PL/822 — the shares of created and potential new links at the end of 2013.

NFL05 — the sum of first publications with new links (the sum of values within 1991–2005).

DZ = L13/822, DN = PL/822 — доли созданных и потенциальных новых связей на конец 2013 г.

NFL05 — число первых публикаций с новыми связями, образованными в 1991–2005 гг.

NPNL — the total number of publications with new links that the micro category with the code in the column DE created with the other JEL micro categories within 2006—2013.

NPNF — the sum of first publications with new links within 2006—2013 ($NPNF < NPNL$).

NFL13 = **NFL05** + **NPNF** — the sum of first publications with new links within 1991—2013.

N1L05 = **NPL05/L05** — the number of first publications with new links created within 1991—2005, per new link created within 1991—2005.

N1PNF = **NPNF** / **NLS** — the number of first publications with new links created within 2006—2013, per new link created within 2006—2013.

N1L13 = **NFL13** / **L13** — the number of first publications with new links created within 2006—2013, per new link created within 2006—2013.

The numbers in the row “S” show the sums for all codes in columns L05, NLS, L13, NFL05, NPNL, NPNF, and NFL13. We give the respective average values in the other columns in the row “S”.

The color turquoise labels the cells with the values that are more than 1,000 (like in the Table A1).

The color green marks the cells for micro categories that values exceed the average value in the row “S”.

NPNL — общее число публикаций с новыми связями, которые микрокатегория с кодом в столбце DE создала с другими JEL-микрокатегориями в 2006—2013 гг.

NPNF — сумма первых публикаций с новыми связями в 2006—2013 гг. ($NPNF < NPNL$).

NFL13 = **NFL05** + **NPNF** — сумма первых публикаций с новыми связями в 1991—2013 гг.

N1L05 = **NPL05/L05** — число первых публикаций с новыми связями, образованными в 1991—2005 гг. в расчете на одну новую связь в 1991—2005 гг.

N1PNF = **NPNF** / **NLS** — число первых публикаций с новыми связями, образованными в 2006—2013 гг. в расчете на одну новую связь 2006—2013 гг.

N1L13 = **NFL13** / **L13** — число первых публикаций с новыми связями, образованными в 1991—2013 гг. в расчете на одну новую связь 1991—2013 гг.

В строке “S” по столбцам L05, NLS, L13, NFL05, NPNL, NPNF, NFL13 приведены суммы по всем микрокатегориям. Соответствующие средние значения даны в других столбцах в строке “S”.

Бирюзовым цветом помечены ячейки, числа в которых больше 1000 (как и в таблице A1). Зеленым цветом выделены ячейки, значения в которых превышают средние значения, указанные в строке “S”.

L05: E32(513), E24(478), E22(457), E31(457), E62(457), E52(417), E21(395), E10(386), E60(346), E23(327), E58(314), E66(304), E42(298), E63(298), E43(295), E44(293), E61(282), E12(280), E51(278), E20(277), E65(275), E40(270), E13(244), E30(238), E50(234), E41(227), E25(225), E17(217), E00(212), E64(202), E11(193), E01(180), E26(178), E27(157), E37(150), E47(80), E19(57), E49(33), E39(30), E29(14), E59(11), E69(10), E02(7), E03(0), E16(0).

At the end of current section we give the list of publication that created in 2006–2013 six and more new links with the micro categories that belong to the macro category F, as well as with the other micro categories (see the list of codes in the round brackets).

В завершение данного раздела приведем перечень публикаций, которые в 2006–2013 гг. образовали шесть и более новых связей как с микрокатегориями, входящими в макрокатегорию F, так и с другими микрокатегориями (см. коды в круглых скобках).

Appendix B1. Atlas Tables Guide¹

About JEL subject classification

JEL subject classification at the end of 2013 included 20 General Categories (<https://www.aea-web.org/econlit/jelCodes.php>). Each general category had the name and the code labeled by one English letter. The general category “E” had the name “Macroeconomics and Monetary Economics”. This volume has the number “5”, which is appended to the JEL category “E”.

For our convenience, we use the term “macro” instead of “general” when we consider 20 general categories of JEL classification.

Each scientific classification is the method for division (demarcation, separation, sharing) the whole subject area of a certain science (in our case this science is economics) into a set of parts (regions, fields, etc.). From this standpoint, we consider JEL category “E” as macro field of economics or economic research.

We use the codes and the names of JEL macro categories in the tables with label “A”.

JEL classification shares macro category “E” into seven *meso* categories with corresponding names and the codes, which include the letter of macro category and one Arabic numeral. There were 127 meso categories at the end of 2013.

We use the codes and the names of JEL meso categories in the tables with label “B”.

JEL classification shares the most of meso categories into a few (from one to ten) *micro* categories with corresponding names and the codes, which include the code of meso category and one Arabic numeral for denotation of micro category. You can see the codes and the names of the 7 meso and 45 micro categories for the macro category “E” in the following table.

Codes and Names of JEL Categories
E0 General for Macro Category E
E00 General
E01 Measurement and Data on National Income and Product Accounts and Wealth • Environmental Accounts
E02 Institutions and the Macroeconomy
E03 Behavioral Macroeconomics
E1 General Aggregative Models
E10 General
E11 Marxian • Sraffian • Institutional • Evolutionary
E12 Keynes • Keynesian • Post-Keynesian
E13 Neoclassical
E16 Social Accounting Matrix
E17 Forecasting and Simulation: Models and Applications
E19 Other
E2 Consumption, Saving, Production, Investment, Labor Markets, and Informal Economy
E20 General
E21 Consumption • Saving • Wealth
E22 Capital • Investment • Capacity
E23 Production
E24 Employment • Unemployment • Wages • Intergenerational Income Distribution • Aggregate Human Capital
E25 Aggregate Factor Income Distribution
E26 Informal Economy • Underground Economy
E27 Forecasting and Simulation: Models and Applications
E29 Other
E3 Prices, Business Fluctuations, and Cycles
E30 General
E31 Price Level • Inflation • Deflation

Codes and Names of JEL Categories
E32 Business Fluctuations • Cycles
E37 Forecasting and Simulation: Models and Applications
E39 Other
E4 Money and Interest Rates
E40 General
E41 Demand for Money
E42 Monetary Systems • Standards • Regimes • Government and the Monetary System • Payment Systems
E43 Interest Rates: Determination, Term Structure, and Effects
E44 Financial Markets and the Macroeconomy
E47 Forecasting and Simulation: Models and Applications
E49 Other
E5 Monetary Policy, Central Banking, and the Supply of Money and Credit
E50 General
E51 Money Supply • Credit • Money Multipliers
E52 Monetary Policy
E58 Central Banks and Their Policies
E59 Other
E6 Macroeconomic Policy, Macroeconomic Aspects of Public Finance, and General Outlook
E60 General
E61 Policy Objectives • Policy Designs and Consistency • Policy Coordination
E62 Fiscal Policy
E63 Comparative or Joint Analysis of Fiscal and Monetary Policy • Stabilization • Treasury Policy
E64 Incomes Policy • Price Policy
E65 Studies of Particular Policy Episodes
E66 General Outlook and Conditions
E69 Other

The current JEL subject classification appeared in 1991. At the beginning, it included 627 micro categories. The number of micro fields reached 757 to the end of 2005. There were 822 micro categories at the end of 2013.

Each publication in the electronic bibliography EconLit has a set of special fields in order to describe the important features of publication. The field DE (“Description”) contains information about JEL micro subject categories, which covers publication.

There are two types of the content in the DE field:

With a single JEL micro code.

With a few codes.

Let us consider for illustration the EconLit records with code E10.

Here is an example with a single code, E10:

TI: Essays in Macroeconomics

AU: Hornstein, Andreas

SO: Ph.D. University of Minnesota 1991

PY: 1991

DE General Aggregative Models: General E10

There were 130 records with the code E10 at the end of 1991. Some records have a few subject codes in the field DE (see examples):

Two codes

TI: Dynamic (S,s) Economies

AU: Caballero, Ricardo J.; Engel, Eduardo M. R. A.

SO: National Bureau of Economic Research, Inc, NBER Working Papers: 3734, 1991, pp.

AV: <http://www.nber.org/papers/w3734.pdf>

DT: Working Paper

PY: 1991

DE: General Aggregative Models: General E10; Consumption, Saving, Production, Investment, Labor Markets, and Informal Economy: General (includes Measurement and Data) E20

Three codes

TI: The Scientific Illusion in Empirical Macroeconomics: Comment
 AU: Gottfries, Nils
 AF: Institute for International Econ Studies, Stockholm
 SO: New approaches to empirical macroeconomics, 1991, pp. 21-26
 PB: Oxford and Cambridge: Blackwell
 DT: Collective Volume Article
 PY: 1991
 ED: Hylleberg, Svend; Paldam, Martin, eds.
**DE: General Aggregative Models: General E10;
 Economic Methodology B41;
 Econometric Modeling: General C50**

Four codes

TI: Treatment of Deep-Discounted and Index-Linked Bonds in the National Accounts
 AU: Newson, Brian; Brodersen, Soren
 AF: EUROSTAT; Danmarks Statistik
 SO: The IMF's statistical systems in context of revision of the United Nations' A System of National Accounts, 1991, pp. 483-504
 PB: Washington, D.C.: International Monetary Fund
 IB: 1-55775-159-5
 DT: Collective Volume Article
 PY: 1991
 ED: Galbis, Vicente, ed.
**DE: General Aggregative Models: General E10;
 Methodology for Collecting, Estimating, and Organizing Macroeconomic Data; Data Access C82;
 General Financial Markets: General (includes Measurement and Data) G10;
 Accounting and Auditing: General M40**

Theoretically, micro category E10 had possibility to form 626 links with other micro categories that were in JEL classification in 1991. But de facto there were the following 59 links: C82(23), C50(14), B41(8), E17(8), C32(7), E32(7), Q20(7), Q30(6), C11(3), D31(3), E20(3), E24(3), M40(3), A20(2), B20(2), C22(2), C52(2), C80(2), E12(2), E30(2), E37(2), F10(2), F31(2), H60(2), L80(2), C10(1), D13(1), D40(1), D50(1), D90(1), E13(1), E22(1), E23(1), E40(1), E66(1), F14(1), F20(1), F32(1), F33(1), F34(1), G10(1), G12(1), G15(1), G30(1), H00(1), H10(1), H30(1), H61(1), H63(1), O10(1), O41(1), O47(1), O49(1), O50(1), O57(1), P24(1), P33(1), P52(1), R20(1).

The numbers in round brackets point to the number of EconLit records which have the code E10 and the corresponding second code in DE field. It is possible to use these numbers as a **measure of link intensity (strength)**. We see that the most intensive (strong) link was between E10 and C82 (23 units). The second place holds the link between E10 and C50 (14 units).

We shall denote the mentioned 59 links as *existing links* at the end of 1991. If you add a link E10 code itself, then we have 60 links. The remaining 566 (626 – 60) are *potential new links* with the code E10 at the end of 1991.

The search with EconLit shows 144 new publication with the code E10 in 1992. One part of these records has a single code E10 in DE field. The second part contains the same links that were observed in 1991. The third part includes 73 **new links** with the codes from the list “Potential new links”: B12, B14, B22, B30, B40, C43, C51, C53, C62, C83, C92, D00, D10, D20, D51, D57, D60, D62, D63, D70, D80, D84, D91, E19, E31, E41, E47, E51, E52, E61, E62, F01, F36, H26, H56, I21, I31, I32, J10, J16, J22, J23, J24, J50, J60, L11, L13, L30, L60, L72, L90, M41, N11, N12, N14, N15, N17, O11, O14, O15, O19, O23, O32, O40, P10, P21, Q10, Q23, Q24, Q28, R10, R11, and R12.

We use the described procedures for each micro category.

Table with the “C” label reflects the existing links with their intensities for the 1991–2005 period and the changes of these links during the period of 2006–2013.

Table with the “D” label contains the list of new links that appeared during the 2006–2013 period. We present the emergence and development of these new links in the table with the “E” label.

The table with “F” label provides examples of the first publications for the discovered new links.

The table with “G” label gives the list of potential new links at the end of 2013.

The table with “B” label shows the aggregative picture based on tables with the “C” and “D” labels for all micro categories for two periods, 1991–2005 and 1991–2013 respectfully, according to meso and macro categories. The table with the “A” label presents links according to macro categories.

Tables “C”

Tables with “C” labels are the Cores or the Centers of all other types of tables. We shall use micro category F00 for illustration. Here you can see fragments of table E10.C.

Table E10.C Links in 2005 according to Micro Categories

DE	N05	N13	D	T	DN05	DN13	Name of JEL Micro Category
A10	4	5	1	1.25	0.06	0.07	General Economics: General
A11	6	7	1	1.17	0.09	0.09	Role of Economics; Role of Economists
E10	2,359	2,701	342	1.14	36.66	35.17	General Aggregative Models: General
Z13	2	3	1	1.5	0.03	0.04	Economic Sociology; Economic Anthropology; Social and Economic Stratification
S	6,435	7,623	1,188	1.18	100	99.3	Sums and total rate of growth

In this table:

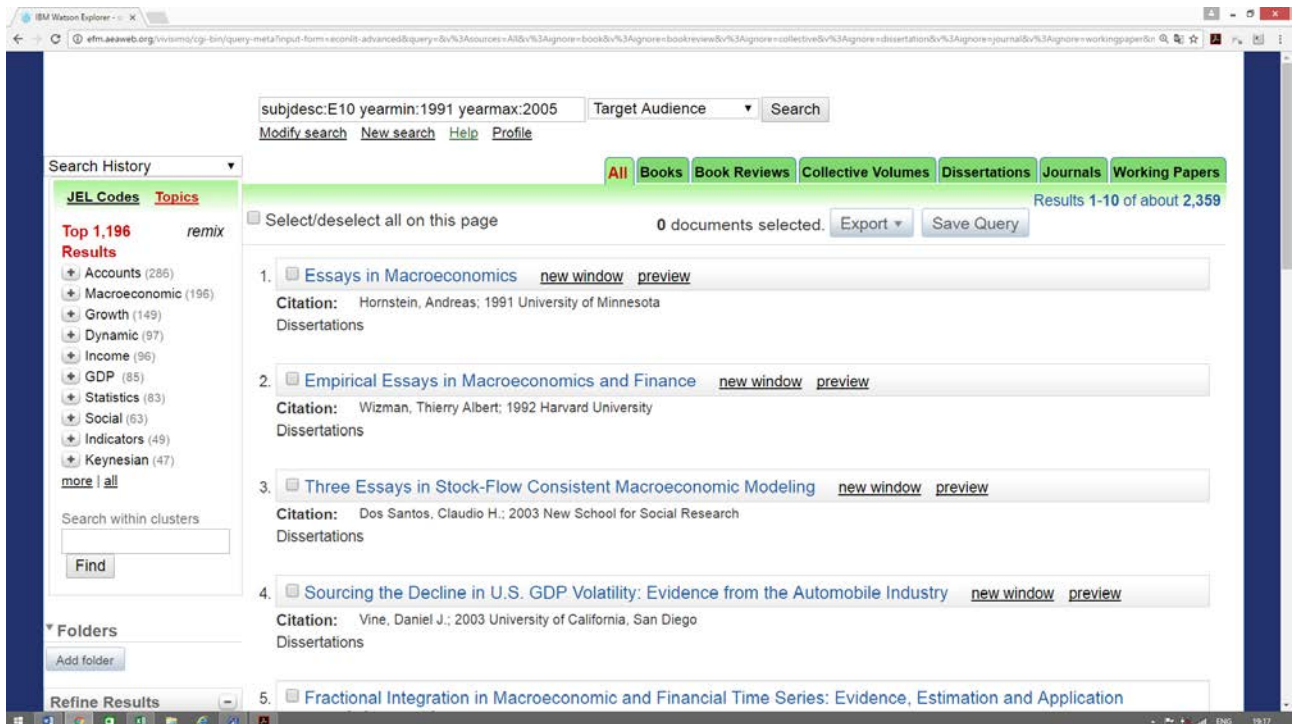

DE — the JEL codes of micro categories, which had the links with the code E10 during the period of 1991–2005.

N05 — the nonzero numbers of records in EconLit for the 1991–2005 for each code shown in the column DE. These numbers show the intensity of links between the basic code X under consideration (in this case X = E10) and the code in the column DE. The cell in row E10 will indicate the number of records that have a single code E10 in DE field. In this example, the number in this cell is “2,359”.

Validation of these results for the row E10 and columns N05 can be done by setting in the search window EconLit the expression:

subjdesc: E10 yearmin: 1991 yearmax: 2005

The following screenshot confirms that the number is “2,359”.

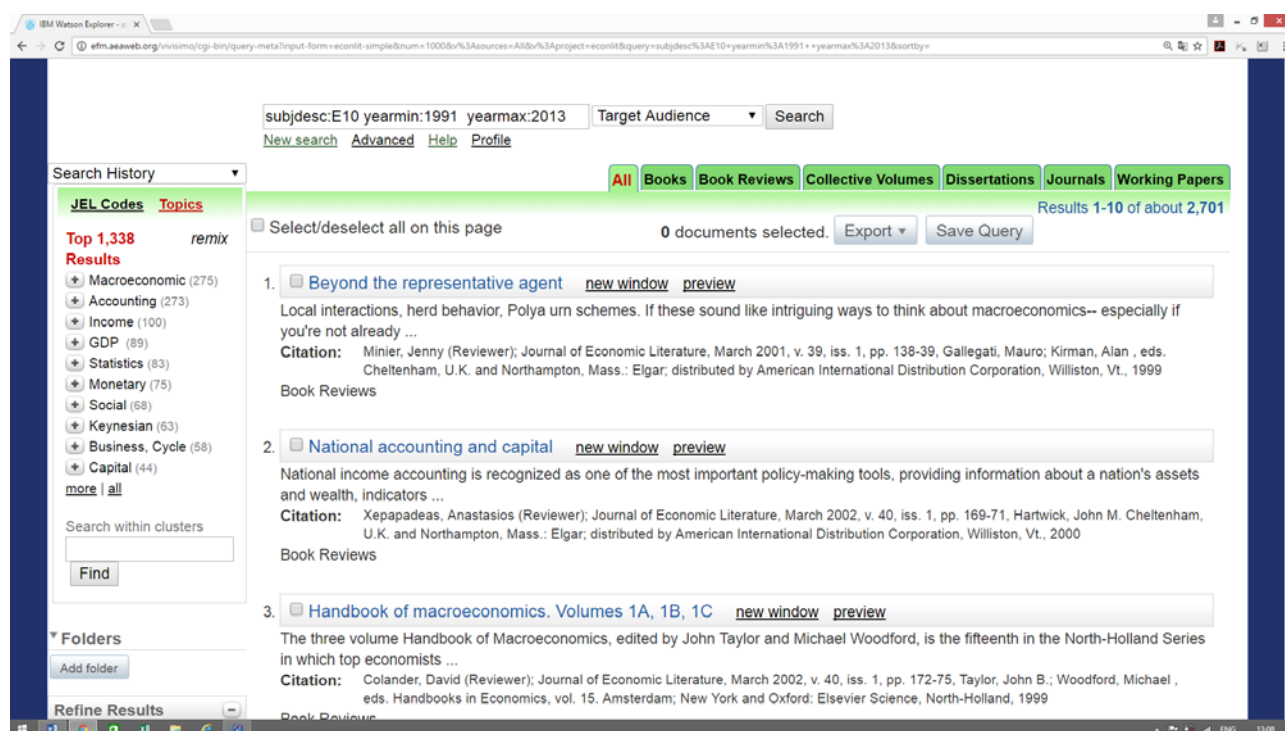

N13 — the number of records in EconLit for the period of 1991—2013.

Validation of results for the row E10 and column N13 can be done by setting in the search window EconLit the expression:

subjdesc: E10 yearmin: 1991 yearmax: 2013

The following resulting screenshot shows that the number is “2,701”.

$D = N13 - N05 = 2,701 - 2,359 = 342$ — the increase of publications in 2006–2013.

The last line in Table E10.C, in cell N05, shows the total number of EconLit records for E10 and the links (or intersections), which E10 had with other 821 JEL codes at the end of 2005. We can see the same result in the tables E10.A and E10.B.

As long as Table E10.C reflects only the links that existed in 2005, then the sum for N13 (7,623) does not include the publications for the new links in 2006–2013. Because of this fact it is necessary to consider together the sum of numbers in the column N13 in table E10.C with the sum in the column D in table E10.D (equal to 57) in order to receive the resulting sums for column N13 in the tables E10.A and E10.B (equal to 7,680): $7,623 + 57 = 7,680$.

According to the formula: $T = N13/N05$ the numbers in the column “T” show the growth rate in relation to the level of 2005. For the row with code E10 in the table E10.C: $T = 2,701/2,359 = 1.14$. For the resulting row S in the table E10.C: $T = 7,623/6,435 = 1.18$.

The number in column DN05 indicates the share (in percent), that the micro category with code in column DE and the intensity of link, shown in the column N05, has in the sum, which is allocated in the cell in row S and in the column N05 in the table with the label “C”.

If we take the row with the code E10 in the table E10.C then:

$$\frac{2,359}{6,435} \times 100 = 36.66$$

(Row E10 & column N05) (Row S & column N05) (Row E10 & column DN05)

The number in column DN13 indicate the share (in percent), which the micro category with the code in the column DE and intensity of link, shown in the column N13, has in the sum, stated in the row S and column N13 (but in the table with the “B” label in order to take into account together existing and new links).

Let us use example of the line with code E10:

$$\frac{2,701}{7,680} \times 100 = 35.17$$

(Row E10 & column N13) (Row S & column N13 in the table E10.B) (Row E10 & column DN13)

Because of new links in 2006–2013, the sum in the row S and in the column DN13 in the table E10.C is equal to 99.3 %. If we add 0.7 %, shown in the row S and in the column DN13 in the table E10.D, then we get the sum 100 %. It is necessary to pay attention to the difference between calculation of all shares and sums with MS Excel without any rounding, as well as the presentation of the same shares and sums in the Atlas tables with two digits after the decimal point.

We use the light yellow color in order to mark values in column T in the cases when the rate of growth for the code in row X exceeds the total rate of growth for all links shown in row S in the tables with labels “A” and “B”. We use light green color when the value in the column DN13 exceeds the value in column DN05.

The micro categories in the table with label “C” in the column DE are listed in alphabetical order of JEL subject codes. For the other variant of comparison, we have placed four ranked lists for numbers in columns N05, N13, D and T in decreasing order of the numerical values for the respective indicators.

Tables “D”

Table E10.D List of New Links in 2006–2013

DE	D	DN13	Name of JEL Micro Category
B24	1	0.01	History of Economic Thought since 1925: Socialist; Marxist; Sraffian
B53	1	0.01	Current Heterodox Approaches: Austrian
C01	3	0.04	Econometrics
C02	1	0.01	Mathematical Methods
C12	7	0.09	Hypothesis Testing: General
...
Z12	1	0.01	Cultural Economics: Religion
S	57	0.7	Sums

Tables with the label “D” contain the list of new links, which the basic micro category X (in this example, E10) has established with other micro categories during 2006–2013. New codes are listed in the column DE in alphabetical order with the values of corresponding publications at the intersections in the column D.

The number in column DN13 indicates the share (in percent) that the micro category with the code in the column DE and intensity of link shown in column D, has in the sum, which allocated in the row S and the column N13 in the table with label “B”. Following this table are the new link codes ranked in descending order of D. Validation of results for the rows C01, C12, and the column D can be done by setting in the search window EconLit the expression:

subjdesc: E10 subjdesc: C01 yearmax: 2013

subjdesc: E10 subjdesc: C12 yearmax: 2013

The following two screenshots confirm the validation of the results.

The screenshot displays the EconLit search results page. The search criteria are 'subjdesc: E10 subjdesc: C01 yearmax: 2013'. The results are sorted by relevance, showing three items:

Tables “B”

Table E10.B Links according to Meso Categories

DE	N05	N13	D	T	DN05	DN13	Names of JEL Meso- and Macro Categories
A0	0	0	0	N	0.00	0.00	General
A1	20	25	5	1.25	0.31	0.33	General Economics
A2	15	32	17	2.13	0.23	0.42	Economic Education and Teaching of Economics
A3	0	0	0	N	0.00	0.00	Collective Works
A	35	57	22	1.63	0.54	0.74	General Economics and Teaching

Table E10.C Links in 2005 according to Micro Categories

DE	N05	N13	D	T	DN05	DN13	Name of JEL Micro Category
A10	4	5	1	1.25	0.06	0.07	General Economics: General
A11	6	7	1	1.17	0.09	0.09	Role of Economics; Role of Economists
A12	5	8	3	1.6	0.08	0.1	Relation of Economics to Other Disciplines
A13	5	5	0	1	0.08	0.07	Relation of Economics to Social Values
A1	20	25	5				Sums

Cells from intersection of row A1 and columns NP05 and NP13 from the table E10.B contain the sums of the values of micro fields in the table E10.C included in meso field A1:

$$A1 (NP05) = A10(NP05) + A11(NP05) + A12(NP05) + A13(NP05) = 4 + 6 + 5 + 5 = 20.$$

$$A1 (NP13) = A10(NP13) + A11(NP13) + A12(NP13) + A13(NP13) = 5 + 7 + 8 + 5 = 25.$$

Indicators D, T, DN05, and DN13 in the tables “B” have the same meaning as in the tables “C” for micro categories. In the row “A” from the fragment of the table E10.B shown sum of values for meso categories A0, A1, A2, A3 and for columns NP05, NP13, and D. The value of T in all cases is derived with the formula NP13 / NP05 for the appropriate row. We use the letter “N” in order to mark the cases when the value of the denominator in a cell is zero (as for the lines A0 and A3).

Tables “A”

Table E10.A Links according to Macro Categories

DE	N05	N13	D	T	DN05	DN13	Name of JEL Macro Category

C	569	706	137	1.24	8.84	9.19	Mathematical and Quantitative Methods
D	275	336	61	1.22	4.27	4.38	Microeconomics
E	3,390	4,071	681	1.2	52.68	53.01	Macroeconomics and Monetary Economics
F	212	240	28	1.13	3.29	3.13	International Economics
G	76	121	45	1.59	1.18	1.58	Financial Economics
H	108	134	26	1.24	1.68	1.74	Public Economics
I	39	42	3	1.08	0.61	0.55	Health, Education, and Welfare
J	108	143	35	1.32	1.68	1.86	Labor and Demographic Economics
K	7	8	1	1.14	0.11	0.10	Law and Economics
L	121	140	19	1.16	1.88	1.82	Industrial Organization
M	22	24	2	1.09	0.34	0.31	Business Administration and Business Economics • Marketing • Accounting
N	167	182	15	1.09	2.60	2.37	Economic History
O	661	759	98	1.15	10.27	9.88	Economic Development, Technological Change, and Growth
P	186	193	7	1.04	2.89	2.51	Economic Systems
Q	263	274	11	1.04	4.09	3.57	Agricultural and Natural Resource Economics • Environmental and Ecological Economics
R	41	50	9	1.22	0.64	0.65	Urban, Rural, Regional, Real Estate, and Transportation Economics
Y	0	1	1	N	0.00	0.01	Miscellaneous Categories
Z	3	5	2	1.67	0.05	0.07	Other Special Topics
S	6,435	7,680	1,245	1.19	100	100	Sums and total rate of growth

Tables with the “A” label have a general purpose. From the view of 20 macro categories of JEL classification, the table shows existing connections a micro area X (in this example, E10) at the end of 2005 (NP05), and changes in these relationships due to the emergence of new links (growth D, NP13 = NP05 + D).

Tables “E”

Table E10.E Emergence and Evolution of New Links in 2006–2013

DE	2006	2007	2008	2009	2010	2011	2012	2013	S
C12	1	0	0	3	1	0	2	0	7
C78	1	0	0	0	0	0	0	0	1
L40	1	0	0	0	0	0	0	0	1
B53	0	1	0	0	0	0	0	0	1
F22	0	1	0	0	0	0	0	0	1
L22	0	1	0	0	0	0	0	0	1
L23	0	1	0	0	0	0	0	0	1
L25	0	1	0	0	0	0	0	0	1
L26	0	1	0	0	0	0	0	0	1
C02	0	0	1	0	0	0	0	0	1
P37	0	0	1	0	0	0	0	0	1
G01	0	0	0	2	2	4	5	1	14

Y10	0	0	0	0	0	0	0	1	1
NL(J)	3	6	2	2	10	3	2	3	31

Tables labeled “E” show the origin and evolution of new relationships between analyzed micro category X (in this example, E10) and other micro categories. The first crossing occurred in a year (the fragment presented it is 2006) provisionally called “seeds”, and table cells, which show the number of publications in these intersections, painted yellow. This “seed” can “sleep” until the end of the period under review (up to 2013). This is what happened with the “seeds” of lines C78, L40, F22, L22, L23, L25, L26, C02, and P27.

However, some “seeds” can provide “green shoots”. For the “seed” in the C12, there are three “shoot” in 2009, 2010, and 2012. For the “seed” in the G01, we see the “shoots” in each year beginning 2010.

The row NL (J) shows the numbers of new links in the years J = 2006, ..., 2013. The sums of new intersections for every row, and for the period 2006–2013 are in the column “S”.

Tables “F”

Table E10.F Examples of Publications according to New Links in 2006–2013

Year	DE	Title and Abstract
2006		
2006	E65	van der Ploeg, Frederick. 2006. <i>Challenges and Opportunities for Resource Rich Economies</i> . C.E.P.R. Discussion Papers, CEPR Discussion Papers: 5688. The political economy of resource rich countries is surveyed. The empirical evidence suggests that countries with a large share of primary exports in GNP have bad growth records and high inequality, especially if the quality of institutions and the rule of law are bad. The economic argument that a resource bonanza induces appreciation of the real exchange rate and a decline of non-resource export sectors may have some relevance. More important, a resource boom reinforces rent grabbing, especially if institutions are bad, and keeps in place bad policies. Optimal resource management may make use of the Hotelling rule and the Hartwick rule. However, a recent World Bank study suggests that resource rich economies squander their natural resource wealth and more often have negative genuine saving rates. Still, countries such as Botswana, Canada, Australia and Norway suggest it is possible to escape the resource curse. Some practical suggestions for a better management of natural resources are offered.

2007		
	...	
2007	L22 L23 L25 L26	Chatterjee, Satyajit, and Esteban Rossi-Hansberg. 2007. <i>Spin-offs and the Market for Ideas</i> . National Bureau of Economic Research, Inc. NBER Working Papers: 13198. We propose a theory of firm dynamics in which workers have ideas for new projects that can be sold in a market to existing firms or implemented in new firms: spin-offs. Workers have private information about the quality of their ideas. Because of an adverse selection problem, workers can sell their ideas to existing firms only at a price that is not contingent on their information. We show that the option to spin off in the future is valuable so only workers with very good ideas decide to spin off and set up a new firm. Since entrepreneurs of existing firms pay a price for the ideas sold in the market that implies zero expected profits for them, firms' project selection is independent of their size, which, under some assumptions, leads to scale-independent growth. The entry and growth process of firms in this economy leads to an invariant distribution that resembles the one in the US economy.

Tables labeled “F” contain information related to the first intersections (“seeds”) analyzed in basic micro field with the code X (in this example code is E10) according to the “E” type table. To design table “F” for better perception of information about publications on new crossings the following techniques have been used:

1. The data for each year is organized in such a pattern that the cell related to the year is highlighted in yellow. Then comes the white cell, and finally the blue strip across the entire width of the cell with the title and abstract.

2. Codes of new intersections are shown in the column DE in alphabetical order. If it turns out that the publication has two or more new code intersections, then all the codes are provided alphabetically in the same cell in the column DE and highlighted in yellow.

3. It may be a case that new codes of other publications are wedged in the gap between two new codes of the publication. In this case, the title and the abstract of the paper and the reverse link to the previously shown code such as THE SAME AS C20 appears, with an indication of the author, title and source of the publication with the earlier code are presented. At the same time, to save space, part of the source may be omitted.

4. Information about the publication in the column “Title and Abstract” are as following. At the beginning, we present bibliographic information, which is exported from EconLit data in the format AEA-Author-Date. This data will be copied to the clipboard and then, maintaining the original combination of standard and italic fonts, they are inserted in the appropriate cell of the “F” type table. If there is a publication of the abstract,

then by using the Complete Record tool it is copied from the EconLit records field AB, and then added to the cell form “F” after the publication of bibliographic information. Abstract is added only once, at the first mention of the publication for the new intersection.

5. In order to better distinguish the types of publications in “F” Tables, different types of font color, and color label have been used.

As seen from the fragment of the micro field E65 in 2006 bibliographic information about preprints (Working Paper) is highlighted in a light **green color**.

We use **turquoise color** to mark the information about articles in scientific journals:

Year	DE	Title and Abstract
2007	B53	Fillieule, Renaud. 2007. "A Formal Model in Hayekian Macroeconomics: The Proportional Goods-in-Process Structure of Production." <i>Quarterly Journal of Austrian Economics</i>, 10(3): 193-208. The core concept of Austrian macroeconomics is the structure of production, which makes it possible to analyze the intertemporal dimension of an economic system and to understand aspects of equilibrium, growth, and trade cycle that are neglected by usual-Keynesian and Neoclassical-macroeconomic models. This concept and a very convenient graphical illustration have been introduced by Hayek (1935, 1941), and then developed mainly by Rothbard (1962), Skousen (1990), Reisman (1996) and Garrison (2001). Reisman has offered one of the most detailed expositions and most thoroughgoing utilizations of the concept of structure of production so far (1996, chaps. 15-17). ...

Information about books is highlighted in yellow, and the cells with the year and the JEL code are highlighted light brown.

Year	DE	Title and Abstract
2008	C02	Flaschel, Peter, and Michael Landesmann, eds. 2008. <i>Mathematical Economics and the Dynamics of Capitalism: Goodwin's Legacy Continued</i>, Routledge Frontiers of Political Economy. London and New York: Taylor and Francis, Routledge. Fourteen papers explore the macroeconomic, structural, and microeconomic contributions of Richard Goodwin to the field of economics. Papers discuss coexistence of multiple business cycles in Goodwin's 1951 model; an encompassing theory of macroeconomic growth and fluctuation; Kaleckian investment and employment cycles in postwar industrialized economies; a Goodwin cycle with changing regimes of industrial relations; varieties of capitalism--the flexicurity model; Goodwin cycles and the U.S. economy, 1948-2004; the classical growth cycle after fifteen years of new observations; debt-equity cycles in the twentieth century--empirical evidence and a dynamic Keynesian model; monetary policy rules in small open economies--a Keynesian perspective; semistructural Keynes-Goodwin modeling--elaboration and calibration of a baseline theoretical framework; decomposition methods for analyzing intraregional and interregional income distribution; computational explorations of vertically coupled markets; microfounded animal spirits and Goodwinian income distribution dynamics; and Goodwin's structural economic dynamics in the context of globalization.

2009	G01	CV: Fontana, Giuseppe, and Mark Setterfield. 2009. "A Simple (and Teachable) Macroeconomic Model with Endogenous Money." In <i>Macroeconomic Theory and Macroeconomic Pedagogy</i> , ed. Giuseppe Fontana and Mark Setterfield, 144-68. New York: St. Martin's Press, Palgrave Macmillan.

Diss: shaded yellow mark PhD dissertations. Sand color paints the cells with the year and the JEL code:

Year	DE	Title and Abstract
2010	D53	Diss: Hoelle, Matthew. 2010. Bankruptcy and Transaction Costs in General Financial Models. PhD diss. University of Pennsylvania. General financial models have become workhorse models in the fields of macroeconomics and finance. These models have been developed and extensively studied by general equilibrium theorists. ...

6. When completing the “F” type table, it has often been the case that the combination of the content and the new codes have several preprints (Working Paper) of the author(s). The titles and abstracts of all papers were the same. The only difference was the source of publication. In this case the information presented only once in the “F” table. From the set of sources, the most significant (first NBER) was chosen.

Tables “G”

The table set for the micro category E10 is completed by table E10.G, which alphabetically lists the codes for micro categories that at the end of 2013 did not have the intersection with the code E10. This is a set of potential new links with the code E10. The table “E10: Balance of Links” gives the total number of potential new links at the end of 2013.

Table E10.G Potential New Links at the End of 2013

31	New links in 2006-2013
405	Potential links at the end of 2013
822	Total — Всего микрообластей

Notice regarding the validity and accuracy

At the end of each section, the date of the final verification is noted. There is a constant replenishment from EconLit, and there is a gap between the publication date and the download of this work in EconLit. There may be a gap of five years. Therefore, in this situation when the date of verification in EconLit, new publications will be issued in 2006–2013, or even earlier. This fact of the appearance of such a publication requires revisions to all tables of the section being analyzed, as well as the others containing the codes of new EconLit records.

The accuracy of the information provided in this volume and other volumes of the sub-series “Atlas of new research based on EconLit (2006–2013)”, will inevitably be limited by the existing restriction of the maximum size of 1000 units in terms of the cluster of records. Despite a number of techniques that are used by project participants to reduce the impact of this limitation, we are still not fully confident that all the journal articles with some micro category codes will be considered, in cases where there were more than 1,000 in particular years.

Sometimes there are cases when a work has the year of publication before 1991 and has the JEL code, which was introduced in 1991 or later. Such works are excluded from consideration and from the “seed” group. Usually, intersections that have arisen in 1991–2013 are fixed according to the year that was given in the PY field of the record, even in situations where the code shown in the field of DE had not yet been officially put into JEL releases. However, in the cases of significant discrepancies we give notes and additional information.

Mikhail V. Lychagin, Anton M. Lychagin, and Irina K. Muhina

Приложение В2. Путеводитель по таблицам Атласа¹

О предметной классификации JEL

Предметная классификация JEL (<https://www.aeaweb.org/econlit/jelCodes.php>) на конец 2013 года содержала 20 общих категорий. Каждая общая категория имела наименование и код, обозначенный одной большой латинской буквой. Категория “Е” называется “Макроэкономика и монетарная экономика” (Macroeconomics and Monetary Economics). Этой категории посвящен настоящий том, который имеет номер “5”.

Для нас будет удобно использовать термин “макро” вместо “общий” при рассмотрении 20 указанных общих категорий классификации JEL.

Каждая научная классификация является методом для разделения (размежевания, демаркации, деления) всей предметной области определенной науки (в нашем случае экономической) на совокупность частей (регионов, полей, и т.п.). С этой точки зрения JEL-категорию “Е” можно рассматривать как макрообласть экономической науки или экономических исследований.

Мы используем коды и наименования макрокатегорий JEL в таблицах с пометой («ярлыком», «этикеткой») “А”.

Классификация JEL разбивает макрокатегорию Е на семь мезокатегорий с соответствующими наименованиями и с кодами (дескрипторами — DE), которые содержат букву макрокатегории и одну арабскую цифру (например, E1). На конец 2013 года насчитывалось 127 мезокатегорий.

Мы используем наименования и коды мезокатегорий JEL в таблицах с пометой “В”.

Классификация JEL делит большинство мезокатегорий на несколько (от одной до 10) микрокатегорий с соответствующими наименованиями и кодами, которые содержат код мезокатегории и одну арабскую цифру для обозначения микрокатегории. Коды и наименования 7 мезо- и 45 микрокатегорий для макрокатегории Е выглядят следующим образом:

Код и наименование категории JEL
E0 Общее для макрокатегории Е
E00 Общее
E01 Измерение и данные национального дохода и счетов производства и богатства • Счета окружающей среды
E02 Институты и макроэкономика
E03 Поведенческая макроэкономика
E1 Общие агрегированные модели
E10 Общее
E11 Марксистские • Сраффианские • Институциональные • Эволюционные (модели)
E12 Кейнс • Кейнсианство • Посткейнсианство
E13 Неоклассические модели
E16 Матрица социального учета
E17 Прогнозирование и имитация: модели и их применение
E19 Прочее
E2 Потребление, сбережения, производство, инвестиции, рынки труда и неформальная экономика
E20 Общее
E21 Потребление • Сбережения • Богатство
E22 Капитал • Инвестиции • Мощности
E23 Макроэкономика: производство
E24 Занятость • Безработица • Заработная плата • Распределение дохода между поколениями • Агрегированный человеческий капитал
E25 Агрегированные факторы распределения доходов
E26 Неформальная экономика • Нелегальная экономика

E65 Исследования специфических эпизодов политики
E66 Общая перспектива и условия
E69 Прочее

Существующая предметная классификация JEL появилась в 1991 году. В начале в ней было 627 микрокатегорий. К 2005 году число микрокатегорий выросло до 757. На конец 2013 года насчитывалось 822 микрокатегории.

Каждая публикация, включенная в электронную библиографию EconLit, имеет совокупность специальных полей для описания (отражения) наиболее важных характеристик работы. Поле DE (“Description” — описание) содержит набор предметных микрокатегорий (областей), охватываемых данной публикацией.

Существует два типа заполнения поля DE:

1. Наличие единственного предметного микрокода классификации JEL.
2. Наличие кодов нескольких предметных микрокатегорий.

Проиллюстрируем записи EconLit с кодом E10.

Приведем пример с единственным кодом E10:

TI: Essays in Macroeconomics

AU: Hornstein, Andreas

SO: Ph.D. University of Minnesota 1991

PY: 1991

DE General Aggregative Models: General E10

В конце 1991 года в EconLit имелось 130 записей с кодом E10. Часть записей содержала несколько кодов в поле DE (см. примеры).

Два кода

TI: Dynamic (S,s) Economies
 AU: Caballero, Ricardo J.; Engel, Eduardo M. R. A.
 SO: National Bureau of Economic Research, Inc, NBER Working Papers: 3734, 1991, pp.
 AV: <http://www.nber.org/papers/w3734.pdf>
 DT: Working Paper
 PY: 1991
DE: General Aggregative Models: General E10; Consumption, Saving, Production, Investment, Labor Markets, and Informal Economy: General (includes Measurement and Data) E20

Три кода

TI: The Scientific Illusion in Empirical Macroeconomics: Comment
 AU: Gottfries, Nils
 AF: Institute for International Econ Studies, Stockholm
 SO: New approaches to empirical macroeconomics, 1991, pp. 21-26
 PB: Oxford and Cambridge: Blackwell
 DT: Collective Volume Article
 PY: 1991
 ED: Hylleberg, Svend; Paldam, Martin, eds.
DE: General Aggregative Models: General E10; Economic Methodology B41; Econometric Modeling: General C50

Четыре кода

TI: Treatment of Deep-Discounted and Index-Linked Bonds in the National Accounts
 AU: Newson, Brian; Brodersen, Soren
 AF: EUROSTAT; Danmarks Statistik
 SO: The IMF's statistical systems in context of revision of the United Nations' A System of National Accounts, 1991, pp. 483-504
 PB: Washington, D.C.: International Monetary Fund
 IB: 1-55775-159-5
 DT: Collective Volume Article
 PY: 1991
 ED: Galbis, Vicente, ed.
DE: General Aggregative Models: General E10; Methodology for Collecting, Estimating, and Organizing Macroeconomic Data; Data Access C82; General Financial Markets: General (includes Measurement and Data) G10; Accounting and Auditing: General M40

Теоретически микрокатегория E10 могла образовать сочетания (связи) с 626 другими микрокатегориями, которые входили в классификацию JEL в 1991 году. Но фактически имелись связи со следующими 5 микрокатегориями: C82(23), C50(14), B41(8), E17(8), C32(7), E32(7), Q20(7), Q30(6), C11(3), D31(3), E20(3), E24(3), M40(3), A20(2), B20(2), C22(2), C52(2), C80(2), E12(2), E30(2), E37(2), F10(2), F31(2), H60(2), L80(2), C10(1), D13(1), D40(1), D50(1), D90(1), E13(1), E22(1), E23(1), E40(1), E66(1), F14(1), F20(1), F32(1), F33(1), F34(1), G10(1), G12(1), G15(1), G30(1), H00(1), H10(1), H30(1), H61(1), H63(1), O10(1), O41(1), O47(1), O49(1), O50(1), O57(1), P24(1), P33(1), P52(1), R20(1).

Числа в круглых скобках указывают на число записей в EconLit, которые в поле DE имели код E10 и соответствующий второй код. Представляется возможным использовать эти числа в качестве **меры (оценки) интенсивности (силы) связи**. Мы видим, что наиболее сильной была связь между E10 и C82 (23 работы). На втором месте находится связь E10 с кодом C50 (14 публикаций).

Будем называть указанные 59 связей, которые были зафиксированы на конец 1991 года, *существующими связями*. К существующим связям можно отнести связь кода E10 с самим собой. Итого на

конец 1991 года использовано 60 кодов. Оставшийся резерв: 566 кодов (626 – 60). Входящие в этот резерв коды могут образовать потенциально новые связи с кодом E10.

Поиск в EconLit показывает наличие 144 новых публикаций с кодом E10 в 1992 году. Первая часть этих записей имеет в поле DE только один код E10. Вторая часть работ будет иметь сочетания нескольких кодов, которые наблюдались в 1991 году. Третья часть включает 73 **новые связи** со следующими кодами, которые в 1991 году входили в список “Потенциальных новых связей”: B12, B14, B22, B30, B40, C43, C51, C53, C62, C83, C92, D00, D10, D20, D51, D57, D60, D62, D63, D70, D80, D84, D91, E19, E31, E41, E47, E51, E52, E61, E62, F01, F36, H26, H56, I21, I31, I32, J10, J16, J22, J23, J24, J50, J60, L11, L13, L30, L60, L72, L90, M41, N11, N12, N14, N15, N17, O11, O14, O15, O19, O23, O32, O40, P10, P21, Q10, Q23, Q24, Q28, R10, R11 и R12.

Описанные процедуры мы используем для каждой микрокатегории.

Таблицы с пометой “С” отражают существующие связи и их интенсивности для периода 1991–2005 гг. и изменения этих связей в течение 2006–2013 годов.

Таблицы с пометой “D” содержат перечни новых связей, которые появились в период 2006–2013 годов. Появление и развитие этих новых связей по годам можно проследить при помощи таблиц с пометами “E”. Таблицы с пометой “F” содержат примеры первых публикаций для выявленных новых связей. Таблицы с пометой “G” дают списки потенциально новых связей на конец 2013 года.

Таблицы с пометой “B” показывают агрегированную картину, которая базируется на таблицах с пометами “С” и “D” и учитывает все микрокатегории для периодов 1991–2005 и 1991–2013 годов в разрезе мезо- и макрокатегорий.

Таблицы с пометой “A” представляют связи согласно макрокатегориям.

Таблицы “С”

Таблицы с пометами “С” являются центральными (отправными) для таблиц других видов. Будем использовать для иллюстрации микрокатегорию E10.

Далее приведены фрагменты таблицы E10.C. В этой таблице и других таблицах использован англоязычный вариант представления чисел: десятичная часть числа отделяется точкой, а затем каждые три разряда в целой части разделяются запятыми.

DE — коды микрокатегорий JEL, которые имели связи с кодом E10 в течение 1991–2005 гг.

N05 — ненулевое число записей в EconLit за 1991–2005 гг. для каждого кода, приведенного в столбце DE. Если строка в колонке DE имеет тот же код X, который совпадает с кодом рассматриваемой базовой микрокатегории и который стоит в индексе таблицы (в нашем случае X = E10), тогда число в ячейке таблицы будет указывать на число записей в EconLit, которые в поле DE содержали только код X. В нашем примере это число “2,359”.

Table E10.C Links in 2005 according to Micro Categories — Связи в 2005 г. согласно микрокатегориям

DE	N05	N13	D	T	DN05	DN13	Name of JEL Micro Category
A10	4	5	1	1.25	0.06	0.07	General Economics: General
A11	6	7	1	1.17	0.09	0.09	Role of Economics; Role of Economists
E10	2,359	2,701	342	1.14	36.66	35.17	General Aggregative Models: General
Z13	2	3	1	1.5	0.03	0.04	Economic Sociology; Economic Anthropology; Social and Economic Stratification
S	6,435	7,623	1,188	1.18	100	99.3	Sums and total rate of growth

Правильность результата для строки E10 и столбца N05 может быть проверена путем помещения в поисковое окно EconLit следующего выражения:

subjdesc: E10 yearmin: 1991 yearmax: 2005

Идущий далее принт-скрин показывает, что искомое число именно “2,359”.

Search results for **subjdesc:E10 yearmin:1991 yearmax:2005**. Results 1-10 of about 2,359.

Book Reviews

$D = N13 - N05 = 2,701 - 2,359 = 342$ — прирост публикаций в 2006–2013 гг.

Число, которое стоит в последней строке таблицы E10.C в ячейке столбца N05, показывает общее число записей в EconLit для кода E10 и связей (пересечений), которые область E10 имела с остальными (их 821) кодами JEL в конце 2005 года. Число в итоговой строке столбца N13 показывает аналогичную сумму для 1991–2013 гг. Поскольку таблица E10.C отражает только связи, которые существовали в

2005 году, то итоговая сумма для столбца N13 (7,623) не включает публикации, соответствующие новым связям, появившимся в 2006–2013 гг.

По этой причине необходимо анализировать сумму для N13 в таблице E10.C совместно с итоговой суммой публикаций в таблице E10.D (она равна 57) для того, чтобы получить результирующие суммы для N13 в таблицах E10.A и E10.B (они равны 7,680): $7,623 + 57 = 7,680$.

Числа в колонке “Т” показывают темп роста по к уровню 2005 года по формуле: $T = N13/N05$.

Для строки с кодом E10 имеем: $T = 2,701/2,359 = 1.14$.

Для итоговой строки S: $T = 7,623/6,435 = 1.18$.

В столбце DN05 приведены доли (в процентах), которые микрокатегории с кодом, приведенном в колонке DE и интенсивностью связей, приведенных в столбце N05, имеют в сумме, приведенной в строке S и в столбце N05 таблицы с пометой “С”.

Для строки с кодом E10:

$$2,359 \quad / \quad 6,435 \times 100 \quad = \quad 36.66.$$

(Строка E10 & столбец N05) (Строка S & столбец N05 в таблице E10.B) (Строка E10 & столбец DN05)

В столбце DN13 приведены доли (в процентах), которые микрокатегории с кодом, приведенном в колонке DE, и интенсивностью связей, приведенных в столбце “N05”, имеют в сумме, показанной в строке S (но в таблице с пометой “B” для того, чтобы учесть как существующие, так и новые связи). Рассмотрим снова строку с кодом E10:

$$2,701 \quad / \quad 7,680 \times 100 \quad = \quad 35.17.$$

(Строка E10 & столбец N13) (Строка S & столбец N13 в таблице E10.B) (Строка E10 & столбец DN13)

Вследствие наличия новых связей в 2006–2013 гг. сумма в строке S и столбце DN13 в таблице E10.C равна 99.3 %. Если мы добавим 0.7 %, показанные в строке S и столбце DN13 в таблице E10.D, то получим сумму 100 %.

Необходимо обратить внимание на различие, возникающее между подсчетом всех долей и сумм в пакете MS Excel, которое проводится без округления, и представление тех же долей и сумм в таблицах Атласа, когда оставлено только две цифры после десятичной точки. В строке S и столбцах DN05 и DN13 показаны точные значения, которые могут отличаться от значений, полученных при суммировании округленных значений долей в указанных столбцах.

Мы используем светло-желтый цвет для выделения значений в столбце T в случаях, когда темп роста в строке с кодом X превышает средний темп роста для всех связей, показанный в строке S в таблицах с пометами “A” и “B”. Светло-зеленый цвет используется для выделения случаев, когда для кода X значение в столбце DN13 больше соответствующего значения, показанного в столбце DN05. В таблицах с пометой “С” микрокатегории в столбце DE перечислены в алфавитном порядке следования предметных кодов JEL. Для новых связей в таблице типа “D” дан ранжированный список для показателя D в порядке убывания числовых значений.

Таблицы “D”

Table E10.D List of New Links in 2006–2013 — Перечень новых связей в 2006–2013 гг.

DE	D	DN13	Name of JEL Micro Category
B24	1	0.01	History of Economic Thought since 1925: Socialist; Marxist; Sraffian
B53	1	0.01	Current Heterodox Approaches: Austrian
C01	3	0.04	Econometrics
C02	1	0.01	Mathematical Methods
C12	7	0.09	Hypothesis Testing: General
...			
Z12	1	0.01	Cultural Economics: Religion
S	57	0.7	Sums

Таблицы с пометой “D” содержат список новых связей, которые базовая микрокатегория X (в нашем примере это E10) образовала с другими микрообластями в 2006–2013 годах.

Новые коды приведены в столбце D в алфавитном порядке со значениями интенсивности соответствующих связей в столбце D.

В добавление к этому перечню после таблицы приведен список кодов микрообластей в порядке уменьшения значений интенсивности связей.

Числа в столбце DN13 — это процентные доли, которые микрообласти с кодами, приведенными в столбце DE, имеют в сумме, указанной в строке S и столбце N13 таблицы с пометой “B”.

Правильность результатов для строк с кодами C01, C12 и столбца D может быть проверена, если в поисковое окно EconLit подставить выражения:

Таблицы “В”

Table E10.B Links according to Meso Categories — Связи согласно мезокатегориям

DE	N05	N13	D	T	DN05	DN13	Names of JEL Meso- and Macro Categories
A0	0	0	0	N	0.00	0.00	General
A1	20	25	5	1.25	0.31	0.33	General Economics
A2	15	32	17	2.13	0.23	0.42	Economic Education and Teaching of Economics
A3	0	0	0	N	0.00	0.00	Collective Works
A	35	57	22	1.63	0.54	0.74	General Economics and Teaching

Table E10.C Links in 2005 according to Micro Categories — Связи согласно микрокатегориям

DE	N05	N13	D	T	DN05	DN13	Name of JEL Micro Category
A10	4	5	1	1.25	0.06	0.07	General Economics: General
A11	6	7	1	1.17	0.09	0.09	Role of Economics; Role of Economists
A12	5	8	3	1.6	0.08	0.1	Relation of Economics to Other Disciplines
A13	5	5	0	1	0.08	0.07	Relation of Economics to Social Values
A1	20	25	5				Sums

Ячейки строки A1 и столбцов NP05 и NP13 таблицы E10.B содержат суммы значений микрообластей в таблице E10.C, входящих в мезообласть A1:

$$A1(NP05) = A10(NP05) + A11(NP05) + A12(NP05) + A13(NP05) = 4 + 6 + 5 + 5 = 20.$$

$$A1(NP13) = A10(NP13) + A11(NP13) + A12(NP13) + A13(NP13) = 5 + 7 + 8 + 5 = 25.$$

Показатели D, T, DN05 и DN13 в таблицах с пометами “В” имеют тот же смысл, что и соответствующие показатели в таблицах с пометами “С” для микрокатегорий. В строке “А” в приведенном фрагменте таблицы E10.B приведены суммы значений по мезокатегориям A0, A1, A2, A3 для столбцов NP05, NP13 и D. Значение T всех случаях определяется по формуле NP13/NP05 для соответствующей строки. В тех случаях, когда значение знаменателя дроби равно нулю (как для строк A0 и A3), в ячейку ставится буква “N”.

Таблицы “А”

Table E10.A Links according to Macro Categories — Связи согласно макрокатегориям

Таблицы с пометой “А” имеют обобщающий характер. В этой таблице в разрезе 20 макрокатегорий классификации JEL показаны как существующие связи микрообласти X (в нашем примере это E10) на конец 2005 года (NP05), так и изменение этих связей за счет появления новых (прирост D, NP13 = NP05 + D).

Показатели D, T, DN05 и DN13 в таблицах с пометами “В” имеют тот же смысл, что и соответствующие показатели в таблицах с пометами “С” для микрокатегорий.

Таблицы “Е”

Таблицы с пометой “Е” показывают возникновение и эволюцию новых связей анализируемой микрообласти X (в нашем примере это E10) с другими микрообластями. Первые возникшие пересечения в некотором году (в приведенном фрагменте представлен фрагмент для 2006 года) условно называются “семенами”. Ячейки таблицы, в которых показано число публикаций на данных пересечениях, окрашены в желтый цвет. Это “семя” может “спать” до конца рассматриваемого периода (до 2013 года). Так произошло с “семенами” на строках с кодами C78, L40, F22, L22, L23, L25, L26, C02 и P27.

Но “семена” могут дать “зеленые ростки” или “зеленые побеги”. Для “семени” в строке C12 мы видим три “побега” в 2009, 2010 и 2012 годах. “Семя” в строке G01 стало давать “побеги” с 2010 года.

Число новых пересечений для каждого года указано в строке NL(J), J = 2006, ..., 2013.

Table E10.E Emergence and Evolution of New Links in 2006–2013 — Появление и развитие новых связей в 2006–2013 гг.

Таблицы “F”

Table E10.F Examples of Publications according to New Links in 2006–2013 —

Примеры публикаций согласно новым связям в 2006–2013 гг.

Year	DE	Title and Abstract
2006		
2006	E65	van der Ploeg, Frederick. 2006. <i>Challenges and Opportunities for Resource Rich Economies</i> . C.E.P.R. Discussion Papers, CEPR Discussion Papers: 5688. The political economy of resource rich countries is surveyed. The empirical evidence suggests that countries with a large share of primary exports in GNP have bad growth records and high inequality, especially if the quality of institutions and the rule of law are bad. The economic argument that a resource bonanza induces appreciation of the real exchange rate and a decline of non-resource export sectors may have some relevance. More important, a resource boom reinforces rent grabbing, especially if institutions are bad, and keeps in place bad policies. Optimal resource management may make use of the Hotelling rule and the Hartwick rule. However, a recent World Bank study suggests that resource rich economies squander their natural resource wealth and more often have negative genuine saving rates. Still, countries such as Botswana, Canada, Australia and Norway suggest it is possible to escape the resource curse. Some practical suggestions for a better management of natural resources are offered.
	...	
2007		
	...	
2007	L22 L23 L25 L26	Chatterjee, Satyajit, and Esteban Rossi-Hansberg. 2007. <i>Spin-offs and the Market for Ideas</i> . National Bureau of Economic Research, Inc. NBER Working Papers: 13198. We propose a theory of firm dynamics in which workers have ideas for new projects that can be sold in a market to existing firms or implemented in new firms: spin-offs. Workers have private information about the quality of their ideas. Because of an adverse selection problem, workers can sell their ideas to existing firms only at a price that is not contingent on their information. We show that the option to spin off in the future is valuable so only workers with very good ideas decide to spin off and set up a new firm. Since entrepreneurs of existing firms pay a price for the ideas sold in the market that implies zero expected profits for them, firms' project selection is independent of their size, which, under some assumptions, leads to scale-independent growth. The entry and growth process of firms in this economy leads to an invariant distribution that resembles the one in the US economy.

Таблицы с пометой “F” содержат информацию о первых пересечениях (“семенах”) анализируемой (базовой) микрообласти с кодом X (в нашем примере это E10) согласно информации таблиц с пометами “E”.

Для более удобного восприятия информации о публикациях на новых пересечениях при конструировании таблиц с пометой “F” использованы следующие приемы:

1. Данные для каждого года выделены закраской желтым цветом ячейки с номером года. Затем идет белая ячейка в графе DE, а после нее голубая полоса во всю ширину ячейки с заголовком Title and Abstract (название и реферат).

2. Коды новых пересечений приводятся в графе DE в алфавитном порядке. Если оказывается, что публикация имеет два или больше кодов новых пересечений, то все коды даются в столбце DE в одной ячейке алфавитном порядке и закрашиваются желтым.

3. Может оказаться, что в промежуток между двумя новыми кодами описываемой публикации вклиниваются новые коды других публикаций. В этом случае дается обратная ссылка на ранее приведенный код в виде THE SAME AS C20 с указанием автора, названия работы и источника публикации. Для журнальных статей приводятся все библиографические сведения, для других видов публикаций (в частности, статей в сборниках научных трудов) часть сведений об источнике может быть опущена.

Из приведенных в п. 1—3 правил могут быть исключения в двух случаях. Во-первых, работа может иметь много последовательных кодов пересечений, и, соответственно, много обратных ссылок типа THE SAME AS В этом случае для получения более подробных сведений о работе читателю придется неоднократно осуществлять обратные пролистывания. Во-вторых, между первым и последующими пересечениями кодов в таблицах типа F может оказаться более одной страницы текста, что опять потребует дополнительной работы по пролистыванию. При этом публикация может не иметь реферата (обычно это наблюдается для статей из сборников трудов). В этих случаях мы сознательно пошли на некоторое дублирование текста для того, чтобы пользователь Атласа не запутался во взаимосвязях прямых и обратных ссылок и не утомился от пролистывания страниц.

4. Сведения о публикации в столбце “Title and Abstract” приводятся следующим образом. Сначала из EconLit экспортируются данные в формате AEA-Author-Date Format.

Эти данные копируются в буфер обмена и потом вставляются в нужную ячейку таблицы типа “F” с сохранением исходного сочетания прямого шрифта и курсива. Если присутствует реферат пуб-

ликации, то при помощи функции экспорта данных Complete Record он копируется из области АВ записи EconLit в буфер обмена и потом добавляется в ячейку формы “F” после библиографических сведений о публикации. Реферат добавляется только один раз при первом упоминании публикации.

5. Для лучшего различения типов публикаций в таблицах с пометой “F” кроме видов шрифта используются различные цвета и цветовые метки. Как видно из приведенного фрагмента для микрообласти D51 и 2006 года, библиографические сведения о препринтах (**Working Papers** или **Discussion Papers**) окрашиваются в светло-зеленый цвет.

Сведения о статьях в научных журналах закрашены **бирюзовым**:

Year	DE	Title and Abstract
2007	B53	Fillieule, Renaud. 2007. "A Formal Model in Hayekian Macroeconomics: The Proportional Goods-in-Process Structure of Production." <i>Quarterly Journal of Austrian Economics</i> , 10(3): 193-208. The core concept of Austrian macroeconomics is the structure of production, which makes it possible to analyze the intertemporal dimension of an economic system and to understand aspects of equilibrium, growth, and trade cycle that are neglected by usual-Keynesian and Neoclassical-macroeconomic models. This concept and a very convenient graphical illustration have been introduced by Hayek (1935, 1941), and then developed mainly by Rothbard (1962), Skousen (1990), Reisman (1996) and Garrison (2001). Reisman has offered one of the most detailed expositions and most thoroughgoing utilizations of the concept of structure of production so far (1996, chaps. 15-17). ...

Сведения о книгах закрашены желтым, а ячейки с годом и кодом имеют светло-коричневый цвет.

Year	DE	Title and Abstract
2008	C02	Flaschel, Peter, and Michael Landesmann, eds. 2008. <i>Mathematical Economics and the Dynamics of Capitalism: Goodwin's Legacy Continued</i> , Routledge Frontiers of Political Economy. London and New York: Taylor and Francis, Routledge. Fourteen papers explore the macroeconomic, structural, and microeconomic contributions of Richard Goodwin to the field of economics. Papers discuss coexistence of multiple business cycles in Goodwin's 1951 model; an encompassing theory of macroeconomic growth and fluctuation; Kaleckian investment and employment cycles in postwar industrialized economies; a Goodwin cycle with changing regimes of industrial relations; varieties of capitalism--the flexicurity model; Goodwin cycles and the U.S. economy, 1948-2004; the classical growth cycle after fifteen years of new observations; debt-equity cycles in the twentieth century--empirical evidence and a dynamic Keynesian model; monetary policy rules in small open economies--a Keynesian perspective; semistructural Keynes-Goodwin modeling--elaboration and calibration of a baseline theoretical framework; decomposition methods for analyzing intraregional and interregional income distribution; computational explorations of vertically coupled markets; microfounded animal spirits and Goodwinian income distribution dynamics; and Goodwin's structural economic dynamics in the context of globalization.

Статьи в сборниках научных трудов имеют помету **CV**; закрашенную **желтым**:

Year	DE	Title and Abstract
2006	G01	CV ; Fontana, Giuseppe, and Mark Setterfield. 2009. "A Simple (and Teachable) Macroeconomic Model with Endogenous Money." In <i>Macroeconomic Theory and Macroeconomic Pedagogy</i> , ed. Giuseppe Fontana and Mark Setterfield, 144-68. New York: St. Martin's Press, Palgrave Macmillan.

Диссертации имеют помету **Diss**; закрашенную **желтым**. Ячейки с годом и кодом у данного вида работ имеют песочный цвет:

Year	DE	Title and Abstract
2010	D53	Diss ; Hoelle, Matthew. 2010. <i>Bankruptcy and Transaction Costs in General Financial Models</i> . PhD diss. University of Pennsylvania. General financial models have become workhorse models in the fields of macroeconomics and finance. These models have been developed and extensively studied by general equilibrium theorists. ...

6. При заполнении таблиц с пометами “F” часто оказывалось, что сочетание анализируемого и нового кодов имеют несколько препринтов (Working Paper) одного авторов (авторов) с одинаковыми названиями и рефератами, но разными источниками. В этом случае в таблице типа “F” сведения о работе приводятся только один раз. Из набора источников выбирался наиболее значимый (в первую очередь NBER).

Таблицы “G”

Набор таблиц для микрообласти E10 завершает таблица типа “G”, в которой в алфавитном порядке кодов перечислены микрокатегории, которые на конец 2013 года не имели пересечений с микрообластью E10. Это набор потенциально новых связей с E10.

Их число на конец указано в таблице “E10: Balance of Links” — “Баланс связей”. Желтым цветом помечены микрокатегории, с которыми возникли пересечения в 2014–2015 гг.

Table E10.G Potential New Links at the End of 2013 — Потенциальные новые связи на конец 2013 г.

DE	Name of JEL Micro Category
A00	General Economics and Teaching

	...
C54	Quantitative Policy Modeling
C55	Modeling with Large Data Sets
	...

E10: Balance of Links — Баланс связей

386	Links in 2005 — Число связей между микрообластями на конец 2005 г.
31	New links in 2006-2013 — Новые связи, возникшие в период 2006—2013 гг
405	Potential links at the end of 2013 — Потенциально новые связи на конец 2013 г.
822	Total — Всего микрообластей

Уведомление относительно достоверности и точности

В конце каждого раздела указана дата окончательной верификации (the date of final verification). Происходит постоянное пополнение EconLit и имеется разрыв между датой публикации и работы и отражением этой работы в EconLit (иногда этот разрыв может составить пять лет). Поэтому вполне ожидаема ситуация, когда после даты верификации в EconLit будет зафиксирована публикация, изданная в период 2006–2013 гг. (или даже ранее). И появление такой публикации потребует внесения уточнений во все таблицы как анализируемого раздела, так и других, содержащих коды вновь появившейся записи EconLit.

На точность информации неизбежно будет оказывать существующее ограничение на максимальный размер кластера извлекаемых записей в 1000 единиц. Несмотря на ряд приемов, которые использовали участники Проекта для уменьшения влияния этого ограничения, у нас все равно нет полной уверенности в том, что действительно учтены все журнальные статьи с кодами микрообластей, в которых в некоторые годы было более 1000 таких статей.

Иногда встречались случаи, когда работа, изданная до 1991 года, имела код классификации, введенной в 1991 году. Такие работы исключались из рассмотрения и не включались в группу “семян”. Пересечения, возникшие в 1991–2013 гг., в большинстве случаев фиксировались по году, приведенному в поле PY записи, даже в ситуациях, когда код, указанный в поле DE, не был еще официально введен в выпусках JEL. Но в случае значимых расхождений давались пометки и дополнительная информация.

М. В. Лычагин, А. М. Лычагин, И. К. Мухина

D00 General	D00 Общее
D01 Microeconomic Behavior: Underlying Principles	D01 Микроэкономическое поведение: фундаментальные принципы
D02 Institutions: Design, Formation, and Operations	D02 Институты: проектирование, формирование и операции
D03 Behavioral Microeconomics • Underlying Principles	D03 Поведенческая экономика: фундаментальные принципы
D04 Microeconomic Policy: Formulation • Implementation • Evaluation	D04 Микроэкономическая политика: Формулирование • Осуществление • Оценка
D1 Household Behavior and Family Economics	D1 Поведение домашних хозяйств и семейная экономика
D10 General	D10 Общее
D11 Consumer Economics: Theory	D11 Экономика потребителя: теория
D12 Consumer Economics: Empirical Analysis	D12 Экономика потребителя: эмпирический анализ
D13 Household Production and Intrahousehold Allocation	D13 Производство в домашнем хозяйстве и внутрихозяйственное размещение (ресурсов)
D14 Household Saving • Personal Finance	D14 Сбережения домашнего хозяйства • Личные финансы
D18 Consumer Protection	D18 Защита потребителя
D19 Other	D19 Прочее
D2 Production and Organizations	D2 Производство и организации
D20 General	D20 Общее
D21 Firm Behavior: Theory	D21 Поведение фирмы: теория
D22 Firm Behavior: Empirical Analysis	D22 Поведение фирмы: эмпирический анализ
D23 Organizational Behavior • Transaction Costs • Property Rights	D23 Организационное поведение • Транзакционные издержки • Права собственности
D24 Production • Cost • Capital • Capital, Total Factor, and Multifactor Productivity • Capacity	D24 Производство • Издержки • Капитал, общая и мультифакторная производительность • Мощности
D29 Other	D29 Прочее
D3 Distribution	D3 Распределение
D30 General	D30 Общее
D31 Personal Income, Wealth, and Their Distributions	D31 Личный доход, богатство и их распределение
D33 Factor Income Distribution	D33 Факторы распределения доходов
D39 Other	D39 Прочее
D4 Market Structure and Pricing	D4 Рыночная структура и ценообразование
D40 General	D40 Общее
D41 Perfect Competition	D41 Совершенная конкуренция
D42 Monopoly	D42 Монополия
D43 Oligopoly and Other Forms of Market Imperfection	D43 Олигополия и другие формы несовершенства рынка
D44 Auctions	D44 Аукционы
D45 Rationing • Licensing	D45 Нормирование • Лицензирование
D46 Value Theory	D46 Теория стоимости
D47 Market Design	D47 Дизайн рынка
D49 Other	D49 Прочее

Code and Name of JEL Subject Category	Код и наименование категории JEL
D5 General Equilibrium and Disequilibrium	D5 Общее равновесие и его нарушение
D50 General	D50 Общее
D51 Exchange and Production Economies	D51 Экономии обмена и производства
D52 Incomplete Markets	D52 Несовершенные рынки
D53 Financial Markets	D53 Финансовые рынки
D57 Input–Output Tables and Analysis	D57 Таблицы «Затраты–выпуск» и анализ
D58 Computable and Other Applied General Equilibrium Models	D58 Вычисляемые и другие прикладные модели общего равновесия
D59 Other	D59 Прочее
D6 Welfare Economics	D6 Экономика благосостояния
D60 General	D60 Общее
D61 Allocative Efficiency • Cost–Benefit Analysis	D61 Распределенная эффективность • Анализ «Затраты–выгода»
D62 Externalities	D62 Экстерналии
D63 Equity, Justice, Inequality, and Other Normative Criteria and Measurement	D63 Равенство, справедливость, неравенство и другие нормативные критерии и измерения
D64 Altruism • Philanthropy	D64 Альтруизм • Филантропия
D69 Other	D69 Прочее
D7 Analysis of Collective Decision-Making	D7 Анализ коллективного принятия решений
D70 General	D70 Общее
D71 Social Choice • Clubs • Committees • Associations	D71 Социальный выбор • Клубы • Комитеты • Ассоциации
D72 Political Processes: Rent-Seeking, Lobbying, Elections, Legislatures, and Voting Behavior	D72 Политические процессы: поиски ренты, лоббирование, выборы, законодательные органы и поведение при голосовании
D73 Bureaucracy • Administrative Processes in Public Organizations • Corruption	D73 Бюрократия • Административные процессы в общественных организациях • Коррупция
D74 Conflict • Conflict Resolution • Alliances	D74 Конфликт • Разрешение конфликта • Альянсы
D78 Positive Analysis of Policy Formulation and Implementation	D78 Позитивный анализ формирования и осуществления политики
D79 Other	D79 Прочее
D8 Information, Knowledge, and Uncertainty	D8 Информация, знания и неопределенность
D80 General	D80 Общее
D81 Criteria for Decision-Making under Risk and Uncertainty	D81 Критерии для принятия решения в условиях риска и неопределенности
D82 Asymmetric and Private Information • Mechanism Design	D82 Асимметричная и частная информация; дизайн механизмов
D83 Search • Learning • Information and Knowledge • Communication • Belief	D83 Поиск • Обучение • Информация и знания • Коммуникация • Вера
D84 Expectations • Speculations	D84 Ожидания • Предположения
D85 Network Formation and Analysis: Theory	D85 Формирование сетей и анализ: теория
D86 Economics of Contract: Theory	D86 Контрактная экономика: теория
D87 Neuroeconomics	D87 Нейроэкономика
D89 Other	D89 Прочее
D9 Intertemporal Choice	D9 Межвременной выбор
D90 General	D90 Общее
D91 Intertemporal Household Choice • Life Cycle Models and Saving	D91 Межвременной выбор домашнего хозяйства • Модели жизненного цикла и сбережений
D92 Intertemporal Firm Choice, Investment, Capacity, and Financing	D92 Межвременной выбор фирмы: инвестиции, мощность и финансирование
D99 Other	D99 Прочее
E Macroeconomics and Monetary Economics	E Макроэкономика и монетарная экономика
E0 General for Macro Category E	E0 Общее для макрокатегории E

Appendix D. Dynamic Frequency Dictionary of EconLit Terms according to JEL Codes (Example)¹Приложение D. Динамический частотный словарь терминов EconLit по кодам JEL (пример)²

“Money Supply” in the Titles of Publications

The First Publication in EconLit with Word-combination “money supply” in the Title:

Первая публикация в EconLit со словосочетанием “money supply” (денежная масса, предложение денег) в названии:

Nettels, C. 1931. "British policy and colonial money supply." *Economic History Review*, 3(0): 219-45.

The label “MoS” marks the tables in usual forms of “Atlas of New Research based on EconLit” that reflect the publications in EconLit with word combination “money supply” in the titles within 1991–2015, and corresponding frequencies according to JEL codes. — Помета “MoS” включена в заглавия типовых таблиц издания “Атлас новых исследований на основе EconLit” для отражения частоты словоупотреблений термина “money supply” (глобализация) в названиях публикаций в 1991–2013 гг.

Table MoS.0 The Dynamics of Records in EconLit with the Word-combination “money supply” in the Title in 1991–2015 —
— Динамика записей в EconLit, содержащих в названии словосочетание “money supply” в 1991–2015 гг.

Year	1991	1992	1993	1994	1995	S91-95

Year	DE	Title and Abstract
2006		
2006	F21	Panagopoulos, Yannis, and Aristotelis Spiliotis. 2006. "Testing Money Supply Endogeneity: The Case of Greece (1975-1998)." <i>European Research Studies</i> , 9(1-2): 85-102. The main purpose of this paper is to trace whether, for a prolonged period of time (1975-1998), money supply in Greece was endogenously or exogenously determined. In the theoretical part, we briefly report the Orthodox vis-a-vis the post Keynesian views on the issue. From the statistical evidence we conclude that: a) the deregulation process of the late 80s did not produce any structural break in the Greek monetary aggregates and b) under specific assumptions, money in Greece can be considered as endogenously determined. This implies that in the Greek monetary system the central bank behaves as a lender of last resort.
2007		
2007	J22	Itaya, Jun-ichi, and Kazuo Mino. 2007. "Technology, Preference Structure, and the Growth Effect of Money Supply." <i>Macroeconomic Dynamics</i> , 11(5): 589-612. This paper studies the growth effect of money supply in the presence of increasing returns and endogenous labor supply. By using a simple model of endogenous growth with a cash-in-advance constraint, it is shown that the growth effect of money supply depends on the specifications of preference structures as well as of the production technology. Either if the production technology exhibits strong nonconvexity or if the utility function has a high elasticity of intertemporal substitution, then there may exist dual balanced-growth equilibria and the impact of a change in money growth depends on which steady state is realized in the long run. It is also shown that there is no systematic relationship between the growth effect of money supply and local determinacy of the balanced growth path.
2008		
2008	H26 J11 K42	CV: Cagan, Phillip. 2008. "The Demand for Currency Relative to the Total Money Supply." In <i>The Economics of the Hidden Economy. Volume 1.</i> , ed. Friedrich Schneider, 123-48. Elgar Reference Collection. International Library of Critical Writings in Economics, vol. 227. Cheltenham, U.K. and Northampton, Mass.: Elgar.
2008	L11	Hossain, Akhand Akhtar. 2008. "Responses of Agricultural Prices, Industrial Prices and the Agricultural Terms of Trade to Money Supply Shocks in Bangladesh, 1973M1-2006M6." <i>Indian Economic Review</i> , 43(2): 287-316. This paper investigates the long-run relationship between money supply, agricultural prices, and industrial prices and tests for the proposition that agricultural prices respond to monetary shocks more rapidly than industrial prices and therefore monetary policy may affect the agricultural terms of trade in the short-run, if not in the long-run. The long-run relationship between money supply, agricultural prices, and industrial prices is investigated by the Engle-Ganger approach, the Johansen approach and the autoregressive distributed lag bounds testing approach. The cointegration and error-correction tests results suggest that there exists a cointegral relationship between money supply, agricultural prices and industrial prices. The results obtained by the bounds testing approach are not consistent with the monetary neutrality proposition. The Wald test results suggest that the long-run coefficient on the money stock (narrow or broad) in the sectoral or the general price level relationship is significantly lower than one. The long-run coefficient on the money stock (narrow or broad) in the agricultural price relationship is also higher than that in the industrial price relationship, implying that an increase in the money supply has a long-run positive effect on the agricultural terms of trade. Finally, the Granger (predictive) causality test results and the impulse response analysis within a 3-variable vector error-correction modeling framework suggest that agricultural prices respond to monetary shocks more rapidly than industrial prices, implying that monetary shocks have a short run positive impact on the agricultural terms of trade.
2008	L16 O14 P23 P34	Li, Zhiguo. 2008. "Money Demand Elasticity, Effective Money Supply and Money Market Disequilibrium: "China's Puzzle" and Long-Term Excessive Liquidity." <i>Frontiers of Economics in China</i> , 3(2): 209-22. Chinese excessive liquidity problems are more serious than other main countries. The upgrading industrial structure and the increasing opening degree lead to the excessive money demand and higher money demand elasticity. Bad credits weaken money supply effectiveness and lead to illusive increasing money. We set up the money market disequilibrium model under the condition of the excessive liquidity. The imbalance between money demand and money supply is the key of Chinese excessive liquidity problems.
2009		
2009	F14	Gedeon, Shirley J. 2009. "Money Supply Endogeneity under a Currency Board Regime: The Case of Bosnia and Herzegovina." <i>Journal of Post Keynesian Economics</i> , 32(1): 97-114. A currency board is a monetary regime based on an explicit commitment to exchange domestic currency for a specified foreign currency at a fixed exchange rate. Currency boards are thought to exhibit properties of money supply endogeneity and monetary self-regulation, eliminating the need for discretionary monetary policy. This paper offers a theoretical and institutional explanation why, under the strict currency board regime in Bosnia and Herzegovina, it is possible to observe credit expansion in the presence of persistent trade deficits. It explains how the lender of last resort function is reestablished through private discount window arrangements between domestic and foreign parent banks, illustrating a de facto privatization and decentralization of monetary policy.
2010		
2010	C82	Lazaretou, Sophia. 2010. "Money Supply and Greek Historical Monetary Statistics: Definition, Construction, Sources and Data." <i>Economies et Societes</i> , 44(1): 47-68. This paper attempts to provide, for the first time, a survey of the construction of estimates of the quantity of money in Greece since the inception of the National Bank of Greece in 1842 until the eve of WWII. Specifically, we describe in detail the methods of construction and the sources of data used in building these aggregates. We discuss the data collection procedure and publication practices. The end product is presented in a data appendix.
2011		
2011	C53	Agrawal, Gaurav, and Rohit Shukla. 2011. "Interdependency and Forecasting of Money Supply and Interest Rate (A Vector Auto Regression Model Approach)." <i>Middle Eastern Finance and Economics</i> , 0(14): 44-53. This paper investigates the causal

Year	DE	Title and Abstract
		relationship as well as the degree of interdependency between money supply and interest rate and it captures the forecasting model for money supply and interest rate for the period December, 1992 to June, 2010 using weekly data. Money supply and interest rate are not normally distributed. Interest rate and money supply both are found to be non-stationary at level and stationary at first difference. Correlation between money supply and interest rate was found to be very weak, though it cannot be ignored entirely. Further we found that neither interest rate Granger causes money supply nor money supply Granger causes interest rate. Variance decomposition determined the short term causal relationship which reveals that there was only positive unidirectional causality from interest rate to money supply. Further with vector auto regression, forecasting model for money supply and interest rate are given.
2011	C58 G23	Caginalp, G., and M. Desantis. 2011. "Stock Price Dynamics: Nonlinear Trend, Volume, Volatility, Resistance and Money Supply." <i>Quantitative Finance</i> , 11(6): 849-61. We present a methodology to study a data set of 119,260 daily closed-end fund prices using mixed-effects regressions with the objective of understanding price dynamics. There is strong statistical support that relative price change depends significantly on (i) the recent trend in a nonlinear manner, (ii) recent changes in valuation, (iii) recent changes in money supply (M2), (iv) longer-term trend, (v) recent volume changes, and (vi) proximity to a recent high price. The dependence on the volatility is more subtle, as short-term volatility has a positive influence, while the longer term is negative. The cubic nonlinearity in the weighted price trend shows that a percentage daily gain of up to 2.78% tends to yield higher prices, but larger gains lead to lower prices. Thus, the nonlinearity of price trend establishes an empirical and quantitative basis for both underreaction and overreaction within one large data set, facilitating an understanding of these competing motivations in markets. Increasing money supply is found to have a significant positive effect on stock price, while proximity to recent high prices has a negative effect. The data set consists of daily prices during the period 26 October 1998 to 30 January 2008.
2011	L25	Badarudin, Z. E., M. Ariff, and A. M. Khalid. 2011. "Money Supply Endogeneity and Bank Stock Returns." <i>Applied Financial Economics</i> , 21(13-15): 1035-48. This article presents results of tests on two related hypotheses on money supply. The first relates to an unresolved issue of money endogeneity while the second centres on the yet-explored relationship between money supply and bank stock returns if money is found to be endogenous. Our results, using long-horizon data of Group of Seven (G-7) economies, supports causality in money supply as running from bank lending to bank deposits, a result that is predicted by the post-Keynesian money supply endogeneity (bank-credit-driven) theory. Thus, the result is not consistent with exogeneity proposition. A new evidence of positive relationship between endogenous money supply and aggregate bank stock return is statistically significant on this hitherto unexplored topic. These findings are consistent with the post-Keynesian money supply theory and the dividend valuation theory, which predicts money supply changes to induce changes in bank earnings, so bank share prices change.
2011	L61 N53	Allen, Martin. 2011. "Silver Production and the Money Supply in England and Wales, 1086-c. 1500." <i>Economic History Review</i> , 64(1): 114-31. The contribution of English and Welsh lead mines to the silver supplies of mints between Domesday Book and the end of the fifteenth century is assessed in this article, comparing evidence for the size of silver production with mint output data. It is shown that the proposal that northern Pennine mines were the principal source of the silver in the late twelfth-century English currency is untenable. Welsh mines supplied limited amounts of silver to local mints around 1200. Devon silver made a significant but not predominant contribution to mint output at times of bullion scarcity in the 1290s and the mid-fifteenth century. Imported silver was usually a greater source of the metal in the English currency than locally mined silver, and gold coins constituted most of England's money supply from the mid-fourteenth century onwards.
2012		
2012	B12 D61 F11	Grubb, Farley. 2012. <i>Chronic Specie Scarcity and Efficient Barter: The Problem of Maintaining an Outside Money Supply in British Colonial America</i> . National Bureau of Economic Research, Inc, NBER Working Papers: 18099. Colonial Americans complained that gold and silver coins (specie) were chronically scarce. These coins could be acquired only through importation. Given unrestricted trade in specie, market arbitrage should have eliminated chronic scarcity. A model of efficient barter and local inside money is developed to show how chronic specie scarcity in colonial America could prevail despite unrestricted specie-market arbitrage, thus justifying colonial complaints. The creation of inside fiat paper monies by colonial governments was a welfare-enhancing response to preexisting chronic specie scarcity, not the cause of that scarcity.
2012	C44	Wingrove, Rodney C., and Ronald E. Davis. 2012. "Manual-Control Analysis Applied to the Money Supply Control Task." <i>Computational Economics</i> , 39(1): 99-111. The recent procedure implemented by the Federal Reserve Board to control the money supply is formulated in the form of a tracking model as used in the study of manual-control tasks. Using this model, an analysis is made to determine the effect of monetary control on the fluctuations in economic output. The results indicate that monetary control can reduce the amplitude of fluctuations at frequencies near the region of historic business cycles. However, with significant time lags in the control loop, monetary control tends to increase the amplitude of the fluctuations at the higher frequencies. The study outlines how the investigator or student can use the tools developed in the field of manual-control analysis to study the nature of economic fluctuations and to examine different strategies for stabilization.
2012	D24 G32	Shubik, Martin, and William D. Sudderth. 2012. <i>Cost Innovation: Schumpeter and Equilibrium. Part 2: Innovation and the Money Supply</i> . Cowles Foundation for Research in Economics, Yale University, Cowles Foundation Discussion Papers: 1881. The control structure over money and real assets is considered in the process of cost innovation. The work here contrasts with the first part of this paper where the emphasis was on the physical aspects of innovation. Here the emphasis is primarily on the money supply aspects of innovation. We conclude with observations on evaluation and the locus of control in the process of innovation.

2012	L71 L73	Azar, Samih Antoine. 2012. "Commodity Prices and the US Money Supply in the Long Run." <i>International Journal of Trade and Global Markets</i> , 5(3-4): 316-35. Theoretically commodity prices are expected to overshoot the money supply in the short run but to vary with unit proportionality in the long run. This follows from the observation that consumer prices are sticky and that commodity prices, set in auction markets are fully flexible. There is empirical evidence in the literature that commodity indexes are indeed anchored in the long run to the money supply with unit proportionality. However there is a dearth of research on the

Year	DE	Title and Abstract
		long-run behaviour of individual commodities with respect to the money supply. This paper fills this gap in the literature. When 48 individual commodity series and six commodity indexes series are studied over the monthly period 1980/2011, there is fairly strong evidence for unit proportionality to money supply. Individual regressions and panel regressions are both supportive of unit proportionality. The preconception that commodity prices move haphazardly is hence rejected.

2013		
2013	G01	Robinson, Richard, and Marwan El Nasser. 2013. "Decomposing US Money Supply Changes since the Financial Crisis." <i>International Journal of Financial Studies</i> , 1(1-4): 32-44. In response to the financial crisis of 2008, the Federal Reserve radically increased the monetary base. Banks responded by increasing excess reserves rather than increasing bank loans, and the public responded with a substantial flight to liquidity in the form of currency and demand deposits. As a result, the money-supply multipliers substantially decreased, so that the actual money supply measures grew more moderately than the base. The sustained multiplier-collapse spawned reexamination of monetary versus fiscal theories of price-level determination. This paper, however, presents decompositions of the money-multiplier collapse into changes in the currency-to-deposit ratios, and changes in the reserve-to-deposit ratio. By doing so, possible near-term increases in the multipliers are simulated so that the possibility of either full or partial restoration to their pre-crisis levels is assessed. Policy possibilities for controlling the money supply over various horizons follow. This analysis illustrates the Federal Reserve's exit dilemma that results from its financial-crisis policy.
2014		
2014	C73	Shubik, Martin, and Eric Smith. 2014. <i>Varying the Money Supply of Commercial Banks</i> . Cowles Foundation for Research in Economics, Yale University, Cowles Foundation Discussion Papers: 1939. We consider the problem of financing two productive sectors in an economy through bank loans, when the sectors may experience independent demands for money but when it is desirable for each to maintain an independently determined sequence of prices. An idealized central bank is compared with a collection of commercial banks that generate profits from interest rate spreads and flow those through to a collection of consumer/owners who are also one group of borrowers and lenders in the private economy. We model the private economy as one in which both production functions and consumption preferences for the two goods are independent, and in which one production process experiences a shock in the demand for money arising from an opportunity for risky innovation of its production function. An idealized, profitless central bank can decouple the sectors, but for-profit commercial banks inherently propagate shocks in money demand in one sector into price shocks with a tail of distorted prices in the other sector. The connection of profits with efficiency-reducing propagation of shocks is mechanical in character, in that it does not depend on the particular way profits are used strategically within the banking system. In application, the tension between profits and reserve requirements is essential to enabling but also controlling the distributed perception and evaluation services provided by commercial banks. We regard the inefficiency inherent in the profit system as a source of costs that are paid for distributed perception and control in economies.
2014	E14	Jedruchniewicz, Andrzej. 2014. "Money Supply as the Target of the Central Bank." <i>Folia Oeconomica Stetinensia</i> , 14(22): 116-36. The main purpose of the article is a critical analysis of the monetary policy strategy that is based on the adoption of money supply as an intermediate target. The analysis is conducted from the perspective of the theory of the Austrian school. The first part of the article presents an influence of the supply of money on changes of categories in economy according to mainstream theories of economics. The second part discusses the essence of the strategy of monetary policy using money supply as an intermediate target from the point of view of the main trend in economics. It is demonstrated that in order to use it, two elementary conditions must be met: the function of demand for money must be at least relatively stable and the central bank must practically shape changes in the money supply at the planned level. The third part is of key importance for the purpose of this article. It involves the criticism of Friedman's principle, i.e., a constant increase in money supply as a monetary strategy. According to the Austrian theory, an increase in the quantity of money which is not financed by voluntary savings separates the time structure of production and consumption. Thus, after the period of prosperity there a collapse in production must take place. It is also pointed out that the crisis can be postponed only when the quantity of money increases at an ever faster rate.
2014	F62	Choi, Yong-Yil. 2014. "Lax Money Supply under Globalization and Detecting an Early Sign to Anticipate Deep Recession." <i>Applied Economics</i> , 46(25-27): 3193-3201. This article uncovers a macroeconomic threshold for avoiding deep recession under globalization. The analysis shows that there is a long-run natural rate of substitution between the broadest measure of money balances and nominal government spending, namely the natural fiscal velocity. Applying this threshold to the actual economy can give us two benefits: first, comparing the actual rate of substitution between the broadest measure of money balances and nominal government spending with the natural fiscal velocity can provide an early sign to anticipate deep recession under globalization. Second, controlling the actual fiscal velocity so as not to exceed the natural one is such a macro calibration that the authorities can easily justify their pre-emptive actions as a means of avoiding a deep recession trap under globalization.
2014	R52 R58	Gonzalez, Camilo, Luisa Silva, Carmina Vargas, and Andres M. Velasco. 2014. "Uncertainty in the Money Supply Mechanism and Interbank Markets in Colombia." <i>Ensayos sobre Politica Economica</i> , 32(73): 36-49. We set a dynamic stochastic model for the interbank daily market for funds in Colombia. The framework features exogenous reserve requirements and requirement period, competitive trading among heterogeneous commercial banks, daily open market operations held by the Central Bank (auctions and window facilities), and idiosyncratic demand shocks and uncertainty in the daily auction. Analytical derivations of their decision making process show that banks involvement in the interbank market and open market operations depend on their individual requirement constraint and daily liquid assets. Our results do not show a linkage between the uncertainty in the money supply mechanism and activity in the interbank market. Equilibrium interest rate for the interbank market is derived, and is shown that it is distorted by uncertainty at the daily auction held by the monetary authority. Using data for Colombia, we test the main results of the model and corroborate the Martingale hypothesis for the interbank interest rate.
2015		
2015	F13 H87	Nakamura, Yasushi. 2015. "Money Supply and Foreign-Trade Taxes in the Soviet Union: An International Comparison Using New Soviet Data." <i>Journal of European Economic History</i> , 44(1): 85-120. This study examines quantitatively the relationship between special foreign-trade earnings (SFEs), which effectively represent import and export taxes, and money supply in the Soviet Union. The Soviet SFEs, as well as foreign trade taxes in market economies, can be decomposed into change in money

Year	DE	Title and Abstract
		supply and redistribution of domestic funds. A change in money supply alters the net amount of available funds, whereas redistribution of funds does not. The decomposition demonstrated that redistribution accounted for about 90% of SFEs, which generated 7% to 15% of state budget revenue in the 1970s and 1980s. Thus, less than one-tenth of SFEs corresponded to net changes in domestic funds. Thus, the SFEs mechanism is not an instrument of fiscal revenue, but a by-product of comprehensive price control. The size of SFEs indicated the magnitude of price distortion, rather than the financial benefits from foreign trade. We need more data on foreign economic activities, in particular Soviet balance of payments data, to further investigate the relation between the Soviet domestic financial economy and foreign economic activities. Hopefully, the data will be discovered in Soviet archives.
2015	N15 N35	CV: Peng, Kaixiang. 2015. "Money Supply and the Price Mechanism: The Interaction of Money, Prices and Wages in Beijing in the Long Nineteenth Century." In <i>A History of Market Performance: From Ancient Babylonia to the Modern World</i> , ed. R. J. Van der Spek, Bas Van Leeuwen and Jan Luiten Van Zanden, 442-69. Routledge Explorations in Economic History series, vol. 68. London and New York: Taylor and Francis, Routledge.
2015	N22	Gentle, Paul F., and Joseph Jones. 2015. "Reflections Concerning the Money Supply, Velocity, and the Quantity Theory of Money: The Great Depression and the Great Recession in the United States." <i>Banks and Bank Systems</i> , 10(2): 72-82. The Great Depression, as it manifested itself in the United States of America, was caused by different factors, including both levels of the money supply and the velocity of money. There were also other factors worsening the Great Depression, including the Smoot-Hawley Tariff and banking deregulation, the latter also being a causal factor in the Great Recession. These factors and more are examined in this paper. The paper concludes that economists are best served by examining different schools of economic thought concerning these two economic downturns. Also, the quantity theory of money, as it relates to the money supply and velocity are worthy of the attention of economists, in order to understand other time periods of economic history.

Общий объем приложения D — 2,27 авторских (уч.-изд.) л.

³ AS — Author's Sheet — unit of measuring the volume of a literary work; equal to 40.000 characters (including the spaces between words) or 3.000 sq cm of illustrations (maps) like the table MoS.E.

Appendix E1. Series Editorial Board

This appendix contains brief information about members of the series editorial board. We used the following abbreviations:

RAS — Russian Academy of Sciences (SB — Siberian Branch, UB — Ural Branch),
MRI — Main Research Interests according to macro categories of JEL subject classification.

Victor I. Suslov (Суслов, Виктор Иванович) — *Chairman of the Editorial Board*, D. Sc. (Economics), Professor, Corresponding Member of the RAS, Deputy Director of the Institute of Economics and Industrial Engineering SB RAS, Professor in the Faculty of Economics at the Novosibirsk State University, Deputy Editor-in-Chief of the scientific journal “Region: Economics and Sociology”. (Novosibirsk, Russian Federation).

MRI: C Mathematical and Quantitative Methods. **G** Financial Economics. **O** Economic Development, Technological Change, and Growth. **R** Urban, Rural, Regional, Real Estate, and Transportation Economics.

Gagik M. Mkrtchyan (Мкртчян, Гагик Мкртчичевич) — *Deputy Chairman of the Editorial Board*, D. Sc. (Economics), Professor, Honored Professor of the Russian Federation, President of the Faculty of Economics and Head of the Chair of Mathematical Methods for Economics and Planning at the Novosibirsk State University, Chief Research Fellow at the Institute of Economics and Industrial Engineering SB RAS, Editor-in-Chief of the scientific journal “World of Economics and Management” (previous title – Vestnik NSU. Series: Social and Economics Sciences) published by the Novosibirsk State University. (Novosibirsk, Russian Federation).

MRI: A General Economics and Teaching. **C** Mathematical and Quantitative Methods. **I** Health, Education, and Welfare. **M** Business Administration and Business Economics • Marketing • Accounting. **P** Economic Systems. **Q** Agricultural and Natural Resource Economics • Environmental and Ecological Economics.

Mikhail V. Lychagin (Лычагин, Михаил Васильевич) — *Editor-in-Chief*, D. Sc. (Economics), Professor, Honored Professor of the Russian Federation, Head of the Chair of Finance and Credit in the Faculty of Economics at the Novosibirsk State University, Leading Research Fellow at the Institute of Economics and Industrial Engineering SB RAS. (Novosibirsk, Russian Federation).

MRI: A General Economics and Teaching. **F** International Economic. **G** Financial Economics. **I** Health, Education, and Welfare. **J** Labor and Demographic Economics. **L** Industrial Organization. **M** Business Administration and Business Economics • Marketing • Accounting. **O** Economic Development, Technological Change, and Growth. **Z** Other Special Topics.

Alexander O. Baranov (Баранов, Александр Олегович) — D. Sc. (Economics), Professor, Head of the Chair of Economic Theory in the Faculty of Economics at the Novosibirsk State University, Leading Research Fellow at the Institute of Economics and Industrial Engineering SB RAS, Deputy Editor-in-Chief of the scientific journal “World of Economics and Management”. (Novosibirsk, Russian Federation).

MRI: E Macroeconomics and Monetary Economics. **O** Economic Development, Technological Change, and Growth. **P** Economic Systems.

Lidiya P. Bufetova (Буфетова, Лидия Павловна) — D. Sc. (Economics), Professor, Professor in the Faculty of Economics at the Novosibirsk State University, Editor-in-Chief of the journal “Economy. Issues of School Economic Education”. (Novosibirsk, Russian Federation).

MRI: A General Economics and Teaching. **D** Microeconomics. **J** Labor and Demographic Economics. **N** Economic History. **P** Economic Systems.

Igor N. Dubina (Дубина, Игорь Николаевич) — D. Sc. (Economics), Professor in the Faculty of Economics at the Novosibirsk State University and Professor in the Institute of Economics, Management and Information Systems at Altai State University, Associate Editor of the “Journal of the Knowledge Economy” and the “Journal of Innovation and Entrepreneurship” (Springer). (Novosibirsk, Russian Federation).

MRI: C Mathematical and Quantitative Methods. **O** Economic Development, Innovation, Technological Change, and Growth.

Konstantin P. Gluschenko (Глущенко, Константин Павлович) — D. Sc. (Economics), Leading Research Fellow at the Institute of Economics and Industrial Engineering SB RAS, Professor in the Faculty of Economics at the Novosibirsk State University. (Novosibirsk, Russian Federation).

MRI: C Mathematical and Quantitative Methods. **D** Microeconomics. **E** Macroeconomics and Monetary Economics. **R** Urban, Rural, Regional, Real Estate, and Transportation Economics.

Alexandr B. Khutoretskii (Хуторецкий, Александр Борисович) — D. Sc. (Economics), Professor in the Faculty of Economics at the Novosibirsk State University. (Novosibirsk, Russian Federation).

MRI: C Mathematical and Quantitative Methods. **H** Public Economics.

Vladimir I. Klistorin (Клисторин, Владимир Ильич) — D. Sc. (Economics), Professor, Leading Research Fellow at the Institute of Economics and Industrial Engineering SB RAS, Professor in the Faculty of Economics at the Novosibirsk State University. (Novosibirsk, Russian Federation).

MRI: B History of Economic Thought, Methodology, and Heterodox Approaches. **H** Public Economics. **R** Urban, Rural, Regional, Real Estate, and Transportation Economics.

Igor V. Kudin (Кудин, Игорь Валерьевич) — PhD (Can. Sc., Economics), Chairman of the Board in the Novosibirsk City Public Organization “Our Health” (Novosibirsk, Russian Federation).

MRI: I Health, Education, and Welfare. **L** Industrial Organization. **M** Business Administration and Business Economics • Marketing • Accounting.

Valerii N. Lisitsa (Лисица, Валерий Николаевич) — D. Sc. (Law), Docent, Head of the Chair of Law in the Faculty of Economics at the Novosibirsk State University. (Novosibirsk, Russian Federation).

MRI: K Law and Economics.

Anton M. Lychagin (Лычагин, Антон Михайлович) — PhD (Can. Sc., Economics), Docent, Director of the Autonomous Nonprofit Organization “The Institute of Applied Projects”, Chairman of the General Meeting in the Fund “TIME” (the Fund for Implementation of the community initiatives). (Moscow, Russian Federation).

MRI: G Financial Economics. **K** Law and Economics. **L** Industrial Organization. **M** Business Administration and Business Economics • Marketing • Accounting. **O** Economic Development, Technological Change, and Growth.

Irina K. Muhina (Мухина, Ирина Константиновна) — PhD (Can. Sc., Physics & Mathematics), Big Data & AI Strategist, Analytical Consultant & Knowledge Architect with 25 years of practical and leadership experience in investment, banking, consulting, insurance, and research of North American corporations, Founder of Innovative Educational Center of Art and Science iECARUS.com, (Russian Federation and Canada).

MRI: A General Economics and Teaching. **C** Mathematical and Quantitative Methods. **F** International Economics. **G** Financial Economics.

Alexander V. Novikov (Новиков, Александр Владимирович) — D. Sc. (Economics), Professor, Rector of the Novosibirsk State University of Economics and Management. (Novosibirsk, Russian Federation).

MRI: A General Economics and Teaching. **G** Financial Economics.

Tatyana S. Novikova (Новикова, Татьяна Сергеевна) — D. Sc. (Economics), Professor, Professor in the Faculty of Economics at the Novosibirsk State University, Leading Research Fellow at the Institute of Economics and Industrial Engineering SB RAS. (Novosibirsk, Russian Federation).

MRI: F International Economics. **G** Financial Economics. **H** Public Economics. **O** Economic Development, Technological Change, and Growth.

Eugene V. Popov (Попов, Евгений Васильевич) — D. Sc. (Economics; Physics & Mathematics), Professor, Corresponding Member of the RAS, Honored scientist of the Russian Federation, Chief Scientific Secretary, Ural Branch of the Russian Academy of Sciences (UB RAS), Head of the Economical Theory Department at the Institute of Economics UB RAS, Deputy Editor-in-Chief of the “Russian Journal of Economic Theory”, Member of the Editorial Board of the “Advances in Economics and Business” (USA). (Yekaterinburg, Russian Federation).

MRI: **A** General Economics and Teaching. **B** History of Economic Thought, Methodology, and Heterodox Approaches. **L** Industrial Organization. **M** Business Administration and Business Economics • Marketing • Accounting.

Nikita I. Suslov (Суслов, Никита Иванович) — D. Sc. (Economics), Professor, Head of Department of Analysis and Forecasting the Development of Industrial Systems at the Institute of Economics and Industrial Engineering SB RAS, Professor in the Faculty of Economics at the Novosibirsk State University. (Novosibirsk, Russian Federation).

MRI: **E** Macroeconomics and Monetary Economics. **L** Industrial Organization.

Sergey A. Suspitsyn (Суспицын, Сергей Алексеевич) — D. Sc. (Economics), Professor, Honored scientist of the Russian Federation, Chief Research Fellow at the Institute of Economics and Industrial Engineering SB RAS. (Novosibirsk, Russian Federation).

MRI: **C** Mathematical and Quantitative Methods. **R** Urban, Rural, Regional, Real Estate, and Transportation Economics.

Tatiana O. Tagaeva (Тагаева, Татьяна Олеговна) — D. Sc. (Economics), Docent, Leading Research Fellow at the Institute of Economics and Industrial Engineering SB RAS, Professor in the Faculty of Economics at the Novosibirsk State University. (Novosibirsk, Russian Federation).

MRI: **E** Macroeconomics and Monetary Economics. **Q** Agricultural and Natural Resource Economics • Environmental and Ecological Economics.

Valentin P. Taratuta (Таратута, Валентин Петрович) — PhD (Can. Sc., Philosophy), Docent, Associate Professor in the Institute for the Philosophy and Law at the Novosibirsk State University. (Novosibirsk, Russian Federation).

MRI: **A** General Economics and Teaching. **B** History of Economic Thought, Methodology, and Heterodox Approaches.

Vladislav V. Titov (Титов, Владислав Владимирович) — D. Sc. (Economics), Professor, Chief Research Fellow at the Institute of Economics and Industrial Engineering SB RAS, Head of the Chair of Modelling and Management of Industrial Production in the Faculty of Economics at the Novosibirsk State University. (Novosibirsk, Russian Federation).

MRI: **C** Mathematical and Quantitative Methods. **L** Industrial Organization. **M** Business Administration and Business Economics • Marketing • Accounting.

Miron A. Yagolnitser (Ягольницер, Мирон Аркадьевич) — PhD (Can. Sc., Economics), Leading Research Fellow at the Institute of Economics and Industrial Engineering SB RAS. (Novosibirsk, Russian Federation).

MRI: **C** Mathematical and Quantitative Methods. **L** Industrial Organization.

The date of verification: November 22, 2017.

Приложение Е2. Редакционный совет серии

В приложении приводится краткая информация о членах редакционного совета серии книг “Инновационный библиометрический анализ в экономических исследованиях” с указанием основных исследовательских интересов (**ОИИ**) согласно предметной классификации JEL.

Суслов, Виктор Иванович (Victor I. Suslov) — *председатель редакционного совета*, доктор экономических наук, профессор, член-корреспондент РАН, заместитель директора по науке Института экономики и организации производства СО РАН, профессор экономического факультета Новосибирского национального исследовательского государственного университета, зам. главного редактора Всероссийского научного журнала “Регион: экономика и социология”. (РФ, Новосибирск).

ОИИ: С Математические и количественные методы. **Г** Финансовая экономика. **О** Экономическое развитие, технологические изменения и рост. **Р** Экономика города, села, регионов, недвижимости и транспорта.

Мкртчян, Гагик Мкртчевич (Gagik M. Mkrtchyan) — *заместитель председателя редакционного совета*, доктор экономических наук, профессор, заслуженный работник высшей школы Российской Федерации, президент экономического факультета и заведующий кафедрой применения математических методов в экономике и планировании Новосибирского национального исследовательского государственного университета, главный научный сотрудник Института экономики и организации производства СО РАН, главный редактор журнала “Мир экономики и управления” (ранее — “Вестник Новосибирского государственного университета. Серия: Социально-экономические науки”). (РФ, Новосибирск).

ОИИ: А Экономикс в целом и обучение. С Математические и количественные методы. **Г** Здоровье, образование и благосостояние. **М** Деловое администрирование и экономика бизнеса, маркетинг, учет. **Р** Экономические системы. **Q** Экономика сельского хозяйства и природных ресурсов, экологическая экономика и экономика окружающей среды.

Лычагин, Михаил Васильевич (Mikhail V. Lychagin) — *главный редактор*, доктор экономических наук, профессор, заслуженный работник высшей школы Российской Федерации, заведующий кафедрой “Финансы и кредит” экономического факультета Новосибирского национального исследовательского государственного университета, ведущий научный сотрудник Института экономики и организации производства СО РАН. (РФ, Новосибирск).

ОИИ: А Экономикс в целом и обучение. **Г** Международная экономика. **Г** Финансовая экономика. **Г** Здоровье, образование и благосостояние. **Ж** Экономика труда и демография. **Л** Отраслевая организация производства. **М** Деловое администрирование и экономика бизнеса, маркетинг, учет. **О** Экономическое развитие, технологические изменения и рост. **З** Другие специальные темы (экономика культуры, экономическая социология, экономическая антропология, религия).

Баранов, Александр Олегович (Alexander O. Baranov) — доктор экономических наук, профессор, заведующий кафедрой экономической теории экономического факультета Новосибирского национального исследовательского государственного университета, ведущий научный сотрудник Института экономики и организации производства СО РАН, зам. главного редактора журнала “Мир экономики и управления” (ранее — “Вестник Новосибирского государственного университета. Серия: Социально-экономические науки”). (РФ, Новосибирск).

ОИИ: Е Макроэкономика и монетарная экономика. **О** Экономическое развитие, технологические изменения и рост. **Р** Экономические системы.

Буфетова, Лидия Павловна (Lidiya P. Bufetova) — доктор экономических наук, профессор, профессор экономического факультета Новосибирского национального исследовательского государственного университета, главный редактор журнала “Экономика. Вопросы школьного экономического образования”. (РФ, Новосибирск).

ОИИ: А Экономикс в целом и обучение. **Д** Микроэкономика. **Ж** Экономика труда и демография. **Н** Экономическая история. **Р** Экономические системы.

Дубина, Игорь Николаевич (Igor N. Dubina) — доктор экономических наук, профессор экономического факультета Новосибирского национального исследовательского государственного университета и Международного института экономики, менеджмента и информационных систем Алтайского государственного университета, зам. главного редактора международных научных журналов “Экономика знаний” и “Инновации и предпринимательство” (Издательство Springer). (РФ, Новосибирск).

ОИИ: С Математические и количественные методы. **О** Экономическое развитие, инновации, технологические изменения и рост.

Глушенко, Константин Павлович (Konstantin P. Gluschenko) — доктор экономических наук, ведущий научный сотрудник Института экономики и организации производства СО РАН, профессор экономического факультета Новосибирского национального исследовательского государственного университета. (РФ, Новосибирск).

ОИИ: С Математические и количественные методы. **Д** Микроэкономика. **Е** Макроэкономика и монетарная экономика. **Р** Экономика города, села, регионов, недвижимости и транспорта.

Клисторин, Владимир Ильич (Vladimir I. Klistorin) — доктор экономических наук, профессор, ведущий научный сотрудник Института экономики и организации производства СО РАН, профессор экономического факультета Новосибирского национального исследовательского государственного университета. (РФ, Новосибирск).

ОИИ: **В** История экономической мысли, методология и неортодоксальные подходы. **Н** Экономика общественного сектора. **Р** Экономика города, села, регионов, недвижимости и транспорта.

Кудин, Игорь Валерьевич (Igor V. Kudin) — кандидат экономических наук, председатель правления Новосибирской городской общественной организации “Наше здоровье”. (РФ, Новосибирск).

ОИИ: **Г** Здоровье, образование и благосостояние. **Л** Отраслевая организация производства. **М** Деловое администрирование и экономика бизнеса, маркетинг, учет.

Лисица, Валерий Николаевич (Valerii N. Lisitsa) — доктор юридических наук, доцент, заведующий кафедрой правового обеспечения рыночной экономики экономического факультета Новосибирского национального исследовательского государственного университета. (РФ, Новосибирск).

ОИИ: **К** Право и экономика.

Лычагин, Антон Михайлович (Anton M. Lychagin) — кандидат экономических наук, доцент, директор АНО «Институт прикладных проектов», председатель общего собрания Фонда реализации общественных инициатив «ВРЕМЯ». (РФ, Москва).

ОИИ: **Г** Финансовая экономика. **К** Право и экономика. **Л** Отраслевая организация производства. **М** Деловое администрирование и экономика бизнеса, маркетинг, учет. **О** Экономическое развитие, технологические изменения и рост.

Мухина, Ирина Константиновна (Irina K. Muhina) — кандидат физико-математических наук, международный эксперт по проектированию и архитектуре информационно-аналитических потоков с области инвестиций, банков, страхования, консалтинга и исследований корпораций Северной Америки (более 25 практической работы), основатель образовательного инновационного центра iECARUS.com, президент ERUDITE school Erudite.com. (РФ и Канада).

ОИИ: **А** Экономикс в целом и обучение. **С** Математические и количественные методы. **Ф** Международная экономика. **Г** Финансовая экономика.

Новиков, Александр Владимирович (Alexander V. Novikov) — доктор экономических наук, профессор, ректор Новосибирского государственного университета экономики и управления. (РФ, Новосибирск).

ОИИ: **А** Экономикс в целом и обучение. **Г** Финансовая экономика.

Новикова, Татьяна Сергеевна (Tatyana S. Novikova) — доктор экономических наук, профессор, профессор экономического факультета Новосибирского национального исследовательского государственного университета, ведущий научный сотрудник Института экономики и организации производства СО РАН. (РФ, Новосибирск).

ОИИ: F Международная экономика. G Финансовая экономика. H Экономика общественного сектора.

Попов, Евгений Васильевич (Eugene V. Popov) — доктор экономических наук, доктор физико-математических наук, профессор, член-корреспондент РАН, заслуженный деятель науки РФ, главный ученый секретарь Уральского отделения РАН, руководитель Центра экономической теории Института экономики Уральского отделения РАН (Екатеринбург), заместитель главного редактора “Журнала экономической теории”, член редакционного совета журнала “Advances in Economics and Business” (USA). (РФ, Екатеринбург).

ОИИ: A Экономикс в целом и обучение. B История экономической мысли, методология и неортодоксальные подходы. D Микроэкономика. L Отраслевая организация производства. M Деловое администрирование и экономика бизнеса, маркетинг, учет.

Суслов, Никита Иванович (Nikita I. Suslov) — доктор экономических наук, профессор, заведующий отделом анализа и прогнозирования развития отраслевых систем Института экономики и организации производства СО РАН, профессор экономического факультета Новосибирского национального исследовательского государственного университета. (РФ, Новосибирск).

ОИИ: E Макроэкономика и монетарная экономика. L Отраслевая организация производства.

Суспицын, Сергей Алексеевич (Sergey A. Suspitsyn) — доктор экономических наук, профессор, заслуженный деятель науки РФ, главный научный сотрудник Института экономики и организации производства СО РАН. (РФ, Новосибирск).

ОИИ: C Математические и количественные методы. R Экономика города, села, регионов, недвижимости и транспорта.

Тагаева, Татьяна Олеговна (Tatiana O. Tagaeva) — доктор экономических наук, ведущий научный сотрудник Института экономики и организации производства СО РАН, профессор экономического факультета Новосибирского национального исследовательского государственного университета. (РФ, Новосибирск).

ОИИ: E Макроэкономика и монетарная экономика. Q Экономика сельского хозяйства и природных ресурсов, экологическая экономика и экономика окружающей среды.

Таратута, Валентин Петрович (Valentin P. Taratuta) — кандидат философских наук, доцент, доцент Института философии и права Новосибирского национального исследовательского государственного университета. (РФ, Новосибирск).

A Экономикс в целом и обучение. B История экономической мысли, методология и неортодоксальные подходы. (РФ, Новосибирск).

Титов, Владислав Владимирович (Vladislav V. Titov) — доктор экономических наук, профессор, главный научный сотрудник Института экономики и организации производства СО РАН, заведующий кафедрой моделирования и управления промышленным производством экономического факультета Новосибирского национального исследовательского государственного университета.

ОИИ: C Математические и количественные методы. L Отраслевая организация производства. M Деловое администрирование и экономика бизнеса, маркетинг, учет.

Хуторецкий, Александр Борисович (Alexandr B. Khutoretskii) — доктор экономических наук, профессор экономического факультета Новосибирского национального исследовательского государственного университета. (РФ, Новосибирск).

ОИИ: C Математические и количественные методы. H Экономика общественного сектора.

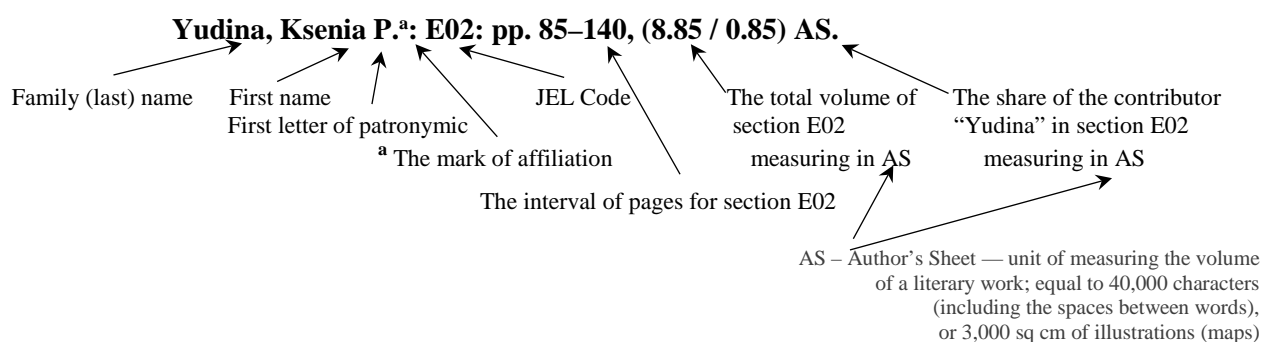

Ягольницер, Мирон Аркадьевич (Miron A. Yagolnitser) — кандидат экономических наук, ведущий научный сотрудник Института экономики и организации производства СО РАН. (РФ, Новосибирск).

ОИИ: C Математические и количественные методы. L Отраслевая организация производства.

Дата верификации: 22 ноября 2017 г.

General Observations — Общие замечания

We use the following form of presentation:

На русском языке используется следующая форма представления:

Согласно сложившейся практике объем литературной и издательской работы измеряется в *авторских листах* (AS — Author’s Sheet). Один такой лист принимается равным 40 000 типографских знаков (включая пробелы между словами), или 3000 кв. см иллюстративного материала (карты, фотографии и т.п.). Ранее в тексте книги в конце каждого раздела с кодом предметной классификации JEL шли сведения об авторском вкладе на английском и русском языках и для обозначения таких авторских листов использовалась аббревиатура AS. Это сокращение будет использоваться и в данном приложении.

If the author participated in the preparation of several sections, then at the end after the word “total” the total amount of AS sections with the author’s participation is indicated first, and then after the slash the sum of AS, which in each section accounted for his share. In cases where sections are listed separately in English and Russian, page intervals and volumes are specified for both types of text. For convenience of perception, we transfer the information to the next line according to the boundaries of sections.

Если автор принял участие в подготовке нескольких разделов, то в конце после слова “итого” указывается сначала общая сумма AS разделов с участием данного автора, а затем после косой черты сумма AS, которые в каждом разделе приходились на его долю. В тех случаях, когда разделы приведены отдельно на английском и русском языках, интервалы страниц и объемы указаны для обоих видов текста. Для удобства восприятия перенос сведений на следующую строку производится не автоматически, а по границам разделов.

General Observations — Общие замечания

We use the following form of presentation:

На русском языке используется следующая форма представления:

Согласно сложившейся практике объем литературной и издательской работы измеряется в *авторских листах* (AS — Author’s Sheet). Один такой лист принимается равным 40 000 типографских знаков (включая пробелы между словами), или 3000 кв. см иллюстративного материала (карты, фотографии и т.п.). Ранее в тексте книги в конце каждого раздела с кодом предметной классификации JEL шли сведения об авторском вкладе на английском и русском языках и для обозначения таких авторских листов использовалась аббревиатура AS. Это сокращение будет использоваться и в данном приложении.

If the author participated in the preparation of several sections, then at the end after the word “total” the total amount of AS sections with the author’s participation is indicated first, and then after the slash the sum of AS, which in each section accounted for his share. In cases where sections are listed separately in English and Russian, page intervals and volumes are specified for both types of text. For convenience of perception, we transfer the information to the next line according to the boundaries of sections.

Если автор принял участие в подготовке нескольких разделов, то в конце после слова “итого” указывается сначала общая сумма AS разделов с участием данного автора, а затем после косой черты сумма AS, которые в каждом разделе приходились на его долю. В тех случаях, когда разделы приведены отдельно на английском и русском языках, интервалы страниц и объемы указаны для обоих видов текста. Для удобства восприятия перенос сведений на следующую строку производится не автоматически, а по границам разделов.
